RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, September 25, 1869.

Stock Exchange and Money Market.

A decidedly more active speculative demand has been reported for money, since our last, and call loans have been quoted higher, or at from 7 per cent. currency, to the very best borrowers, to full 7 per cent. gold, and in some instances an ⅛@¼ of one per cent. commission, to the neediest of the street operators. The available supply of money has been much less extensive. The inquiry for means to move crop products, from the West and South, has been more active, while the local mercantile call for aid has likewise increased. Prime to good discounts have been quoted at from 9@12 per cent. per annum, at which figures, business paper has been moderately dealt in. The city banks, in their last weekly return, show a further loss of nearly 3½ millions of deposits, thus bringing the aggregate down to 185⅜ millions, as against 200¼ millions on the 7th of August, indicating a falling off of nearly 15 millions, in this item. A further slight loss of legal tender notes, and of specie is likewise reported. The legal tender reserve is now 51¼ millions, against 55⅞ millions a fortnight since. The specie hoard is now a little over 14½ millions; on the 17th of July, it stood at over 31 millions. According to the official report made to the Currency Bureau at Washington, the city national banks held, on the 8th of September, the following amounts of specie. Gold coin $2,395,254 50; gold bars, $39,845 78; total, $2,435,100 28. Silver coin, $217,372 51; silver bars, $16,822 82; total, $234,195 38. Gold certificates, $10,296,060. Checks payable in gold, $205,187 24; coupons payable in gold, $48,638 50; other items counted as specie description, $7,413 94. Total, $13,226 595 34. The same banks, according to their reports on the 12th of June last, held: Gold, $5,542,519; gold certificates, $8,593,695. Total, 14,496,214. The general cash balances of the Sub-Treasury have been reduced about ⅝ of a million. The currency reserve of the office on Monday morning, was $8,194,566; on Tuesday, $8,358,436; on Wednesday and Thursday, the Sub-Treasurer was to have disbursed about 3½ millions of currency, on account of purchases of Five-twenties. The Gold speculation operated very decidedly against ease in money, and seriously embarrassed regular trade movements, and the foreign exchange markets, which latter have been unusually depressed and unsettled. The gold speculators serve to make money closer and closer every day to ordinary business by the readiness with which they offer to pay extravagant rates to carry over their balances. The banks, as a rule, decline the operation. They deem it in some instances, if not in all cases, a duty to the business community to discourage the Gold movement, but this only throws the demand on the street in competition with the Stock Exchange and the Bill Brokers. On Wednesday, the market showed most stringency, and extreme rates were exacted of the street borrowers.

The specie reserve of the city banks according to the latest return is $14,558,109, against $14,665,742 same time last year. The city bank deposits are now $185,390,130, against $202,824,583 week ending Sept. 19, 1868. The legal tender reserve amounts to $51,259,197, against $63,772,700 same time last year. The circulation now stands at $33,972,759, against $24,044,693 same time last year. The loans are now $266,496,024, against $271,252 096 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged about $110,403,298 a day, against a daily average of $131,959,000 the preceding week, and $92,814,879 the week ending with Sept. 4, 1869. The current week's exchanges average about $161,000,000 a day. The city banks, last week, reported a further loss of $403,957 of specie, $3,433,194 of deposits, and of $228,670 of legal tender notes. They reduced their loans, $2,368,509; and increased their circulation, $8,563.

The city bank exchanges on Wednesday were $146,608,505.

National Bank notes to the amount of $124,200 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $317,771,446, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $18,061,316, leaving, with the existing 1,620 banks, (having an aggregate capital of $422,659,260,) an actual circulation at this date, of $299,710,130. The United States bonds held by

Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342 500,000; and for the public deposits, $19,518 000—making a total of $362,018,000. The Treasury Department last week redeemed and destroyed $196,400 of worn and mutilated fractional currency, and issued $774,764 of new. The outstanding amount of fractional currency on the 1st of Sept., was $30,711,799 87 against $31,030,300, on the 1st of Aug.

The U. S. Sub-Treasury receipts, week ending with Sept. 18, were $4,946,383 in coin, including $3,139,504 from customs duties, and $4,030,704 in currency; payments, $3,383,132 in coin, including $528,593 of coin interest, and $5,291,348 in currency; balance at the close of the week, $88,264,904, including $77 333,426 of coin, and $8,194,567 of currency, against $88,951,334 at the close of the preceding week, showing a decrease of $686,430. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $760,026 of coin, including $579,652 from customs, and $434,349 of currency; and payments, $52,158 in coin, including $44,000 of coin interest and $270,480 in currency. On Tuesday, receipts, $681,264 in coin, including $469,800 from customs, and $146,836 in currency; and payments $57,124 in coin, including $42,715 of coin interest and $276,425 in currency. The balance at the close of business on Tuesday stood at $89,700,442, (including $8,227,847 of currency, and $78,665,443 of coin,) against $86,287,697 a week previous; and $87,635,084 on Sept. 7, 1869. The aggregate receipts of the office in Aug. were $42,041,140, including $14,319,915 from customs; aggregate payments, $54,599,091, including $18,867,484 of coin interest.

The outstanding amount of coin certificates on the 1st of Sept. was $23,647,580, against $36,725,840 on the 1st of Aug. The Sub-Treasurer at this port, last week, retired $2,920,905 of coin certificates through the receipts for customs.

A falling off in the yielded of the excises to the National Treasury has been noted, since our last. The customs revenue keeps up well. The excises yielded about 3¾ millions; customs at the port of New York, $3,139,504, and at the outports about $1,050,000 (in coin) more, making the grand total income for the week equal to about $9,510,040 in currency. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 45½ millions.

The Gold movements has been practically controlled all the week, by the operators for a rise, and though the dealings have been restricted by the money difficulties, the price has been worked up very steadily. The range has been from 136¼@141⅜, and the closing quotation on Wednesday was 141¼. The short interest has been augmented, thus strengthening the position of the inflationists, who are said to have under their management much of the supply of specie in the open market, or outside of the reserve held at the Sub-Treasury. The city banks report a specie hoard of only some 14½ millions. The Sub Treasury on Wednesday forenoon held a specie balance of 78⅝ millions. The customs revenue of the port exceeds half a million a day; but the export drain is unimportant. Government marketed a million of gold all told on Thursday and Friday of last week at about the going rates. On Wednesday afternoon, the price was suddenly advanced to 141⅜, against further heavy short sales, and the operations were attended by great excitement.

The coin balances of the Government at this port on Wednesday morning, was about 78⅝ millions.

The following is a statement of the business of the New York Gold Exchange Bank for the week ending Saturday September 18th, 1869:

Average am't of loans and discounts	$1,287,448
Average amount of specie	617,073
Average amount of deposits	1,274,628

The customs of the port on Wednesday yielded $541,000. The U. S. Sub-Treasury disbursed $99,711 of coin interest, on that day.

The customs demand for Gold last week, averaged $523,251 a day; thus far, this week, it has averaged $524,726 a day, or equal to a weekly aggregate of $3,148,356. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $8,812, and since Jan. 1, $9,884,124, against $5,749,719 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $97,854,000, against $87,060,193 same time in 1868. At San Francisco, from Jan. 1, to Sept. 10, 1869, $5,737,531, against $5,971,320 same time last year.

The exports of specie, from this port, last week, were $313,119, against $640,390 same week last year; total, since Jan. 1,1869, $25,587,186, against $65,998,946 same time last year. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $528,593, and since Jan. 1, 1869, $68,410,770, against $63,171,733 same time in 1868. The specie exports from San Francisco, from Jan. 1, to Sept. 10, 1869, were $27,080,438, against $28,345,533 same time in 1868.

The U. S. Treasury receipts from customs at all ports from July 1, to Sept. 4, were about 44⅛ millions.

The amount of specie sent east by railroad from San Francisco, thus far, this year, has been $3,121,668.

Foreign exchange has been pressed for sale, and has been further seriously depressed in price, the demand having been very limited. Bankers' prime sixty day bills on London closed heavily and very irregularly on Wednesday at 106⅞@107⅜, and on Paris to 5.30@5.24¼; sight bills on London to 107½@108, and on Paris to 5.25c. @5.21¼. The offering of produce bills has been moderate this week. The week's exports of domestic produce have been to the currency value of $3,752,261 making the total since Jan. 1, 1869, $137,873,202, against $120,294,772 same time last year.

Government securities have been less sought after, and under the adverse influence of the increasing activity in money prices have declined materially. The offerings of bonds have been on a more liberal scale, while there has been less disposition manifested to purchase freely at the ruling figures. There has been little, if any inquiry, from buyers for investment. The mails have been bringing into market considerable amounts of the several issues from country holders, who need money for active employment. The tendency of the market has been toward lower quotations, throughout the list. The large dealers have been practically passive. On Wednesday, the U. S. Sub-Treasurer bought in two millions of U. S. Five-twenties at from 116⅝@117 net, out of an aggregate offering of $7,910,000.

U. S. sixes of 1881 closed here on Wednesday at 120@120½; U. S. Five-twenties of 1862, ex-coupon, 121¾@122; U. S. Five twenties of 1864 at 120@120⅛; U. S. Five-twenties of 1865 at 120½@120¾; U. S. Five-twenties of 1865, consolidated, 118½@118¾; U. S. Five-twenties of 1867, 118¾@119; U. S. Five-twenties of 1868, 118½@118⅝; U. S. Ten-forties at 108½@109, ex-interest; U. S. Six per cent. currency bonds, 108@108½.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	Sept. 8.	Sept. 15.	Sept. 22.

U. S. 5-20s, 1865	82⅝	82⅞	82½
" 1867	81¾	82	81¼
" 10-40s	75¾	75½	75
Erie	23¼	28½	26¼
Ill. Central	94	94½	94¼
At. and Gt. West	....	....	28

The railway and miscellaneous share market has been less active, lower, and very irregular, influenced by the free offering of stocks by the operators for a fall, and by the increasing pressure in the monetary line. On Wednesday, there was an extraordinary pressure to sell, particularly the New York Central, and Hudson River shares, and the former declined 23, and the latter 11@12 per cent. Subsequently, there was a sharp rally, but the market closed very irregularly.

The dealings in domestic produce have been less active, and Breadstuffs, Cotton, and Petroleum have been generally quoted lower, Provisions have been irregular, Pork advancing, while Lard has fallen. Middling upland cotton closed heavily on Wednesday at 28¾@29 cts. per lb. The stock of cotton now here is given at about 3,750 bales. The receipts at the port this week, have averaged about 2,500 bales a day. The receipts at all the ports, thus far in the year commencing with Sept. 1, 1869, have been 56,000 bales, against 47,000 bales in 1868-'8; exports, same time 14,700 bales, against 6,100 bales same time in 1868-'9; stock on hand at latest dates, 34,000 bales, against 47,000 bales same date 1868. The exports of domestic cotton goods from this port, since Jan. 1, have been 16,706 pkgs., against 15,258 pkgs., same time last year. From Boston, 6,189 pkgs., against 6,871 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in fair demand, at from 10@16c., per lb.; week's receipts, 7,135. Milch cows dull, at $40@$110 each, receipts, 119. Veal calves in fair request at from 7@12c. per lb.; receipts, 2,503. Sheep and lambs fairly active at from 4@7c., and 7¼@9¼c. per lb.; receipts, 35,436. Swine dull and rather weak, at 9½@10½c. per lb., all live weight; receipts, 16,220.

In foreign goods, there has been a satisfactory trade reported at generally strong, and in some instances, firmer prices. The week's dry goods imports were valued at $2,519,829, and of general merchandise, $4,168,733, making an aggregate for the week of $6,688,562 specie value, against $5,613,175 same week last year.

Freights have shown more firmness, with a fair degree of activity, chiefly in the line of Cotton, Petroleum, Flour, Wheat, and Tobacco engagements. For Liverpool we flour at 2s. 6d.@2s. 7½d. by sail, and 2s. 9d.@3s. by steamer, per bbl.; grain at 9½d.@9¾d. by sail, and 10d.@10½d. by steamer, per bushel; cotton at ¼d.@$\frac{5}{16}$d. by sail, and ½d. by steamer, per lb.; and heavy goods 20s.@35s. by sail, and 30s.@45s. by steamer, per ton. Total number of vessels in port on Wednesday, 453.

The New York exports, exclusive of specie, for the week ending Sept. 21, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week.....	$2,599,006	$3,752,261
Prev. reported.....	117,695,766	134,120,941
Since January 1.....	$120,294,772	$137,873,202

The imports for the week ending September 18, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$2,298,940	$2,519,829
Gen. merchandise.....	3,314,235	4,168,733
Total for the week.....	$5,613,175	$6,688,562
Previously reported....	177,182,348	219,806,932
Since January 1.....	$182,795,523	$226,495,494

The balance in the Sub-Treasury on Wednesday was $87,430,917 56.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Central Railroad of New Jersey, new loan, 1890, 97; Central Pacific gold bonds, 96; Milwaukee and St. Paul 1st mort., Iowa Division, 85½; St. Louis and Iron Mt. 1st mort., 81; N. Y. Central 6s, Real Estate bonds, 87; Dubuque and Sioux City R.R., 109; N. Y. and N. Haven, 138; do., 6s, 97; New Jersey R. Union Pacific Railroad.

The reports of business upon the Union Pacific Railroad are very favorable. The earnings since the opening of business in May last have been at the rate of about eight millions a year, which, for a beginning, is doing remarkably well. Of course, these earnings will be greatly and rapidly augmented as the country through which the road runs becomes more thickly settled, and its mineral resources are more fully developed. The interest liability of the company upon its First Mortgage Bonds is but $2,334,096 in currency, so that the earnings are ample to meet all such indebtedness. The Land Grant Bonds, to the amount of ten millions, are secured by a first mortgage upon the entire Land Grant of nearly fourteen million acres, much of which has a high value for agricultural purposes, while other portions are rich in mineral deposits. More than 40,000 acres of these lands were sold in one month after the opening of land sales, at an average of more than $5 per acre. These bonds are received at par, in exchange for lands; and as they run twenty years and pay seven per cent. interest, they are considered a very valuable investment. Further information concerning the business of the road and the character of the company's securities will be found in another column.

COLUMBUS, CHICAGO AND INDIANA CENTRAL RAILWAY CO.,
No. 57 BROADWAY N. Y., Sept. 22, 1869.

For the purpose of contradicting rumors in reference to the successful operating of the Columbus, Chicago and Indiana Central Railway, under the lease to the Pittsburgh, Cincinnati and St. Louis Railway Company, which lease is dated on the 22d day of January, 1869, the undersigned beg leave to say to those interested in the securities, that the Road is sucessfully operated under the lease to the satisfaction of the parties, and shows a continued increase of earnings, with every prospect of a successful future in traffic.

The lessees have made great improvements in the condition of the Road, and its depots, shops, and other buildings, and are adding largely to its rolling stock and facilities for doing business, and will continue to make whatever expenditures may be necessary for the increasing traffic of the future.

THOS. L. JEWITT,
President Pittsburgh, Cincinnati and St. Louis Railway Co.,

B. E. SMITH,
President Columbus, Chicago and Indiana Central Railway Co.

☞ PACIFIC RAILWAY GOLD LOAN, $6,500,000. A seven per cent. land grant, railroad, first mortgage bonds, having thirty years to run. Interest and principal payable in gold. Coupons payable semi-annually in London, Frankfort and New York. Circulars, maps and pamphlets sent on application. The bonds for the present are sold in currency at 95, with accrued interest. DABNEY, MORGAN & CO., 53 Exchange Place. M. K. JESUP & COMP'Y, 12 Pine street.

Railway Joints.

The new "spring nut" fish joints, introduced by Merritt W. Griswold & Co., of New York, for joining the ends of rails, is proving a greater practical success than at first expected, actual tests having shown that the nuts tighten by trains passing over instead of shaking loose as with the old style of joint.

Journal of Railroad Law.

STREET RAILROAD COMPANIES—CONSTRUCTION OF STATUTE—WHEN VINDICTIVE AND PUNITORY DAMAGES WILL BE ALLOWED—RESPONSIBILITY OF COMPANIES GENERALLY.

The facts of the late case of McKeon *vs.* The Citizens Railway Company (42 Mo., 79,) are clearly and fully stated in the following opinion by

Holmes, J.—This was an action for damages for an injury done to a passenger by reason of the carelessness and negligence of the driver of the car. The answer denied the material averments of the petition, and alleged that the plaintiff's injuries were the result of his own negligence. It set up a defense also under the statute entitled "An act concerning street railroads in the city of St. Louis," approved January 16th, 1860. This act provided that "said railroad companies shall not be liable for injuries occasioned by the getting off or on the cars at the front or forward end of the car." We have examined the evidence in order to see upon what basis of facts the instructions were given or refused. It is not our province to weigh evidence or to determine the force or effect of conflicting testimony, but we may consider what the evidence on either side tended to prove, and what not. Instructions should be given or refused upon the case made by the evidence. Theoretical propositions, for which there is no proper foundation in the evidence, or which suppose a different state of the case from that which is proved, should not be given, for they directly tend to mislead the jury.

The case made upon the evidence contained in the record, so far as it is necessary to be stated for the purpose of determining whether there was any error in giving or refusing instructions, was substantially this: That the driver having gone to supper, the conductor was acting as driver in his absence; that the plaintiff, a passenger, being intoxicated and scarcely knowing what he was about, arose from his seat when the car drew near to his place of residence, and went to the forward platform of the car, where he had left his tools, threw the tools off the car, and attempted himself to get off, before the driver had brought the car to a stop; that the driver seized hold of him with one hand to prevent him from jumping or falling off while the car was in motion; that a scuffle ensued, the driver making every effort to prevent him from falling off, with one hand, while with the other he was holding down the brakes, some others also interfering; and that in spite of all the driver could do, the man fell over the dashboard and under the wheels just before the car came to a stop; that the forward wheel injured his arm, and that before he was extricated the horses started and the next wheel went over his leg.

The mass and general tenor of the whole evidence would seem to show clearly enough that the horses were scared in the noise and confusion, and started forward without default of the driver, while the expressions used by some of the plaintiff's witnesses might imply, but do not distinctly say that the driver of his own motion started the horses and drove on. My own impression would be that the jury could not have believed, upon the evidence, that the driver intentionally and willfully drove on while the man was under the car, at the risk of killing him, much less with any intent to do him harm. But the instructions will be considered upon the theory that there was some evidence before the jury from which they might be warranted in inferring negligence on the part of the driver in allowing the horses to start forward.

The effect and intention of the statute would seem to be that where the injury to the passenger is occasioned by his getting off or on the car at the forward platform, it shall be presumed, as a matter of law, that the negligence of the passenger himself contributed to produce the accident and injury, and it is therefore declared that the company shall not be liable in such case. A like construction was given to a somewhat similar statute provision in the case of Higgins *vs.* Hann. and St. Jo. R. R. Co., 36 Mo., 436. It is not supposed that this presumption would preclude the other party from showing that the injury was not occasioned by any such contributory negligence at all, but by some negligence in the officers or agents of the company, wholly independent of the fact that the passenger had attempted to get off or on the car at the front platform. If the accident and injury were occasioned by reason of such attempt to get on or off the car at the front end, the defendant, under the statute, would be relieved from liability, though guilty of some negligence and without reference to the question whether it was in fact the negligence of the one party or the other which actually caused or produced the injury. But again, if the injury were occasioned by the negligence of the driver, in intentionally starting the horses, or in carelessly allowing them to start forward, while the man was lying underneath the car, that would be an independent act of negligence for which the company might be liable, it would raise a question of the capacity, competency, and fitness of the servant for such a place.

The evidence clearly shows that the man was intoxicated, and that he imprudently attempted and persisted in his attempt to get off the car while it was in motion, and that the driver did all he could to prevent him and to save him from falling under the wheels. We find nothing in the evidence that could properly be taken as tending to prove that the driver intentionally and willfully or maliciously started the horses forward. The most that can fairly be claimed for it would be that some vague expressions might tend to show negligence in the driver, or a want of that extraordinary care which the state of things would require in a prudent and careful man under like circumstances.

The first and third instructions given for the plaintiff, besides that they assumed some facts not warranted by the evidence, were directly in contravention of the statute as above explained. The seventh was erroneous, for the reason that there was nothing in the evidence that could justify such an instruction, and it tended to mislead the jury. To the ninth instruction we see no objection.

The first instruction refused for the defendant reads as follows: "If the jury find that the injuries complained of were occasioned by plaintiff while attempting to get off of the front or forward end of the defendant's car then they will find for the defendant." This proposition recognized the statute presumption in relation to contributory negligence, and embraced the whole issue on behalf of the defendant, and we think it should have been given. The instructions which were given for the defendant cannot be said to have covered the same grounds.

The refusal of the other instructions asked for the defendant, considered with those which were given for him, would not amount to any error by which he could have been seriously prejudiced, and some of them were objectionable as placing the whole issue on particular facts.

The sixth instruction given for the plaintiff requires a particular notice. It told the jury, first, that if the negligence or misconduct were not gross, they would assess the damages at a reasonable compensation for the injury, suffering and expenses, caused by such negligence; but second, that if the negligence were gross then they would find "liberal or examplary damages, in their discretion, beyond the actual injury sustained by the plaintiff, for the sake of the example and punishment for such gross negligence." This second proposition carries the idea of exemplary damages entirely beyond a full recompense for the injury sustained, and authorizes vindictive and punitory damages. This goes further than the law ever allows in a case of this kind. Such damages certainly can be given, if ever in a civil case, only in cases where the injury is intentionally, willfully, and maliciously done. (Goety *vs.* Ambs, 27 Mo., 33.) This instruction awards them upon gross negligence merely. In the case of Goety *vs.* Ambs, such damages were spoken of as exemplary damages. In Frevdenheit *vs.* Edmondson, 36 Mo., 226, we had occasion to consider what was properly meant by exemplary damages. It was a case of willful injury, and exemplary damages were defined to be merely a round compensation or an adequate recompense for the injury sustained. Such damages may serve for an example to others in like cases, and may so far be called exemplary. The question of punitory damages was not necessarily involved in that case, but a distinct intimation was given that the principle of administering punishment belonged rather to criminal than to civil jurisprudence. If the conduct of this driver were willful and malicious, with intent to injure the plaintiff, he might be liable to indictment for assault with intent to kill, or some other criminal offense, but his employer was not responsible for his crime nor liable for his acts of willful and malicious trespass. The company was answerable only for his negligence, or his incapacity or unskillfulness in the performance of his duties assigned to him. In such case we have no hesitation in saying that punitory damages, or any damages beyond a full compensation for the injury sustained, cannot be allowed. It is at least, very questionable, upon principle and authority, whether damages for punishment can be given in any civil action. My own opinion is that they cannot. But independently of this question, the instruction was clearly erroneous.

The case not having been fairly tried under instructions which can be regarded as correct, the judgment will be reversed and the case remanded.

☞ The railroad between Swedesboro' and Woodbury, (N. J.) has been completed.

Cotton Crop of the United States.

The *Shipping List* has made up its annual tables of the cotton crop, and we use its figures in our annual compilation, as it has passed for many years for standard authority on this theme. It gives the total of the last crop at 2,260,557 bales, being 170,336 below the corresponding total for the previous year. In our last annual review we said "we cannot think the yield, as a whole, will fall much, if any, below the production of the last year." The difference is not very great, but the total is considerably below the popular estimate at the date referred to, some believing that the crop would exceed two and a half million bales. We now present the yield from different sections, with a comparison from our records of the same in former years:

COMPARATIVE PRODUCT OF COTTON.

	1866-7.	1867-8.	1868-9.
Lonisiana	702,131	579,231	794,205
Alabama	239,516	366,193	230.726
Texas	185,919	114,666	147,817
Florida	58,349	34,639	13,392
Georgia	255,965	495,005	357,253
South Carolina	162,247	240,225	198,943
North Carolina	38,522	38,587	35,912
Virginia	123,627	187,487	160,418
Tennessee, &c.	185,712	374,860	321,891
Total bales	1,951,988	2,430,893	2,260,557

The total exports to foreign ports for the year show a decrease of 208,173 bales, distributed as follows:

	1866-7.	1867-8.	1868-9.
To Great Britain	1,216,262	1,228 596	989,500
To France	198,147	197,515	224,527
To N. Europe	95,342	145,042	177,182
To other ports	47,303	84,663	56,434
Total bales	1,557,054	1,655,816	1,447,643

The total consumed in the United States, including all burnt at the ports, is given at 995,127 bales, being the largest aggregate on the record. We bring forward the comparison since 1856:

	North of Virginia.	Elsewhere.	Total.
1856-7, bales	665,718	154 218	819,936
1857-8 "	452,185	143,377	595,562
1858-9 "	760,218	167,433	927,651
1859-60 "	786,521	185,422	972,043
1860-1 "	650,357	193,383	843,740
1865-6 "	604,685	127,640	731,725
1866-7 "	697,367	156,672	854,039
1867-8 "	799.817	168,348	968,165
1868-9 "	821,924	173,203	995,127

We now present our usual comparison of the total crop of each year since 1821. The total given as the crop of 1865-6 includes a large amount grown in preceding years, but not sent forward until the ports were opened:

COMPARATIVE CROP STATEMENT.

1820-1	430,000	1845-6	2,100,537
1821-2	455,000	1846-7	1,778,651
1822-3	495,000	1847-8	2,347,634
1823-4	509,158	1848-9	6,728,596
1824-5	569,249	1849-50	2,096,706
1825-6	720,027	1850-1	2,355,257
1826-7	957,281	1851-2	3,015,029
1827-8	727,593	1852-3	3,262,882
1828-9	870,415	1853-4	2,930,027
1829-30	976,845	1854-5	2,847,339
1830-1	1,038,848	1855-6	3,527,845
1831-2	987,477	1856-7	3,939,519
1832-3	1,070,438	1857-8	3,113,962
1833-4	1,205,324	1858-9	3,851,481
1834-5	1,254,328	1859-60	4,669,770
1835-6	1,360,725	1860-1	3,656,086
1836-7	1,422,930	1861-2. (est.)	4,800,000
1837-8	1,801,497	1862-3. (est.)	1,500,000
1838-9	1,360,532	1863-4. (est.)	500,000
1839-40	2,177,835	1864-5. (est.)	300,000
1840-1	1,634,945	1865-6	2,154,476
1841-2	1,683,574	1866-7	1,951,988
1842-3	2,378,875	1867-8	2,430,893
1843-4	2,030,409	1868-9	2,260,557
1844-5	2,394,503		

The Sea Island cotton included in the last total amounted to 18,054 bales, the smallest report for a long series of years. The highest yield was in 1858-9, when the crop reached 47,592 bales.

In regard to the growing crop there is the usual difference of opinion. The season has been unusually propitious in every aspect but one—it is a week or ten days late. The growth is vigorous, the bolls are large and thickly set, and only the fear that the frost may not hold off to allow compensation for the late spring prevents our estimate exceeding three million bales. Our own opinion, after a careful comparison of a large correspondence sent us from every part of the cotton field, is fixed upon the interval between two and three-quarters and three million bales. The present indications are that the yield will be nearly, if not quite, the higher amount.—*Journal of Commerce.*

Union Pacific Railroad.

The president of the Union Pacific Railroad Company has addressed the following circular to its stockholders:

"OFFICE OF THE UNION PACIFIC RAILROAD COMPANY,
BOSTON, Mass., September 15, 1869.

"To the Stockholders of the Union Pacific Railroad:

"It is well known that malicious attacks have been made upon your company; upon its credit, and upon the character of the work itself. While all persons who knew the real causes of these attacks were well aware that they were without foundation and only vindictive, it cannot be denied that they were a source of grave embarrassment and difficulty. There is nothing so sensitive as credit; it may receive almost as great a temporary injury from false rumors as from damaging statements of fact.

"The natural result of these assaults upon the company's credit was the arrest of the public sale of its securities, and a threatened danger of stopping the work, when two millions a month were required to continue it. It was fortunate for the country, as well as yourselves, that you had the ability, as well as the courage, to advance the millions from your private means that were required to finish the road. I believe that no private corporation ever before made so large a call, or one that was more promptly responded to. The work upon the line was continued during the winter at a very heavy extra cost, but nearly all the obligations incurred have now been adjusted.

"The 850 miles of road west of Omaha, which was built before last winter's frost, is admitted to be in splendid condition, equal to any in the country, and the remainder will be in the same fine order as soon as actual service brings the road bed in the same solidity. The road has been in successful operation since May 10, almost without accident; and the whole line to the Pacific is admitted to be as safe as any railroad in the country.

"Although the travel has been large, it would have been much greater if the groundless fears of many had not deterred them from making the trip; and there can be no doubt that as these fears are dissipated by successful experience, it will steadily, and even rapidly increase. By the Pullman palace cars the trip is made, not only without any unusual danger, but almost without fatigue.

"The earnings of the road since its opening have been:

From May 10 to May 31	$391,420 12
From June 1 to June 30	706,602 29
From July 1 to July 31	623,559 96

"Notwithstanding the rates for passengers and freights have been largely reduced, the earnings for August will stand at about the same figures as for July. With all the disadvantages attending the opening of the road, the average earnings, so far, have been at the rate of about eight millions a year, which will be steadily augmented by the development of the Pacific coast and by settlement along the line.

"The company own over three million acres of land in the Platte Valley, in Nebraska, which competent judges pronounce equal to any in the West. The lands were offered for sale at Omaha July 27th, and forty thousand acres were sold in one month thereafter at an average of over $5 per acre. The company also own over ten million acres in addition, some of which is of little value, but there are portions from which a considerable sum will eventually be realized. Many portions of the Rocky Mountain and Wahsatch ranges abound in rich mineral ores—especially copper—and the constantly increasing development of the mining interest will add largely to our business. Extensive coal mines are found along the track for 300 miles on the western slope of the Rocky Mountains, for which there is already a good demand.

"You will perceive that the income of the company is now ample to meet the interest on its First Mortgage and Land Grant Bonds, and we have every reason to expect that the natural growth of its business will soon give its stock a value that will make a suitable return for the risk you have taken in building the longest railroad line in the country, through a wilderness which most persons pronounced impassable for a locomotive.

OLIVER AMES, President."

☞ The earnings of the Union Pacific Railroad for the first fifteen days of September, amounted to $358,724 62; for the same time in August, $268,840 05; an increase of $89,844 17; indicating an increase of the month of at least $175,000, notwithstanding the great reduction of the rates of freight and fare.

☞ About 150 laborers are now at work on the extension of the Cumberland Valley Railroad from Hagerstown to Powell's Bend, on the Potomac. The operations are confined to excavations and filling. This force, we understand, will be continuously augmented by Mr. March, the contractor, and the work will be pushed with vigor to completion.

☞ We learn that the Taunton Branch Railroad Company will immediately proceed to take the proper steps to put under contract and build the contemplated line of road between Taunton and Attleboro'.

☞ About 800 men are now employed in the construction of the Knox and Lincoln Railroad. Some of the heaviest work is nearly completed. It is intended to have the whole length of the road, forty-eight miles, completed by June, 1871. The cost will be $1,800,000.

☞ The Memphis and Little Rock R. R. is completed, and trains are now running daily, to L'Anguille, 12 miles west of Madison. Only 30 miles remain to be built.

☞ Trains are now running to Valiska, on the Burlington and Missouri River Railroad, 235 miles west of Burlington. It is expected to have the road completed to the Missouri River, 280 miles, by the 1st of December.

☞ The grading of the Macon and Brunswick Railroad is nearly completed. Only 13 miles of track remain to be laid to Lumber City on the Ocmulgee. On the other side of the river 35 miles are to be laid. The road will be finished by the 1st of November.

☞ The railway from the city of Mexico to Puebla was completed on the 4th, and will soon be in running order.

The First Mortgage Bonds

OF THE

UNION PACIFIC
RAILROAD CO.

INTEREST 6 PER CENT. IN GOLD.

The Union Pacific Railroad has been in successful operation since May 10th, and it is pronounced, by the thousands who have passed over it, to be in all respects as safe and well built as any railroad in the country. By the Pullman Palace Cars the journey is not only made without danger, but without unusual fatigue. The fears that many have expressed in relation to the perils of the overland trip are removed by experience, and the travel is steadily increasing.

The earnings of the road since its opening are officially stated by the Company as follows:

From May 10 to May 31	$391,420 12
From June 1 to June 30	706,602 29
From July 1 to July 31	623,559 96

Notwithstanding the rates for passengers and freight have been largely reduced, the earnings for August will be at about the same average. They will be published as soon as full returns are received. The earnings, as stated above, are at an average of about

EIGHT MILLION DOLLARS A YEAR,

which will be steadily augmented by the development of the Pacific Coast, by settlement along the line, and by the natural increase of traffic.

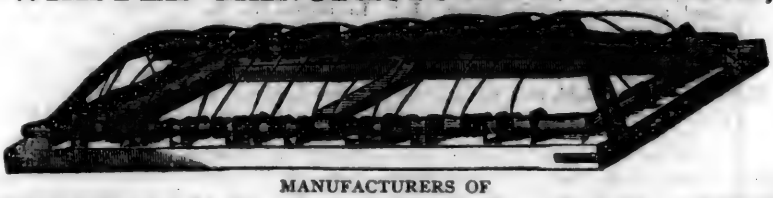
The First Mortgage Bonds of the Company amount to $28,816,000, and the interest liability to $1,728,960 gold, or about $1,334,096 in currency. It will be noticed that the present earnings provide an ample fund for the payment of this interest and leave a large surplus. We are also satisfied that at present market rates, these bonds are a very desirable investment, and that they will advance in price as soon as the facts concerning the business and condition of the Company are generally understood.

THE LAND GRANT BONDS

To the amount of Ten Million Dollars, were issued to obtain means to finish the road, and are secured by

A FIRST MORTGAGE

Upon the entire Land Grant of the Company, amounting to 13,824,000 acres. Three millions acres of this land in the Platte Valley, in Nebraska, are admitted to be equal to any in the West. The sales of land were opened in Omaha July 27th, and 40,000 acres were sold during a month thereafter, at an average price of over $5.00 per acre. While a part of the remainder of the land is of little value for agricultural purposes, there is another part from which a considerable sum will be realized. The value of the Land Grant is largely enhanced by the extensive coal mines, which are now being worked for the supply of the surrounding country, as well as for the railroad, and by other valuable mineral deposits, especially of copper.



THE LAND GRANT BONDS ARE RECEIVED in payment for all the Company's lands at par, and the demand from actual settlers will give them a certain market. They run twenty years and pay seven per cent. interest in currency.

Although the Company have disposed of all their bonds, yet, as they are offered in market, we continue to fill orders at the current rates.

We have no hesitation in recommending both the First Mortgage and the Land Grant Bonds as a very valuable and perfectly safe investment.

FOREIGN AND AMERICAN

Steel & Iron Rails

Of all Weights and Patterns.

RAILROAD SUPPLIES,

Locomotives, Cars, Car Wheels and Axles, Tyre, Fish Bars, Bolts and Nuts, Chairs and Spikes, Machinery, Tools, Bar Iron, Steel, Plush, Car Findings, Lamps, &c.

Old Rails Bought or Re-rolled, as desired.

Having established business relations with the well-known firm of SIR CHAS. FOX & SONS, Consulting Engineers, of London, England, who have for many years been engaged in this class of business, their attention being directed to ***Permanent Way*** and other details of ***Railway Construction,*** I can offer especial inducements to parties wishing to purchase ***ENGLISH RAILS*** or other material, guaranteeing, without extra cost, intelligent and honest ***Inspection during Manufacture,*** thereby securing a ***better article*** than is usually sent to this country, ***especially in the item of Rails.*** Orders sent abroad will be executed under the supervision of the above firm of SIR CHAS. FOX & SONS, whose experience of 40 years should be sufficient recommendation to the American Railway interests, to induce a trial of this method to secure the ***best results*** Am prepared to make ***Contracts for Rails*** delivered free on board, at ports in England, or ex-ship at ports in the United States.

Orders most respectfully solicited.

Rail Fastener and Machine For Sale.

THE JAW ABOUT 30 deg. with a groove under for two bearings holding a metal cap or cushion to prevent sound, front and rear sides have raised flanges sunken between, top widest, bottom narrow with shoulders, barbs on either side. These with every description of fastening are rolled with dies on 4 rollers bearing on each side forming any figure or angle required: samples could be sent to any R. R. Co., or others who will order from the inventor, and enquiries answered.

A. BEEBE,
78 Cedar st., N. Y.

CAR COUPLING FOR SALE.

THIS INVENTION IS SAID TO BE SUPERIOR because it keeps the cars in line, consists in two links or bars working cross wise like the letter X, which with four pins, two on top each platform from a square, the platforms being about ¼ circular, the end of the links or bars are widen up working against gum cylinders on each pin starting and stopping on a spring motion; steel springs are placed in the end of the platform which are made double thickness and braced to hold the springs, and prevent telescoping, the same being packed with wool and covered. The bars are changed on the pins easy by latch slotted in the pins. Plans sent and enquiries answered by the inventor.

A. BEEBE,
1128 **78 Cedar st., N. Y.**

A GREAT CHANCE TO MAKE MONEY.

A RAILWAY PATENT which has realized forty thousand dollars in three years and a half, and has still 13½ years to run, will be disposed of cheap for cash, for all Southern States, and all states and territories West of the Mississippi River. Enquire at this office.

FOR SALE.

SMALL LOCOMOTIVES, suitable for Construction, switching and Branch Road service, also for Street Railroad service, enclosed with Cab. Apply to

PETER FIELDS & SON,
North Point Foundry and Machine Works, Jersey City, N. J.

TO RAILROAD CONTRACTORS.

Memphis, El Paso and Pacific RAILROAD COMPANY.

Office of the Chief Engineer,
Memphis, El Paso and Pacific Railroad Company,
90 Broadway, New York.

SEALED PROPOSALS will be received at the above Office, until **October 15th, 1869,** when Contracts will be awarded, for the GRUBBING and CLEARING, GRADING, MASONRY, BRIDGING, BALLASTING, CROSS TIES and TRACKLAYING of the following portions of said Railroad:

One Hundred and Fifty miles, embracing the Second Division, commencing at Paris and extending westward, to Palo Pinto County.

Specifications, Profiles, Maps and Plans can be examined at the ENGINEER'S OFFICE, in NEW YORK or JEFFERSON.

Proposals must conform to the specification which will be furnished upon application at either of the above places

Evidence of ability to complete contracts will be required and a percentage retained of estimates until each section of five miles is finished.

All the work upon this Division must be finished by October 1, 1870.

Every facility will be furnished those wishing to inspect the ground on the line of the road, by application in person at the Engineer's Office in Jefferson.

J. M. DANIEL, Engineer in Chief,
Memphis, El Paso and Pacific R. R. Comp'y.

Notice to Contractors.

SEALED PROPOSALS addressed to either of the undersigned, will be received until Thursday, September 23, 1869, for the graduation, masonry and bridging of that part of the Connecticut Western Railroad extending from a point on the State line of New York, in the town of Salisbury, to a point in the town of Canton, near the village of Collinsville, a distance of 45 miles, or for any portion thereof.

Profiles and specifications can be seen at the Engineer's Office, Clark House, Winsted, Conn., on and after September 1.

The company reserves the right to reject all proposals not deemed for their interest to accept.

WILLIAM H. BARNUM, President.
Lime Rock, Conn.

Or WILLIAM G. COE, Secretary.
Winsted, Conn.

To Bridge Builders.

THE HALLOWELL AND CHELSEA BRIDGE Company solicit proposals for putting a new superstructure upon the piers of their bridge across the Kennebec River at Hallowell, Maine.

The Bridge is 878 feet long with four spans of 150 feet each, one 106 feet, with a draw of 170 feet in length, and is to be substantially built and covered, to be completed within one year.

Builders will specify the kind of material to be used and the style of bridge which they propose to build.

For further particulars apply to CHAS. A. PAGE, Hallowell, Me.

CROSS TIES.

PROPOSALS FOR WHITE OAK AND CHESTNUT RAILROAD TIES, to be 8 feet in length, 6 inches thick, average 8 inches face, none to be less than 6 in face, delivered at Georgetown and Shallcross wharf, on Sassafras River, will be received until the 1st of October, 1869, by

PRESIDENT KENT COUNTY R. R. Co.,
Chestertown, Kent County, Md.

BROOKS'
Patent Paraffine Insulator Works,
REAR OF 2123 CHESTNUT STREET, PHILADELPHIA.

The guarantees of this insulator are:

1st.—A current resistance in rain or fog, or in rain and fog combined of 100,000,000,000 Ohmads.

2d.—To insulate a conducting wire of any length in rain or fog, or rain and fog combined, to its full working capacity, or the capacity of a similar wire or conductor placed upon any other insulators under the most favorable circumstances of weather.

3d.—Strength, not to break or part by any strain by, or that a No 8 wire will bear.

It is not injured by missiles in the general acceptance of the term.

It does not depreciate from exposure to smoke, soot and the gases from combustion to one hundredth part of the extent of ordinary insulators.

It is not injured by atmospheric discharges, and is a protection to the poles from the same effects.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

BURLEIGH'S PATENT
Pneumatic Rock Drill

Is now in successful working operation in New York, Chicago, Jersey City; also at the Hoosac Tunnel (Mass.) Lake Superior, Colorado and Nova Scotia Mines, Union Pacific and Boston and Hartford Railroads; also in deepening the beds of the Illinois and Michigan Canals, and Des Moines Rapids, and numerous other localities.

The Burleigh Drill is adapted to all kinds of rock cutting in open cut Mining, Tunnels, Sewers, Quarries, &c., drilling holes from 1¼ to 5½ inches in diameter. The Drills are worked either by steam or compressed air. For all kinds of work under ground compressed air is used, serving as a perfect ventilator, as it is exhausted from the Drill. At the Hoosac Tunnel the compressed air is carried upwards of a mile and a quarter, and at that distance works eight Drills at the same time. Information in regard to the ownership of the different State rights. Prices of Drills, Air Compressors, &c., can be obtained at the office of

Nitrate Steel.

IMPORTANT RESULTS OF EXPERIMENTS.—HENDERSON'S IMPROVEMENT.

Among the most interesting matters presented to the British Association for the Advancement of Science, at its last meeting, was the report of Mr. Wm. Fairbairn respecting the qualities of Bessemer's and Heaton's steel. Bessemer's is by the pneumatic process, in which the decarbonization of the purest kinds of pig iron is effected by means of atmospheric air blown up in and among the metal; and Heaton's is the process of applying nitrates in the bottom of a ladle covered with a perforated iron plate; the gases and salts of the nitrates are acted upon by the heat of the metal, and oxygen is evolved with other gases which decarbonize and purify the impurest iron, and from them produce steel of the best quality.

For the past twelve years Knowles, Bessemer, Heaton and others have been searching for the means of using salts that evolve oxygen; and, until within a very short time, Heaton has been the most successful. In Mr. Fairbairn's report, published in *Engineering*, is a tabular statement of the different tests to which both kinds were subjected. The Bessemer steel was manufactured by the Barrow Hematite Company, from the purest hematite ores; while the Heaton steel was made from pig iron containing sulphur, phosphorous and silica, in such quantities as to render it unfit for use in any process of making steel in which nitrates or kindred substances are not used.

Mr. Fairbairn reports the average working strength of six specimens of Bessemer and six of Heaton steel as 8,929 tons of the former to 7,493 tons for the latter. This is about double in favor of Heaton, when subject to transverse stress. And Heaton's, by reason of the lower price of the iron used, is produced much cheaper than Bessemer's.

By the same mail that brought the foregoing report came also a notice of an American invention, the patent of JAMES HENDERSON, of 30 Broadway, this city, in successful application at John Brown & Co.'s Atlas Steel Works, Sheffield. It is claimed to be a more effective and economical plan than Heaton's for producing steel from impure irons, by means of nitrates. It consists in applying, in an ordinary puddling furnace, a box with an open side, which is filled with nitrates and oxides, or other equivalent substances. The box has a handle for moving about in the furnace, under the bath of molten iron, with its open part against the bottom or sole of the furnace on which the liquid iron rests. The heat of the furnace quickly melts and gasifies the contents of the box, which escape from the bottom around its sides; and the gases purify the iron and oxides from carbon, sulphur, silicia and phosphorus; while the salts of the substances form fluxes which assist to reduce the oxides to the metallic state. There is also a gain of steel by this process from the lining of the furnace, which is generally composed of rich iron ores, of more than ten per cent. in weight, over and above the amount of pig iron charged, while there is a saving of fuel and labor of about one-third. In the Heaton process, twelve per cent. of nitrates are necessary, and the metal has either to be worked again in a puddling or steel-melting furnace before it is fit for use, while by the American invention but one-fourth of the weight of nitrate is used. Heaton's process causes a loss of ten to twelve per cent. of the pig iron in the conversion, against a gain of this amount in the American plan, over and above the weight of pig iron originally charged; making a difference of about twenty per cent. in weight in favor of the American plan, and also about nine per cent. saving of nitrates.

The American plan also permits the use of alloys, which are placed in the box and are incorporated with the metal during the process of decarbonization and purification. By this means it is possible to produce puddled steel of enormous tensile strength, amounting to about three times that of the best Swedes iron. And it has extraordinary welding properties, and can be produced of uniform quality; and, owing to the gain in weight of metal from the oxides, and also to the saving of labor, time and fuel in the operation, it can be made cheaper than puddled iron. All this, it is claimed, more than counterbalances the cost of the nitrates and of the boxes.

This improvement, if its merits are correctly appreciated by its friends, will be of great practical value to this country, where there are but small quantities of ores suitable for steel by the pneumatic process, as it will render the ordinary Pennsylvania and Hudson River anthracite iron available for steel, instead of irons that are now imported, for the most part, either in the manufactured state, or in pig iron to be manufactured at our steel works.

Wharton's Safety Switch.

A collision occurred on the New York Central Railroad, near Lyons, N. Y., last evening, between a passenger train and a stock train. Several cars were smashed, and a number of persons injured, some of them severely. A number of cattle were killed. The accident was caused by the carelessness of a switchman.

The above telegraph report is only another warning to all railroad companies, to avail of every means in their power to *prevent* "accidents." Had "Wharton's Safety Switch" been used on this road the "accident" would not have occurred; a fact which Judge, Council and Jury should bear in mind, when the awards for damages are given. "The Monopoly" which is the curse of our own State, would do well to take warning and promote the public safety and its own interest at one and the same time. Let them adopt the "Safety Switch." The people are waking from a long slumber and will soon hold them to a terrible account.—*Bridgeton N. J. Enterprise*, Sept. 24.

Little Rock and Fort Smith Railroad.

In company with Capt. G. H. Meade, chief engineer, Capt. J. H. Haney, secretary, and J. S. Dunham, Esq., we paid a visit to the scene of active operations on the above road, on Friday evening. What we saw confirmed everything we have said on this subject heretofore. In the field of Judge Clendennin, immediately in the rear of his residence, the first party of workmen was met. From here, extending over a distance of two miles, gangs of men are at work grading as rapidly as possible. The squad on this end is moving toward the river, while those on the far end are making their way westward. About 150 men are now employed. During the present week a mile and a half of the road will be ready for the cross-ties. Although one would never suspect it, in traveling by the wagon road to Van Buren, the topography of the country is particularly adapted to the construction of a railroad. There will be no cut of more than six feet until the Palarm Hill is reached. Here, for about one hundred feet, there will be a cut of about 28 feet, the deepest on the entire route.

The next gang of hands will be placed on the western terminus of the first twenty miles and work this way. The line of the road is already chopped out on this section.

There seems no good reason to doubt that this first twenty miles will be completed by the first of April next. As soon as the grading is completed to the river, the ties will be put down, the iron laid, and construction trains placed on the road. Contracts have been awarded for bridge timbers, and cross-ties on the entire section.

Many bids have already been received for the building of sixty miles more, and the contracts will be awarded on the 1st October. At the same time the contract for the construction of a bridge over the river at this place will be given out. There are several bidders on this work also.

All of this has been accomplished within the past five weeks—and we feel no hesitancy in asserting that as fast as men and money can do it, the whole road will be put through.—*Little Rock Gazette*, Sept. 14.

Southwestern (Ga.) Railroad.

The earnings of this road for the years ending July 31, 1868 and 1869, were as follows:

	1868.	1869.
Up freight through	$248,915 16	$178,454 65
" way	195,643 15	130,610 17

Maintenance of cars	89,982 68	62,226 39
Transportation exp.	153,922 32	179,612 87
Incidental expenses	14,595 43	10,912 29
	$577,807 82	$549,729 89
Leaving net sum of	$342,836 47	$360,386 17

Disposed of in 1869 as follows:

Dividend four per cent. Feb. 1869	$128,436 00
Two per cent. on the stock of the late Muscogee Railroad	12,862 00
On preferred stock of that road	476 00
On guaranteed stock of that road	2,000 00
Interest on bonds	48,020 00
Dividend four per cent. Aug. 1, 1869.	155,092 00
Appropriated for taxes	9,500 00
Surplus	4,000 17
Total, as above	$360,386 17

On the 1st of November, 1868, the Southwestern and Muscogee Railroads were amalgamated, and the latter became a part of the former road, thereby adding 50 miles to its length, making the total length of road now owned and operated by this company, 257½ miles.

The total earnings for 1869 (including this additional 50 miles, for nine months,) were $910,116 06: for 1868, (exclusive of the 50 miles,) $910,544 29—a decrease of $10,428 23. The earnings of the Muscogee Railroad for the nine months from Nov. 1, 1867 to Aug. 1, 1868, were $160,270 71. This amount, added to the decrease of $10,428 23, makes the actual decrease of earnings over the same length of road, for the same period of time, in 1869 as compared with 1868, $170,698 94.

The expenses for the year (including the additional 50 miles for nine months,) have been $549,729 89. Last year, (exclusive of the 50 miles,) $577,807 82—a decrease of $28,077 93. If to this we add $112,387 72, the expenses of the Muscogee road for nine months in 1868, it will show the actual decrease in expenses of 1869, as compared with 1868, to have been $140,465 65.

The average number of miles of road in use during the year was 245, against 207½ in 1868. The earnings per mile were: passengers and mails, $1,134 35; freight and miscellaneous, $2,580 41—total, $3,714 76. The current expenses per mile were $2,243 79, and the net earnings, $1,470 97. Gross earnings per mile run by engines, $2 36.4; expenses, $1 42.8—net earnings, 93.6 cents.

The total number of bales of cotton transported during the year was 156,862, against 232,343 in 1868, and 206,307 in 1867. Of the 156,862 bales transported, 91,390 were from all points except Columbus and beyond; from Columbus and beyond, 62,892 bales, and from stations to Columbus, 2,580 bales. From all points to Macon there were 25,747 bales; in 1868 35,361 bales; in 1867, 24,251 bales. The report says:

Owing to the ravages of worms and other casualties, the crop of cotton in the section of country through which our road penetrates, as well as adjoining States, was materially injured, and the anticipation of the planters not realized in the yield, owing to the result of these depredations. There were upward of 75,000 bales of cotton less transported over our line of road the season just passed, compared to the one preceding it: and as the main line of our road receives the larger portion of its revenue from the agricultural products of the country through which it runs, this discrepancy is manifest when we consider that our line of road has been increased fifty miles in length by the consolidation of the Muscogee Railroad. Notwithstanding our gross receipts have been about $10,000 less than last year, we have endeavored to curtail our expenses correspondingly, and I am pleased to say, that on examination you will find them less by about $28,000. The present prospect of a good crop of cotton in South-Western Georgia is exceedingly flattering, and should it escape the depredations of the rust and caterpillar, we may reasonably hope that our receipts will be largely augmented from that source. The immense tonnage of fertilizers that has been transported over our road, and their application to the present crop, compared to former years, is so apparent, in not only giving vigor and luxuriance to the plant, but in multiplying and increasing the fruit to such an extent, that the more prudent and practical farmers have become convinced that it is almost useless to cultivate their lands, with a prospect of success, without the application of some fertilizing stimulant. Hence, we may expect the amount used doubled, if not quadrupled, during the next year. It has been our object to put the rate of freight on all fertilizers as to cover transportation only, and we hope the day not far distant when these commercial manures may be sold at such prices as will enable all classes of planters, the small as well as the large, to avail themselves of their free use, and at the same time, be remunerative to the manufacturers.

In our last Annual Report your attention was directed to circular letters that were issued and sent to the Stockholders by your Board of Directors, calling their attention to the union and consolidation of the Muscogee and South-Western Railroads, by merging the former into the latter, in accordance with an act of the General Assembly of this State, approved March 4th, 1856. The terms of amalgamation had been agreed upon by the respective boards of each road, and similar letters were addressed to the shareholders of the Muscogee Railroad Company, asking their concurrence in the the transaction. The Act above alluded to required two-thirds, in amount of stock, to be represented in affirmation of said consolidation. The basis of agreement was set forth in our last Annual Report, as well as in the circular letters addressed to the stockholders of each company; and we take pleasure in saying, that answers were received from nearly every shareholder, and were almost unanimously in the affirmative.

On the 30th day of October last, the Boards of Directors met in Columbus, and articles of agreement were drawn and signed by the proper officers of each road, and on the 1st day of November last, the Muscogee Railroad, with all of its rolling stock, franchises, and appurtenances of every description, together with its assets, were formally turned over to your Board of Directors, to become part and parcel of your road, as included in said agreement, and in conformity with said Act of the Legislature of March, 1856. The stockholders of the late Muscogee Railroad were to receive their *pro rata* of dividend, to be declared and paid in February last, which amounted to two dollars per share, after converting their stock into the stock of your company upon the terms and stipulations agreed upon, to wit: one-eighth to be deducted from the number of shares held by the stockholders of the Muscogee Railroad Company, and the remainder of shares to be exchanged for a like number of the capital stock of the South-Western Railroad Company.

The general stock of Muscogee Railroad Company, according to the books of the said company, when turned over to this company on the 1st November last, added up	7,003¼	shares	$700,350
Guaranteed stock	500	"	50,000
Preferred stock	282	"	23,200
Total stock	7,785¼	"	$773,550

The bond account stood—

Bonds due in 1872	$140,000
Bonds due in 1876	173,500
	313,500
Stock and bond account	$1,087,050

The bonds of that company are convertible into the stock of said company, in the same manner in which a greater portion of the bonds of this company are convertible into stock, at the option of the holder. During the present year we have converted bonds of the Muscogee Company, amounting to $13,000, into the general stock of this company, on the same basis that the stock was converted, to wit: by reducing the bonds one-eighth from their face. As all of the bonds of the Muscogee Railroad Company are convertible, the presumption is reasonable that more applications will be made for similar transfers.

Since the conversion of the stock of the Muscogee Railroad Company into that of the South-Western Railroad Company, you will find both stock and bonds reduced as follows, to wit: The number of shares of stock issued to the share-

holders of the Muscogee Railroad Company of South-Western stock, in lieu of the scrip held by them, and to those converting bonds of that company--

Amounts to	6,354	shares	$635,400
Guaranteed	500	"	50,000
Preferred	126	"	12,600
Total	6,980		$698,000
Present outstanding bonds			300,500
Total stock and bonds			$998,500

Against $1,087,050 difference as stood upon the books of the Muscogee Railroad Company on the 1st November last, and now on the books of this company, $88,550.

By reference to the Treasurer's Report you will perceive that the bonded debt of this company amounts to $399,000, which is $31,000 less than it was at our last Annual Report. This discrepancy is accounted for by the conversion of that amount of bonds into the capital stock of the company.

You will also find in his balance sheet the Capital Stock of your company, after merging that of the Muscogee Railroad Company, to be	$3,939,900
And the bonded debt of both companies	699,500
Total Capital Stock and Bonds	$4,639,400

We have paid in liquidation of the indebtedness of the Muscogee Railroad, about $100,000, since the amalgamation of the two roads; and my opinion is, that this amount covers most of the claims against that company. This sum has been charged to profit and loss, which explains the reason of the change in that account. As an offset to this large amount, you have the difference of $88,550, produced by the reduction of one eighth in the purchase of the capital stock of that company.

Whereas, by an act of the Legislature of the State of Georgia, approved the 22d day of January, 1852, the Central Railroad and Banking Company of Georgia was authorized to lease and work for such time, and on such terms, as might be agreed on by the parties interested, the Southwestern Railroad, and such other railroads, as then connected, or might thereafter connect, with the Central Railroad; and the said The Southwestern Railroad Company was authorized to lease its railroad to the said The Central Railroad and Banking Company of Georgia, for such term of time, and in such other terms, as it might deem best.

Now, in accordance with said act of the Legislature, authorizing your Board of Directors to make said lease, an agreement was made, entered into, and signed by the proper officers of the Southwestern Railroad Company, and the Central Railroad and Banking Company of Georgia, on the twenty-fourth day of June last; and your railroad, with all of its rolling stock, fixtures, rights and appurtenances of every description, was formally turned over to the President of the Central Railroad and Banking Company of Georgia, upon the following terms and conditions, a synopsis of which is hereunto added, to wit:

1st. The organization of the Southwestern Railroad Company is to be maintained. The President and Directors to be elected annually, as heretofore. Compensation to the President and Secretary and Treasurer, and means to defray the expenses of the Board of Directors at their meetings, to be provided for by the Central Railroad and Banking Company, including office, books, stationery, etc.

2d. Said company to receive the entire assets of your company, and to pay whatever liabilities there may be outstanding against it, including those that may be presented against the late Muscogee Railroad Company.

3d. To make provision in payment of the accruing interest on the bonds of your company, as well as any interest that may have accrued, and not presented on either your bonds or the bonds issued, and now in existence, by the late Muscogee Railroad Company, to protect the same at maturity, and to pay said interest, as well as dividends, when declared, at Macon and Savannah, for the benefit of the bond and shareholders, as is now being done by your company.

4th. The Central Railroad being accustomed to pay dividends annually, at the rate of ten dollars per share on its capital stock, and your road at the rate of eight dollars per share, it was mutually agreed that the stockholders of this company were to receive dividends in the months of June and December, at the rate of eight dollars per share per annum: *Provided*, the rate of ten dollars per share was paid the stockholders of the Central Railroad and Banking Company, during the months mentioned above, annually. But should that company increase their dividends beyond that amount to their own stockholders, then your stockholders are to receive a corresponding ratio of increase, as eight is to ten dollars. It was further agreed, that in *no event* should the stockholders of your company receive a less amount of dividend than seven dollars per share per annum, which is a guarantee worthy of your consideration, when you reflect that causes might operate, or circumstances intervene, to deprive the stockholders of that company of dividends for a season.

5th. It was also mutually agreed between the contracting parties, that as our fiscal year commences the 1st August, and that of the Central Railroad on the 1st day of December, that this company declare and pay its usual semi-annual dividend to its stockholders during the present month, and that a fractional dividend of two dollars and fifty cents per share be declared and paid them in the month of December, so that thereafter the stockholders of the respective roads may receive their regular dividends in the months of June and December, instead of February and August, as has been customary with this company.

6th. It was further covenanted and agreed, that the Central Railroad and Banking Company of Georgia was to keep the road bed, station houses, engines, cars, and everything appertaining to the company's interest, in as good condition as when received from the officers of your road, and should it neglect or fail to pay dividends within six months after the same may be due, then this company has the right to annul the contract, and the Central Railroad and Banking Company binds itself, in the event the demand is made, to return the road, with all of its appurtenances, in as good condition as when received, together with all of its assets, or their equivalent.

7th. It was also covenanted and agreed, that should a stock dividend be declared out of the accumulations belonging to, and now in the hands of the Central Railroad and Banking Company, and paid to its stockholders, that the stockholders of this company shall receive their proportion of the same in the ratio as eight is to ten and that the net earnings received from the operations of the bank, as well as interest from accumulations, to be considered as part of the earnings of the road, and that all the dividends paid to the stockholders of this company, to be free of revenue taxes.

I have endeavored to give you a synopsis of the main features embraced in the articles of agreement, and in view of other roads being projected, and in course of construction, fostered by aid of the State, that must and will become competitors for the business tributary to the line of your road, the judgment of your Board is, that your interest has been protected, and the appreciation of your stock made manifest by the terms of this lease.

The company have 29 locomotives, of which 21 are in good order, 5 want repairs, and 3 are in shop for repairs. The stock of cars consists of: 13 first class, and 11 second class passenger and baggage, 5 baggage and mail, 1 express, 4 provision and pay, 11 conductor's, 215 box freight, 151 platform, and 8 stock. The number of miles run by passenger and mail trains, was 199,499; by freight and other trains, 185,423—total, 384,922. Number of through passengers, 15,075; do., way passengers, 112,099—total, 127,174. Total number of passengers carried over the road since it was opened in July, 1851, 2,352,792.

☞ Articles of Association of the Cincinnati and St. Louis Straight Line Railroad Company, have been filed at Indianapolis. The company propose to construct a road from Worthington on the Vincennes road through Bloomington and Columbus to the Indianapolis and Cincinnati Railroad, between Greensburg and Lawrenceburg. The road absorbs the Indiana and Illinois Central Railroad Company.

☞ Wm. H. Barnum, of Lime Rock, Conn., has been chosen President, and Wm. Caul, of Otis, Vice President of the Lee and New Haven Railroad Co.

Our Northern Railroads.

It is known that the northern section of Wisconsin contains the finest wheat, timber and ore lands to be found in the country, and it has only wanted a proper development of the section to have these lands taken up by actual settlers and Northern Wisconsin become as thickly settled and as prosperous as Southern Wisconsin. These valuable lands through a mistake made at an early day, have been kept out of the market, and have been allowed to lie, almost a waste. It is to be hoped that such a state of affairs is to exist but little longer, and that the settler may have the advantages which the fine lands, the clear and invigorating climate and the excellent markets afford.

The northern portion of Minnesota is being thoroughly developed by a system of railroads. President Baldwin, in running his road from Tomah to Hudson, is doing a good work for our State, and we are glad to learn the thing is not to stop there.

In 1856 Congress granted a valuable tract of land to a company to build a railroad from Hudson to Superior, through one of the most valuable sections of the State. Had the road been built it would have developed the section, and to-day the counties on the line would have been thickly settled. Time was frittered away, and the grant lost to the company, although not gained by the settler. The charter also allowed a branch road leaving the main line at some point in Barron County, and running to Bayfield, on Lake Superior. This branch also had a valuable grant. For the main line a company is now trying to re-secure the grant, and there is a probability that they may do so; but meanwhile another company has started in and propose to build a road from St. Croix Falls in Polk County, to Bayfield. The new line will cross the Superior line, and thence follow the old proposed Bayfield Branch. We refer to the Bayfield and St. Croix Falls road, which held a meeting in this city last week and elected its officers. At the last session of Congress the Senate passed a bill giving this new company the old grant from the junction of the Superior road to Bayfield, and as the company evidently mean business, the House will without question, vote the grant the coming winter. From St. Croix Falls to the junction no grant is expected.

The Bayfield and St. Croix road is about one hundred miles in length, and runs through, or has close communication with Polk, Barron, Chippewa, Burnett, Ashland, Bayfield, Douglas and Dunn Counties. It starts from St. Croix Falls, the head of navigation, and runs to Bayfield, one of the best ports on Lake Superior. The land along the route to the junction is fast being taken up by settlers. This week there are expected there 2,000 Swedes, to settle, and influential men in the old world are now organizing a system of immigration that will, within another year, place ten thousand solid farmers on these lands. One tract of fifty thousand acres lately purchased from the State, by men connected with this new road, will be settled by this same class of sturdy farmers.

The grant from the Junction to Bayfield, is a large one, embracing farming, timber and ore lands, and these will not be sold to speculators, but only to actual settlers and very many are and have been for months anxious to buy them. Outside the reserved railroad lands are to be found some of the most thrifty farms in the State, and there is no earthly reason why the lands of the counties named above should not be covered with just such farms, instead of lying an idle waste.

The railroad company is composed of Eastern and Western men of capital and energy, and all of them interested in the growth of the section. Caleb Cushing owns the famous lumbering mills on the St. Croix, and the road is one of importance to him; Henry M. Rice, of Minnesota, formerly United States Senator, Vice President of the new company, has large landed interests here; Gardiner Colby of Boston, has a large landed interest; H. D. Barron has large interests on the line, and so through the list of Eastern men who are directors or interested in the road. At their meeting here they assured us that there should be no delay in building the road. All the stock was taken and had it been twice as much it would have been taken just as readily. The people of the counties on the line are deeply interested, and trust that Congress will not delay in giving the new company the old grant, satisfied that they will not abuse it as others have, but use it for the good of the northern section of the State.

To Milwaukee the road is one of importance. Uniting at some point yet to be determined with the West Wisconsin road, it will give almost an air line communication with the wheat growing, lumber and ore interests of the Northwest and adds a most important link to our great net work of railroads.—*Milwaukee Wisconsin*, Sept. 15.

Maine Central Railroad.

The earnings of this road for the years ending December 31, 1867 and 1868, were as follows:

	1867.	1868.
From passengers	$268,859 87	$269,257 05
" freight	237,722 82	259,990 09
" express, mails, etc.	24,523 01	28,703 86
	$531,105 70	$544,950 50

The expenses of 1868, were:

Repairs and renewal of track and bridges	$114,505 95	
Repairs of engines & cars	74,212 83	
Repairs of buildings and fences	17,457 15	
Train expenses	21,236 40	
Station expenses	24,808 54	
Oil and waste	4,420 81	
Wood	40,066 98

" $400,000 loan	18,766 00	
		141,852 78
Balance January 1, 1869		$277,956 50

Compared with the previous year the gross earnings show an increase of $13,844 80; with a decrease in expenses of $19,161 46—making the increase in net earnings, $33,006 26. The report says:

The directors respectfully submit this, their annual report for the year 1868. Although the business of the country through which your road runs, has not been especially active during the past year, yet the gross receipts from traffic has been increased. During the same period, the trains have been free from accident or casualty, and no injury to persons or material injury to property has occurred. And while your gross receipts from traffic have been increased, the expenses of management, and renewals and repairs, have been reduced; thus showing a net gain in all, of $33,006 26 over the results of the year's business in 1867. Although the expenses have been reduced, your directors have kept in view, and maintained the policy indicated in their previous annual report, of constantly improving the condition of their track and rolling stock, and maintaining both in first class condition.

At a former meeting of the stockholders of this company, the directors were authorized to make and execute a mortgage of the road and equipment, to secure $1,100,000 of bonds, created for the purpose of meeting the bonds of the company, which fall due between 1870 and 1874. The directors have made and executed this mortgage and created the bonds, but have withheld them from the market thus far, believing that it may be desirable to change the amount of bonds to be issued under certain conditions and restrictions. And further authority in regard to the change of this mortgage, and the sum to be secured by it, will be asked of you at the present annual meeting.

The Dexter and Newport Railroad, which at the last annual meeting was in progress of construction, has been so far completed, that trains are running thereon by this company. Though not complete, the road is in good condition to be run, and arrangements are made with that company, whereby this company are to complete the road at their convenience for a consideration agreed upon. The lease of the road for thirty years at eighteen thousand dollars per annum has been drawn, and is ready to be executed, in accordance with your votes.

The Somerset road, which at this time last year had not been located or even surveyed, has been located, and the grading is progressing so rapidly as to warrant the belief that the first division, from its point of connection with this road in Waterville to Norridgewock, will be opened for use the present year. At a former meeting of the stockholders of this company, it was voted to authorize your directors to enter into an agreement with that company, to lease its road when completed, and to equip and operate the same. They also voted to authorize the directors to aid in the construction of that road, by taking its pay for the transportation of material for the construction of the same, in the stock of that company. Since the last meeting, it has been found necessary to agree further to aid in the construction of that road, in order to insure its early completion; and your board have agreed to subscribe and pay for fifty thousand dollars of the stock of said company, subject to your ratification and approval; which you are respectfully asked to do at this present meeting.

A simple statement of the situation of your road will enable you to see the importance of this new road to you. Your road was located from a point of junction with the Grand Trunk road in Danville, across the country to Bangor, relying much upon the business of the country north of it for its support. The mistakes of the past, lost to you all the traffic of a large section of that territory, and the Somerset and Kennebec road extending into Somerset County to Skowhegan, and crossing our line with the traffic of that County gathered at the above named place, turns the whole of it upon the Portland and Kennebec road at Augusta. The territory through which the Somerset road is located and is being constructed, is as productive as any other section of the State, and this road will secure to you a fair share of the traffic of Somerset County, and something of eastern Franklin County. For these reasons, your directors ask your ratification and approval of their doings in this matter.

The Belfast and Moosehead Lake Railroad Company, which at your last annual meeting was scarcely organized, is now fully organized, and the company has located their road, and the work of grading is rapidly progressing. No contract has yet been made with this company in regard to its connection with your road; but conferences have been had between the directors of the two companies, and it is expected that arrangements equally beneficial to both companies will be entered into, at no distant period.

At the eastern terminus of your road, at Bangor, your line is now fully connected with the European and North American road, and the latter has been completed to a point twenty-four miles east of Bangor, and is in operation to that extent. That company expect also to complete their road to Winn, fifty-eight miles beyond Bangor, the present year. With fair arrangements with these roads, your line cannot but derive a large increase in its traffic by opening so large a section of our State to the beneficial influences of this new mode of transportation. The territories

traversed by these new roads, are as productive (if not more so) as the other sections of the State already reached by railroads, and have an abundance of water power. With the increased facilities of reaching the best markets which these railroads will give them, the inhabitants will be inspired with new life and energy to increase their productions. And so in the end, if not at once, you will realize the reward to which your timely aid to them entitles you.

The company have 14 locomotives, 14 passenger, 3 smoking, 1 passenger and baggage, 5 mail and baggage, 243 merchandize, and 30 cattle cars. Miles run by passenger trains, 87,326; by freight trains, 99,642; by other trains, 27,544—total, 214,512. Passengers carried, 163,830. Freight moved, 108,823 tons.

The standing of the company is shown by the annexed general account. The funded debt amounts to $2,432,080. The stock bonds and stock coupons, amounting to $106,380, have all matured, and are payable in capital stock. The $1,200 Million Loan bonds, being over due, will be paid on presentation. The $1,100,000 Loan bonds were issued from August, 1860, to September, 1861, on 30 years, and are cash bonds. The 1st mortgage, Penobscot and Kennebec R. R. Co., are cash bonds, and mature as follows: $20,000 on the 21st of April of each year, up to and including 1874, and $500,000 on the 2d of October, 1874. The 2d mort. bonds, P. & K. R. R. Co., are cash bonds, and will fall due August 1, 1870. The $400,000 Loan bonds of this company, of which $307,700 are outstanding, were issued from December 1, 1862, to May 1, 1863, on eight years, and are cash bonds.

Export of Breadstuffs.

FROM THE CIRCULAR OF MR. EDWARD BILL.

Our Flour and Grain Circular, (which has been issued regularly since 1845,) with this number closes its twenty-fourth year. The frequency of the communication with England by telegraph and steam has so changed the manner of conducting the export business as to deprive semi-monthly reports of much of their interest and usefulness, and we have for the present decided to suspend publication. Our tables made up with care to the end of the cereal year, show the extent of our shipments to the English and other foreign ports:

Export of Breadstuffs to Great Britain and Ireland from Sept. 1, 1868, to Sept. 1, 1869.

From	Flour, bbls.	Wheat, bushels.	Corn, bushels.
New York	588,197	13,360,015	2,308,398

Last year	2,065,359	13,493,845	9,569,592

Bayfield and St. Croix Railroad.

This company was recently organized at Milwaukee by the election of the following directors: Gardner Colby, S. S. Farlow, J. C. Pratt, and J. W. Converse, Boston; E. G. Roberts, New York; Hon. H. D. Barron, St. Croix Falls; Dr. Samuel Wiley, St. Paul; W. H. Mower, Bayfield; Henry M. Rice, St. Paul. Subsequently the following officers were elected: Gardner Colby, President; Henry Rice, Vice President; E. G. Roberts, Treasurer; W. H. Mower, Secretary. The Milwaukee *Sentinel* says:

This road was chartered by the Legislature last winter, and at a meeting held at St. Croix about a month ago every dollar of the stock was taken by Eastern capitalists. This important railway will run from St. Croix Falls, at the head of navigation on the St. Croix river, to Bayfield, a distance of one hundred miles. It has a splendid land grant of its own, but runs through the large tracts of land purchased from the state by Caleb Cushing of Massachusetts, the Hon. H. D. Barron, and others. The road is one of great importance to the northern section of the state not heretofore accessible to railroads. The readiness with which all the stock of this road was taken shows its importance.

Baltimore and Eastern Shore Railroad Connections.

We are at last enabled to give a more comprehensive view of the route of the proposed railroad from Swann Point to Salisbury, including its distance, and the difference in favor of the new road. Nor do we think the opposition, if any there be, can produce anything to counterbalance the advantages this road presents, or the benefits likely to accrue from its completion.

Commencing at Salisbury, with 55 miles of railroad now built and in operation below that place, viz: 32 miles of the Eastern Shore and 23 of the Wicomico and Pocomoke Road, both of which are having additions made to them, it crosses the Dorchester and Delaware Road at Federalsburg, and the Maryland and Delaware Road at Greensboro'; also crosses the Kent and Queen Anne's Road near the Hewett farm. The distance by this route is 66⅛ miles to Chestertown, there connecting with the Kent County Railroad, 12½ miles to Rock Hall, making a distance of 79 miles by rail, and 20 miles by steamer to Baltimore, or a total distance of 99 miles against 173 miles by way of the Delaware Railroad to Wilmington and the Philadelphia, Wilmington and Baltimore Railroad to Baltimore—thus showing a saving of 74 miles from Salisbury to Baltimore. The route passes, for the most part, a fertile section of country, which is at present destitute of railroad or water communication, except where it crosses rivers or railroads at right angles.

The estimated cost of this road is $950,000, or about $14,000 per mile. This covers everything complete and ready for the rolling stock, including depot buildings, &c.—*Denton (Md.) Union.*

Debt of Arkansas.

Yesterday the Governor gave the final directions for the completion of the funding of the entire public debt of the State, including the Holford Bonds. Action upon these bonds has been delayed thus far on account of his desire to review the whole question before taking final action, as also on account of his illness of the last two weeks.

After a careful reinvestigation on this subject, it is gratifying to learn that there is not even a shadow of foundation in fact or law to justify the cloud which remnants of the old party of repudiation have so zealously attempted to raise. This action, of course, will receive their loudest condemnation, but their hue and cry will not have any effect upon either party, for we know that nineteen-twentieths of the people of Arkansas are fully alive to the importance of sustaining the public credit at all hazards, and will join hands on this one point, however much they may differ on political questions.

This is indeed a new era for Arkansas. The interest on the bonds issued in aid of railroads will be promptly met. The money is already deposited in New York to meet the first installment in October, and ample provisions will be made for succeeding payments. The slight additional tax required to pay the interest and principal of our comparatively small debt will be repaid more than a thousand fold in the benefits following the rapid completion of our public improvements, which depend so largely upon our public credit.—*Little Rock Republican*, Sept. 21.

☞ Ten miles of the Port Huron and Lake Michigan Railroad is in operation and the prospect now is that it will be completed to Capac, 29 miles west of Port Huron by October 4.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterisk* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics.*" State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, October 2, 1869.

Stock Exchange and Money Market.

The week has been one of extraordinary excitement and uneasiness in the street, the result of the wild speculative operations in Gold, which were fairly under way at the date of our last, but which on Thursday, the 23d inst., ran up the aggregate dealings at the Gold Exchange to about 325 millions, and on Friday, the 24th inst., to about 500 millions, when the bubble burst, the Government having ordered unexpectedly a further sale of four millions of coin, which seemed to have taken the *bull* interest by surprise, causing a sudden and violent reaction in the Gold movement, and presently leading to a practical suspension of all business transactions at the Gold Exchange. On Saturday, the Gold Board was unable to resume operations, and so continued to the close of the week under review. The Gold Exchange Bank did not get through with the clearing of Thursday's dealings until Monday, and was even then seemingly unequal to the prosecution of the more gigantic work of clearing the unprecedentedly heavy business of Friday. The interruption in this line caused very grave embarrassment and pecuniary damage to the bulk of the dealers in Gold; and very adversely effected the course of the Money Market, which has been exceptionally stringent, the call loan requirements of the brokers having been less liberally met at from 7 per cent. currency, as the very lowest rate, to as much as 2½ per cent. a day for carrying Gold and Stocks. The discount market has also been deranged. Only the very best class of paper has been in any demand at all, and even this has been dealt in only at the high figures of from 10@12 per cent. per annum. The city banks reported a loss of $5,159,337 of deposits, $1,224,116 of legal tender notes, and $569,628 of specie, with a reduction of $3,054,196 in loans, as the result of the week's business. Their exchanges were up to the unusual daily average of nearly 165 millions. The Gold Exchange Bank sent Friday's business to the Bank of New York, on Tuesday, to have it adjusted; but the latter institution finally determined that it could not do the work, and continue to give adequate attention to its legitimate interests; when the Gold Exchange itself resolved to have the clearing of Friday's operations done by a committee of its own members, on a basis agreed upon simultaneously. Thus, the difficulty stood at a late hour on Tuesday. From Friday to the close of Tuesday, there were no regular dealings, in Gold; and the street business was confined to job lots, such as were wanted by importers and others, for legitimate purposes. Late on Tuesday, the National Stock Exchange resolved to place Gold on its call, with a view to the formal resumption of operations in the precious metal. The urgency of the demand for Money, from the brokerage firms, was very severely felt nearly all the week, but memorably so on Tuesday, when it was found almost impossible to borrow any considerable amounts on stock collaterals, without conceding the right to exact very heavy margins. As a consequence, Stocks were forced on the market in large amounts, and prices were further alarmingly depressed, the market closing decidedly panicky. On Wednesday the Monetary stringency was rather less severe; yet the business of the street was disturbed by the announcement of three important suspensions in the Stock line; and by the protracted difficulty in adjusting the accounts of the final Gold operations of last week.

The specie reserve of the city banks according to the latest return is $13,968,481, against $12,603,483 same time last year. The city bank deposits are now $180,230,793, against $202,068,334 week ending Sept. 19, 1868. The legal tender reserve amounts to $50,025,081, against $63,587,576 same time last year. The circulation now stands at $33,996,081, against $24,050,771 same time last year. The loans are now $268,441,828, against $271,273 544 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged about $164,879,069 a day, against a daily average of $110,403,298 the preceding week, and $131,951,000 the week ending with Sept. 11, 1869. The current week's exchanges average about $122,500,000 a day. The city banks, last week, reported a further loss of $569,628 of specie, $5,159,337 of deposits, and of $1,234,116 of legal tender notes. They reduced their loans, $3,054,196; and increased their circulation, $23,322.

The city bank exchanges on Wednesday were $124,663,874.

National Bank notes to the amount of $241,580

were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $318,013,026, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $18,244,486, leaving, with the existing 1,620 banks, (having an aggregate capital of $422,659,260,) an actual circulation at this date, of $299,768,410. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342 500,000; and for the public deposits, $19,518 000—making a total of $362,018,000. The Treasury Department last week redeemed and destroyed $264,700 of worn and mutilated fractional currency, and issued $937,747 of new. The outstanding amount of fractional currency on the 1st of Sept., was $30,711,799 87 against $31,030,300, on the 1st of Aug.

The U. S. Sub-Treasury receipts, week ending with Sept. 25, were $5,298,413 in coin, including $2,564,400 from customs duties, and $2,519,888 in currency; payments, $1,972,940 in coin, including $386,892 of coin interest, and $7,061,407 in currency; balance at the close of the week, $89,459,979, including $80 658,899 of coin, and $3,653,048 of currency, against $88,264,904 at the close of the preceding week, showing an increase of $1,194,075. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $2,382,919 of coin, including $415,000 from customs, and $3,021,422 of currency; and payments, $2,107,321 in coin, including $77,255 of coin interest and $2,688,856 in currency. On Tuesday, receipts, $1,181,571 in coin, including $539,000 from customs, and $247,278 in currency; and payments $544,580 in coin, including $54,913 of coin interest and $334,820 in currency. The balance at the close of business on Tuesday stood at $89,110,833, (including $3,898,071 of currency, and $82,571,488 of coin,) against $89,700,442 a week previous; and $86,287,097 on Sept. 14, 1869. The aggregate receipts of the office in Aug. were $42,041,140, including $14,319,915 from customs; aggregate payments, $54,599,091, including $18,867,484 of coin interest.

The outstanding amount of coin certificates on the 1st of Sept. was $23,647,580, against $36,725,840 on the 1st of Aug. The Sub-Treasurer at this port, last week, retired $2,310,569 of coin certificates through the receipts for customs.

Government revenues have been on a reduced scale since our last. The excises yielded about three millions; customs at the port of New York, $2,564,400, and at the outports about $850,000 (in coin) more, making the grand total income for the week equal to about $7,481,400 in currency. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 47 millions.

As already mentioned, the Gold speculation reached the climax on Friday, when bids were made about noon as high as 164@165. Washington advices were then announced to the effect that Secretary Boutwell had ordered the Assistant Treasurer at this port to sell four millions of coin, and to reserve to the Government the right to accept all bids made even in excess of that amount, as well as to reject all, not deemed in harmony with the interests of the Treasury Department. The premium made a sudden descent to 132⅞ which reaction gave rise to the most extraordinary scenes ever witnessed in and around the Gold Board. The daily journals surrendered several columns of their space to the description of those scenes. The suspension of business in Gold on Saturday and the succeeding days, the dead-lock at the Gold Exchange Bank, the consequent anxiety and embarrassment of dealers, the severity of the money pressure, the panic in the stock line, and the depression in general business, have since occupied nearly all the available space in the pages of our contemporaries of the morning and evening press. The week has been the most remarkable one in the history of the street. The private dealings in Gold, since Friday last have been limited in amount and within a range of from 131@138. On Tuesday the ruling prices were 131@132. Government received bids on Saturday last for $9,837,590 of gold at from 125 @134⅛; but under the instructions from Washington awarded only two millions at from 132@134⅛. Early on Monday, it was formally announced that Government would sell thirteen millions of Gold, and buy in twelve millions of Five Twenty bonds, under instructions then in force, between this date and Novem ber 1. On Tuesday a million of gold was sold by the Government at 130@132½. On the explosion of the Gold speculation, and because of the dead-lock at the Gold Exchange Bank, the Tenth National Bank, corner of Broad street and Exchange Place, stood a debtor at the Clearing House to the amount of $723,000, which however, was promptly and satisfactorily adjusted. For a while the bank was run upon, but it met all claims on presentation and passed safely through the crisis. On Monday, the Bank was a creditor at the Clearing House to the amount of nearly $600,000. Several private suspensions occurred during the week, as the result of the reaction in Gold, and the panic in Stocks. Litigation has already been commenced in several disputed cases, and a rich harvest for the courts and lawyers is assured. In illustration of the desperate nature of the gold movement, it has been mentioned that while, at about noon on Friday the market rates for small lots of cash gold were 134¾@135, the brokers of the *bull* clique were defiantly bidding 160 for lots of a million. Some few such lots were said to have been supplied to them at their own standard quotation of 160. The Gold Board on Wednesday practically resolved to leave the settlement of the arrearages of last week's business to the brokers themselves. On that day, Gold sold in the street at 130@133.

The coin balances of the Government at this port on Wednesday morning, amounted to 82½ millions.

The customs of the port on Wednesday yielded $337,000. The U. S. Sub-Treasury disbursed $164,542 of coin interest, on that day.

The customs demand for Gold last week, averaged $427,400 a day; thus far, this week, it has averaged $405,000 a day, or equal to a weekly aggregate of $2,430,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $1,207,312, and since Jan. 1, $11,091,436, against $5,769,270 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $100,420,355, against $90,520,719 same time in 1868. At San Francisco, from Jan. 1, to Sept. 17, 1869, $5,915,603, against $6,186,291 same time last year.

The exports of specie, from this port, last week, were $1,073,654, against $104,468 same week last year; total, since Jan. 1,1869, $26,660,840, against $66,103,414 same time last year. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $386,892, and since Jan. 1, 1869, $68,797,662, against $63,336,547 same time in 1868. The specie exports from San Francisco, from Jan. 1, to Sept. 17, 1869, were $28,416,852, against $28,613,004 same time in 1868.

The U. S. Treasury receipts from customs at all ports from July 1, to Sept. 4, were about 47¾ millions.

The amount of specie sent east by railroad from San Francisco, thus far, this year, has been $3,661,179.

When the Gold speculation exploded, there was a prompt rally in the foreign exchanges; and though the dealings have not been extensive, the market has been since quoted quite firm, as a rule, closing, however, somewhat irregularly. Bankers' prime sixty day bills on London closed more firmly but irregularly on Wednesday at 108@108½, and on Paris to 5.27½@5.20; sight bills on London to 108½@109, and on Paris to 5.20c. @5.17½. The offering of produce bills has been liberal again this week. The week's exports of domestic produce have been to the currency value of $3,807,082 making the total since Jan. 1, 1869, $141,680,284, against $122,981,480 same time last year.

Government securities have been in much less demand, and have consequently declined in price, though the depression of values has been light, in contrast with the fearful fall in Stocks. The U. S. Sub-Treasurer bought in some three millions of Five-Twenties, out of an aggregate offering of $7,461,000, at from 116.17@118.07, exclusive of the accrued interest, which is payable in coin. On Wednesday, prices were lower, but the market was more active. Government bought in three millions of Five-Twenties at 115@116.25 nett out of an aggregate offering of about 8¾ millions.

U. S. sixes of 1881 closed here on Wednesday at 118½@119; U. S. Five-twenties of 1862, ex-coupon, 118½@119; U. S. Five twenties of 1864 at 118@118¼; U. S. Five-twenties of 1865 at 118⅛@118⅜; U. S. Five-twenties of 1865, consolidated, 116@116½; U. S. Five-twenties of 1867, 116¾@117; U. S. Five-twenties of 1868, 116½@116¾; U. S. Ten-forties at 108@108½, ex-interest; U. S. Six per cent. currency bonds, 106½@107.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	Sept. 15.	Sept. 22.	Sept. 29.

At. and Gt. West	....	28	....

The Stock market has been in a panicky condition for some days, and prices have been declining at a fearful rate, the shares of the New York Central Road leading in the alarmingly

rapid descent. On Tuesday, these shares had fallen about fifty points, as compared with the figures of the week preceding; and the whole market was demoralized. On Wednesday, there were three failures announced in the Stock line. The market was more active, and substantially stronger, though quite irregular.

General business has been very dull, and prices have been quoted lower in most instances of domestic produce. Middling upland cotton closed heavily on Wednesday at 28¼@28½ cts. per lb. The stock of cotton now here is given at about 4,300 bales. The receipts at the port this week, have averaged about 4,000 bales a day. The receipts at all the ports, thus far in the year commencing with Sept. 1, 1869, have been 61,000 bales, against 48,500 bales in 1868-'8; exports, same time 14,700 bales, against 6,100 bales same time in 1868-'9; stock on hand at latest dates, 43,000 bales, against 51,000 bales same date 1868. The exports of domestic cotton goods from this port, since Jan. 1, have been 16,755 pkgs., against 15,412 pkgs., same time last year. From Boston, 6,218 pkgs., against 6,056 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in less demand, at from 10@16¼c., per lb.; week's receipts, 7,441. Milch cows dull, at $40@$110 each, receipts, 80. Veal calves in moderate request at from 7@12½c. per lb.; receipts, 1,813. Sheep and lambs in demand at from 4@7c., and 7¼@9c. per lb.; receipts, 32,321. Swine more active at 9¾@10¾c. per lb., all live weight; receipts, 17,072.

The week's dry goods imports were valued at $1,650,928, and of general merchandise, $2,883,-103, making an aggregate for the week of $4,534,-031 specie value, against $4,098,601 same week last year. Foreign goods, have been rather weaker in price, and less sought after.

The freight market has been very quiet, and rates have been quoted lower. For Liverpool we quote flour at 2s. 3d.@2s. 6d. by sail, and 2s. 6d.@2s. 9d. by steamer, per bbl.; grain at 8¾d.@9d. by sail, and 9½d.@9¾d. by steamer, per bushel; cotton at $\frac{5}{16}$d. by sail, and ⅜@½d. by steamer, per lb.; and heavy goods 20s.@35s. by sail, and 30s.@50s. by steamer, per ton. Total number of vessels in port on Wednesday, 426.

The Delaware, Lackawanna and Western Railroad Co. sold on Wednesday 90,000 tons of coal, from the Lackawanna Regions. The bids were for small lots, so that the aggregate has not yet been computed. The prices ranged as follows:

Lump	$5 12½	to	$5 25
Steamboat	5 00	to	5 07½
Grate	6 00	to	6 35
Egg	6 00	to	6 65
Stove	6 95	to	7 22½
Chestnut	5 45	to	5 55

This is a decrease on the last sale, three weeks ago, of $1 03 on lump; $1 17 on steamboat; 50 cents on grate; 20 cents on egg; 45 cents on stove; and 90 cents on chestnut.

The New York exports, exclusive of specie, for the week ending Sept. 28, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$2,686,708	$3,807,082
Prev. reported	120,294,772	137,873,202
Since January 1	$122,981,480	$141,680,284

The imports for the week ending September 25, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,898,500	$1,650,928
Gen. merchandise	2,200,101	2,883,103
Total for the week	$4,098,601	$4,534,031
Previously reported	182,795,523	226,495,494
Since January 1	$186,894,124	$231,029,525

The balance in the Sub-Treasury on Wednesday was $86,699,344 07.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Central Pacific gold bonds, 92¾; N. Y. and N. Haven, 130; do., 6s, 98; Dubuque and Sioux City R. R., 105; Louisiana 6s, Levee bonds, 60; Georgia 7s, 90; N. Y. State 7s, Bounty Loan reg., 109; Alabama 8s, 89; Western Union Telegraph, 35; Boston Water Power, 13½; Adams Exp. Co., 49½; Wells-Fargo Exp., 16½; Am. Mer. Union Exp., 30¾; U. S. Exp., 50; Grass Valley gold, 0.29; La Crosse gold, 0.10; Smith and Parmalee gold, 2.20.

Philadelphia.—Huntingdon and Broad Top 1st mort., 83; West Jersey R. R. 6s, 90½; Belvidere Delaware 2d mort., 80; Oil Creek and Allegheny River R. R., 37; East Pennsylvania R. R., 36; St. Louis gold loan, 103; Penna. coupon 5s, 93½; Penna. Canal 10; St. Nicholas Coal, 2⅜; New Creek Coal, ½; N. Y. and Middle, 4¾. The latest quotations are: City 6s, 97@97¼; do., free of tax, 100⅜@100⅞; State 5s, coupon, 93½@94¼; do., reg., 93½@—; do., 6s, W. Miniature Locomotive.

A colliery locomotive, intended for the mine of Henry A. Moodie & Co., at Girardville, Schuylkill County, Pa., was exhibited in front of the Merchants' Exchange, Philadelphia, on the 28th ult. It was made by Messrs. Grice & Long, of that city, and is claimed to possess many improvements over the ordinary mining locomotives, especially in affording more space for engineer, and giving him increased facilities to handle it. The height from the rail is six feet, and it is designed to run upon a track of three feet eight inches. The entire weight is five tons, and it has a hauling power of eighty tons.

☞ PACIFIC RAILWAY GOLD LOAN, $6,-500,000. A seven per cent. land grant, railroad, first mortgage bonds, having thirty years to run. Interest and principal payable in gold. Coupons payable semi-annually in London, Frankfort and New York. Circulars, maps and pamphlets sent on application. The bonds for the present are sold in currency at 95, with accrued interest. DABNEY, MORGAN & CO., 53 Exchange Place. M. K. JESUP & COMP'Y, 12 Pine street.

☞ Messrs. Theodore Polhemus & Co., 13 and 15 Lispenard street, this city, are manufacturers and dealers in Cotton Duck for Car Covering and Car Seats, and all kinds of cotton canvas, sail duck, felting duck, bagging, ravens duck, sail twines, etc., etc. Also Agents for United States Bunting Co. *See Advertisement.*

Journal of Railroad Law.

CORPORATIONS—METHOD OF CONVEYING REAL PROPERTY—AUTHORITY OF THE CORPORATE SEAL.

The facts of the late case of Musser *vs.* Johnson (42 Missouri reports p. 74,) are fully and clearly stated in the following opinion by

WAGNER, J.—The petition in this cause set forth That the North Missouri Railroad Company having agreed to purchase all the assets of the Chariton and Randolph Railroad Company, and being thereto authorized by an act of the General Assembly of Missouri, agreed to pay as a consideration therefor so much of the debts of the said Chariton and Randolph Railroad Company as would not exceed the sum of $25,000, and appointed in concert with said Chariton and Randolph Railroad Company, a committee, of which Johnson, the defendant, was one, to audit the demands of the creditors of the said Chariton and Randolph Railroad Company; that one Abell, another of the committee, combinding with the defendant Johnson and the rest, audited and allowed in favor of said Abell fraudulently a sum of twenty four hundred dollars, which was not in fact due to said Abell, and that the North Missouri Railroad Company after paying this demand to the said Abell, assigned to the plaintiff its right to recover it back from the said Abell, Johnson, and the rest of the committee. The action was brought against all the committee, but only Johnson was served with process, and the answer was put in by him alone.

The defendant answered, denying the fraud and combination charged, and denying the assignment of the claim of the North Missouri Railroad Company to the plaintiff. When the cause came on for trial, the plaintiff offered in evidence the following, as evidence of the assignment.

"PRESIDENT'S OFFICE NORTH MISSOURI RAILROAD COMPANY, July 23, 1866.

"For value received, and without recourse on us, we assign to Richard H. Musser any claim or cause of action we may have against Peter F. Abell, Adamantine Johnson, and John F. Cunningham, on account of any sums of Money improperly paid by us to said Abell, Johnson and Cunningham under the false pretense of the said Abell, Johnson and Cunningham, that the same was due to the said Peter F. Abell by virtue of the contract with the Chariton and Randolph Railroad under date 14th of May, 1864, for services rendered as agent and attorney to the last named corporation, more particularly the sum of twenty four hundred dollars paid upon the certificate of the said Abell, Cunningham, and Johnson, and William E. Moberly on or about the twentieth day of September 1865.

"ISAAC H. STURGEON,
(L. S.) "Prest. North Mo. R. R. Co.
"Attest, with seal of company attached:
"GEO. H. BLOOD, Sec'y N. M. R. R. Co."

The defendant objected to the introduction of this paper as evidence, for the reason that it did not profess to be the deed of the North Missouri Railroad Company, and that it did not appear that the same was executed by any person to that end authorized by said company. The court sustained the objection, and the plaintiff excepted. The plaintiff then introduced Isaac H. Sturgeon as a witness, and offered to prove by him that he was authorized by the executive committee of the North Missouri Railroad Company to sign the above paper. The defendant objected to this evidence, because the same was incompetent and irrelevant. The objection was sustained, and the defendant excepted and took a non-suit, and brings the case up by writ of error.

If a conveyance of real property, purporting to be the conveyance of a corporation made by one authorized to make it for them, be in fact executed by the attorney or agent in his own name as his own deed, it will not be the deed of the corporation, although it was intended to be so and the attorney or agent had full authority to make it so.

The conveyance must purport to be made and executed by the corporation acting by its duly authorized agent. But in matters of simple contract, the rule is not so strict, and an execution of an instrument to bind the corporation will be inferred from the general principles of the law of agency. In the diversified exercise of the duties of an agent, the liability of the principal depends upon the facts that the act was done in the exercise and within the limits of the powers delegated, and especially that it was the intent of the parties that the principal and not the agent should be bound. (Jenkins *vs.* Morris 16, M. & W. 180.)

And where the matter is uncertain on the face of the instrument whether it was intended to bind the principal or the agent, parol evidence is admissable to explain the latent ambiguity, and to aid in the interpretation. (Smith *vs.* Alexander, 31, Mo. 193.)

When the instrument bears no marks of an official character upon its face, there is great difficulty in applying the rule; but where marks of an official character not only exist but actually predominate, the case is shorn of all perplexity. The assignment in this case is headed and dated at the company's official place of transacting business; and although the officers use the plural "we" instead of naming the company, as the contracting party, it sufficiently appears that they were acting officially for the company, and intended to bind it. As strong and irresistible evidence of this, they recite the contract made with the Chariton and Randolph Railroad Company and that "the same was due by virtue of our contract" (meaning unmistakably the North Missouri Railroad Company) with the said Chariton and Randolph Railroad Company, and then sign the paper officially, and attach the seal of the company. There is little room for doubt that it was an official and not an individual act; but if any doubt existed it was competent to remove it by parol testimony.

Another branch of the objection was that it did not appear that the instrument was executed by any person authorized to that end by the company. It does not appear that there was any denial that Sturgeon was the president, and Blood the secretary or that their signatures were genuine. The seal of the corporation, then, imparted authority. For it is a familiar rule that when the common seal of a corporation appears to be affixed to an instrument, and the signatures of the proper officers are proved, courts are to presume that the officers did not exceed their authority, and the seal itself is *prima facie* evidence that it was affixed by proper authority. (Aug. and Ames, on Corp. § 224, and authorities referred to in note 2.) The affixing of the seal is not conclusive evidence of authority; but if dispute arises, the contrary must be shown by the objecting party. (Aug. & Ames, *ib.*)

It is unnecessary to notice the objection to Sturgeon's testimony, as we have already substantially disposed of the case as presented by the record.

The judgment will be reversed and the cause remanded. The other judges concur.

Railways at St. Paul.

Ossian E. Dodge, Secretary of the St. Paul Board of Trade makes the following statement of railways in operation and projected, and claims St. Paul as the centre of the Northwestern system of railways.

The following five railroads are now in operation:

	Miles.
1st. Milwaukee and St. Paul completed entire	408
2d. St. Paul and Sioux City, completed to Mankato	86
On Jan. 1st, 1870, it will be completed to Lake Crystal	100
On Jan. 1st, 1872, it will be completed to Sioux City	270
3d. St. Paul and Superior, completed to Chengwatonna	60
On Jan. 1st, 1870, it will be completed to Kettle River	100
On July 1st, 1870, it will be completed entire to Lake Superior	150
4th. St. Paul and Pacific, (North Branch) completed to Sauk Rapids	80
5th. St. Paul and Pacific, (Main Line) completed to Swede Grove	84
On July 1st, 1870, it will be completed to Breckenridge, on the Red River of the North	220

In addition to the above, which are now in active operation, there are the following five railroads soon to be built:

	Miles.
1st. St. Paul and Chicago, to be completed by Jan. 1, 1870, to Hastings	25
On Jan. 1, 1872, it will be completed entire, *via* connection at La Crosse	400
2d. St. Paul and Stillwater, to be completed Jan. 1, 1871	18
3d. St. Paul and St. Louis, to be completed, two routes, one *via* Austin, one *via* Mankato, by July 1, 1872	...
4th. St. Paul and Tomah, will be completed Northwest from Tomah, Jan. 1, 1870	75
On Jan. 1, 1871, will be completed entire.	150
5th. Northern Pacific R. R. This national enterprise is now in good progress, and the road will no doubt be completed at an early day from St. Paul to Puget's Sound, on the Pacific	2,500

Memphis, El Paso and Pacific and San Diego and Gila Railroads.

Like the first Pacific Railroad, the Southern route has commenced at both ends. A telegram from San Francisco gives information of the departure of Ex-Secretary Seward and Generals Sedgwick and Rosecrans for San Diego, to witness the turning of the first earth on the San Diego and Gila Railroad. At the eastern end, General Fremont and his company, are pushing the Memphis, El Paso and Pacific Railroad, with earnestness. Appearances indicate the completion of the entire line in two years; and there is every reason to believe that neither energy or means are lacking to this end.

Fremont and Rosecrans perfectly understand the task they have undertaken, and they make this, for the time, their sole employment. The present is a favorable moment. All railroad enterprises are discussed with reference to their future connections with the Southern system, and the South itself is deeply interested in this route

to the Pacific by the 35th parallel. As a means of opening up the fertile regions of Texas—of developing the inexhaustible mines of Arizona—of protecting the frontier—it is of incalculable importance to the United States and of special value to the South.

The remarkable ease with which it can be constructed and operated should be noticed. There are no heavy grades, no alkali plains, no sage bush wastes, no snow blockades, to encounter. The work need not be impeded for a day at any season. Wood and water abound, and the route has been so carefully and repeatedly gone over, that the work will proceed at a sure and uniform pace to its completion.—*Railroad Record.*

Finances of Tennessee.

A correspondent appearing to have access to official sources and to be well informed, writing under date of Knoxville, September 16, gives the present debt at about $40,000,000, having been increased to this enormous sum from about $16,000,000 at the beginning of the war. It was officially reported at $34,540,806 in December last, and has been, in various ways, increased since that time to the round sum of forty millions now named. The annual interest on the debt is $2,400 000; the annual expenses of the State are $900,000—making a yearly expenditure of $3,800,000. The entire revenue of the State for 1868 was $1,205 544, and, including estimated receipts from railroads in the bonds of the State, $877,642, gives a total annual revenue of $2,094,806. It is thus seen that there is a yearly deficiency of $1,216,814. This is not the worst feature of this exhibit. This correspondent says he is informed, on reliably authority, that there is no record in the Comptroller's or Treasurer's office at Nashville to show just how many bonds have been issued since Governor Brownlow's administration commenced. Irresponsible men were entrusted by him with blank bonds, to which the seal of the State was affixed, and no one knows the number they signed and issued. On this allegation of impropriety, perhaps fraud, the intimation of repudiation of the debt is started, based upon such reasoning as that the taxpayers have had no voice in creating the greater portion of the debt; that it was incurred while they were disfranchised and that it was manipulated by irresponsible and incapable and reckless men, who cared more for plunder than for protecting the public interest, that hence they were not morally or legally bound to increase taxation in order to pay. However fallacious this reasoning, and however unlikely that repudiation will follow, it is still a point touching the State credit, and may account for the depression of the prices of the bonds. But it applies only to the new bonds, amounting to some twenty millions of dollars. The same objection does not apply to the old bonds, which means the bonds issued prior to May, 1861, and amount to about as much more. It was recently stated that the State could be sued on these bonds, and it seems that there was a time that it could have been. The Legislature, in 1858, passed an act, providing that the State could be sued by serving process upon the Attorney General of the Circuit in which the suit was instituted; but by a recent statute this provision has been repealed, and there is now no means provided by which the State can be served with process. The correspondent from which we quote says, it is therefore impossible to sue the State. This may all be, but we will not believe that any State of this Union will so dishonor itself and shame the nation. It has also been held that bondholders had a lien upon the railroads, in aid of which the bonds were issued. It is now admitted that the State has a lien upon these roads, but it is doubted whether the holders of the bonds can be substituted to the lien of the State. The bonds contain nothing on their face which would warrant any such a claim on the part of the holder. These securities are taken upon the credit of the State, and are not bought with any promise on their face, or in any other way, that they are secured by liens upon any railroad. These facts are the substance of a long letter and elaborate review of the whole financial situation in Tennessee.—*Phila. Ledger.*

Proposed Bridge over the Delaware River.

In consequence of the increase of travel between the city of Philadelphia and the southern portion of New Jersey, now effected by means of ferry-boats, it has been proposed to erect a bridge across the Delaware river, between the cities of Philadelphia and Camden, N. J. Mr. Thomas S. Speakman furnishes the design, which is a suspension bridge of three spans each of 1,100 feet, the river at this place being 3,300 feet in width. At the abutments the flooring is to be 50 feet above high water; at the first pier 105 feet, and in the center of the middle span 130 above high water. A little to the west of the middle of the river a small island divides it into two channels, and of these the western being the deeper all the larger class of shipping pass through it. That portion of the bridge spanning the eastern channel (i. e. middle span) is to have a sufficient elevation above high water to allow of the passage of all ordinary craft, such as sloops, schooners, &c. In order to prevent the interruption of navigation on the western channel a drawbridge will be necessary. Mr. Speakman has designed one, which, while permitting the passage of vessels through it will in no way impede travel across the bridge. It consists of a double draw, constructed in the following manner: On the island, close to which the western channel runs, a pier 400 feet in length is to be built parallel with the latter, and at a distance of 200 feet on both sides of this pier a fork is to be made in the roadway, the branches running to the extremities of the pier, and supported by guy cables, passing over two appropriate towers built on the pier and attached to the main cables at the fork in the roadway. At the pier are to be two sliding draws, one situated on each branch of the fork and worked by steam-engines stationed on the pier. Thus, when a vessel is coming up the river the lower draw is opened and the upper one closed; the vessel passes into the bay formed by the branching roadway and the travel passes over the upper draw. The lower draw is then closed, over which the travel now passes, and the upper one is opened allowing the passage of the vessel. Thus, the number of large craft passing up the Delaware being small, no interruption to travel need occur. The double draw in this case seems well adapted to its purpose.

The rest of the bridge is to be supported by either iron or steel cables, which, however, has as yet not been determined. Each span is to be supported by a separate set of cables, so that in the event of any accident repairs could be made without difficulty. The adoption of this plan will also save much labor.—*The Polytechnic.*

Pittsburg and Connellsville Railroad.

Quietly but rapidly the great railroad line from Pittsburg to Baltimore—which is to give us direct communication with the South, and bring us one hundred miles nearer the ocean trade—is being pushed forward to completion. The greater part of the road has already been graded, and only awaits the completion of the heavy cuts and tunnels required by the road to lay down the rails and place upon them the rolling stock.

The country through which the road passes from Pittsburg to Connellsville is well known; but that portion between Connellsville and Cumberland has hitherto been comparatively unexplored, and is spoken of by all who have visited it as beyond comparison one of the most wonderful in mineral resources that has ever yet been developed in this greatest of all mineral sections of our country.

About twenty miles above Connellsville, about eighty from Pittsburg, and just midway between Pittsburg and Cumberland, a site has been selected for a city. About four hundred acres have been secured for the purpose, and the better portion of it laid out in eligible lots, which are to be exposed for sale at public auction on Thursday, the 7th of October next. It is the only place between Pittsburg and Cumberland where a sufficient amount of level land can be obtained for such a purpose. It is at the confluence of three rivers, the Casselman, the Youghiogheny, and Laurel Hill Creek. Each of these rivers flows from the finest farming and grazing country on the line of the road, extending into Northwestern Maryland and Western Virginia on the one side, and Cambria and Somerset Counties, Pennsylvania, on the other. In the limits of the proposed city the railroad company have fixed the location of their machine shops, round houses, and hotel. Here the passenger trains will stop for meals, &c. All the engines will be changed, as it is the western end of the mountain grade, and a different class of engines will be needed, as the grade over the eastern division from this point is double that of the western.—*Pittsburg Evening Mail.*

Lewisburg, Centre and Spruce Creek R. R.

One of the finest and most promising improvements in the interior of Pennsylvania is making progress under the charter of the Lewisburg, Centre and Spruce Creek Railroad Company. The Philadelphia *Press* says that the project of a railroad through the rich valleys lying between the west branch of the Susquehanna and the Alleghany Mountains is by no means a new one; but the enterprise was allowed to slumber for many years, and the charter was forfeited. The Legislature of 1865, however, revived the charter, with a supplement extending the road at each extremity. This aroused rival interests, and the result is that the Pennsylvania (now the best managed railroad in the United States) is the owner of the Lewisburg, Centre and Spruce Creek Railroad, and has already built one of the finest railroad bridges in the State at Lewisburg, and will push the new railroad through Union, Centre and Huntingdon Counties to an early completion.

Indian Railway Extentions.

It is expected that by June 1870 Lord Dalhousie's trunk system will be complete from Calcutta to Bombay, and from Madras to Bombay, with the exception of the bridge on the latter line over the Toongabuddra and the Kistna, and that by January 1871 communication to and from Bombay will be complete without a break. Madras will then be a day and a half, and Calcutta two days and a half, from Bombay by mail express. The junction from Madras will be at Raichore, and for Calcutta at Jubbulpore.

☞ The railroad between Taunton and Attleborough is to be put under contract immediately. When this road is completed it will shorten the distance from Taunton to Providence about nine miles, without detention or change of cars. In about two weeks, by the partial completion of the Mansfield and Framingham road, direct communication will be opened from Taunton to Foxborough, and soon after to Walpole on the Boston, Hartford and Erie Railroad, thus enabling Taunton to reach the best tide-water in Boston.

☞ The engineers of the Concord and Rochester Railroad report that the line can be constructed in readiness for the rolling stock at a cost not exceeding five hundred thousand dollars, the sum first estimated.

☞ Ninety miles of the Missouri Valley Railroad are now finished, and in successful operation. The construction of the remaining 40 miles is under contract, now being rapidly progressed with, and will be completed this year.

☞ The Westminster (Md.) *Advocate* says that the contract for the grading of the Parkton and Manchester Railroad has been awarded to Messrs. McGuchen, Shower & Co. The contractors immediately entered into an agreement with the company to commence work on the 11th of October.

☞ The executive committee of the Cairo and St. Louis Railroad Company have closed a contract with Mr. J. J. Mitchell for the construction of the road from East St. Louis to Cairo. The work is to be finished within two years from the date of the contract. A survey of the route is to be commenced immediately.

SEMI-BITUMINOUS COAL,
From the Mines of the
CUMBERLAND COAL AND IRON COMPANY,
Deliverable at the Ports of
GEORGETOWN, BALTIMORE AND NEW YORK,
FOR SALE BY THE CARGO.
Orders received at the office of the Company,
90 Broadway, corner Wall street,
WM. M. RICHARDS, President.

Interest on City Stocks.

THE INTEREST ON THE BONDS AND STOCKS of the City and County of New York, due and payable Nov. 1, 1869, will be paid on that day by Peter B. Sweeney, Esq., Chamberlain of the City, at his office in the new Court-house.
The transfer books will be closed Friday, Oct. 1, 1869.

Novel Car Coupling and Telescoping of Cars.

MR. ALVAH BEEBE:
78 Cedar st., New York.
I have looked over Mr. Miller's Pamphlet you handed me in regard to Railroad Car Couplings, and although his arrangement has its advantages, I think yours of cross couplings far excels it and prevents all lateral motion, and your arrangement to prevent Telescoping is to my mind the best arrangement yet devised.
Yours truly,
A. P. WHITING,
Practical Machinist and Inventor for the past 30 years.
ASTORIA, Sept. 29, 1869.
Models of the above together with screw rail fastener exceeding any other may be seen at my office.

OFFICE OF THE
RICHMOND IRON MINING COMPANY,

No. 165 BROADWAY, Room No. 17,
NEW YORK, Aug. 20th, 1869.

THIS COMPANY HAS ON HAND AND FOR sale at their Mine on Staten Island 15,000 tons of Granulated Hematite Iron Ore, which assays as follows:

Sesqui oxide of iron	72.57
Sand, etc., (insoluable)	15.67
Moisture and other constitutes	11.76
	100.00
Yielding metallic iron	50.80

Or proposals will be received for the reduction of the same to iron.
CHAS. HOWDON SMITH,
Secretary.

The First Mortgage Bonds
OF THE
UNION PACIFIC
RAILROAD CO.
INTEREST 6 PER CENT. IN GOLD.

The Union Pacific Railroad has been in successful operation since May 10th, and it is pronounced, by the thousands who have passed over it, to be in all respects as safe and well built as any railroad in the country. By the Pullman Palace Cars the journey is not only made without danger, but without unusual fatigue. The fears that many have expressed in relation to the perils of the overland trip are removed by experience, and the travel is steadily increasing.

The earnings of the road since its opening are officially stated by the Company as follows:

From May 10 to May 31	$391,420 12
From June 1 to June 30	706,602 29
From July 1 to July 31	623,559 96

Notwithstanding the rates for passengers and freight have been largely reduced, the earnings for August will be at about the same average. They will be published as soon as full returns are received. The earnings, as stated above, are at an average of about

EIGHT MILLION DOLLARS A YEAR,

which will be steadily augmented by the development of the Pacific Coast, by settlement along the line, and by the natural increase of traffic.

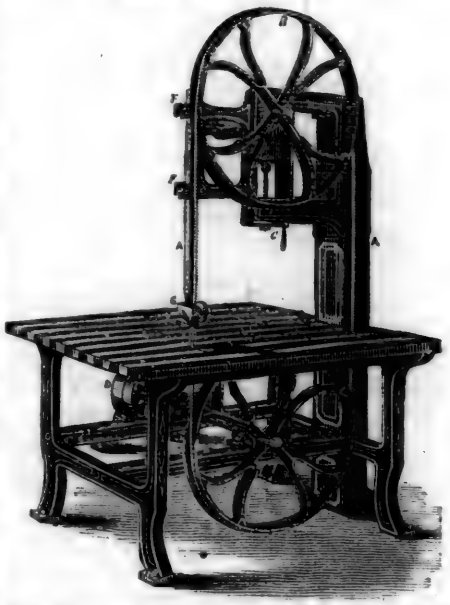
The First Mortgage Bonds of the Company amount to $28,816,000, and the interest liability to $1,728,960 gold, or about $1,334,096 in currency. It will be noticed that the present earnings provide an ample fund for the payment of this interest and leave a large surplus. We are also satisfied that at present market rates, these bonds are a very desirable investment, and that they will advance in price as soon as the facts concerning the business and condition of the Company are generally understood.

THE LAND GRANT BONDS

To the amount of Ten Million Dollars, were issued to obtain means to finish the road, and are secured by

A FIRST MORTGAGE

Upon the entire Land Grant of the Company, amounting to 13,824,000 acres. Three millions acres of this land in the Platte Valley, in Nebraska, are admitted to be equal to any in the West. The sales of land were opened in Omaha July 27th, and 40,000 acres were sold during a month thereafter, at an average price of over $5.00 per acre. While a part of the remainder of the land is of little value for agricultural purposes, there is another part from which a considerable sum will be realized. The value of the Land Grant is largely enhanced by the extensive coal mines, which are now being worked for the supply of the surrounding country, as well as for the railroad, and by other valuable mineral deposits, especially of copper.



THE LAND GRANT BONDS ARE RECEIVED in payment for all the Company's lands at par, and the demand from actual settlers will give them a certain market. They run twenty years and pay seven per cent. interest in currency.

Although the Company have disposed of all their bonds, yet, as they are offered in market, we continue to fill orders at the current rates.

We have no hesitation in recommending both the First Mortgage and the Land Grant Bonds as a very valuable and perfectly safe investment.

JOHN J. CISCO & SON, Bankers,
59 Wall street, New York.

FIRST & PRYIBIL'S
PATENT IMPROVED
BAND SAW MACHINE,
452, 454 & 456 Tenth Avenue,
NEW YORK CITY.

This Machine, with the exception of the table, is made entirely of Iron. Its weight is 1800 lbs.; drums 3 feet 3 inches in diameter; height, 8 feet 5 inches; depth 4 feet 3 inches; width 6 feet; driving pulleys usually 14 inches in diameter, or to suit our customers.

Our machine can be run with a speed of 330 to 350 revolutions per minute, causing the saw to travel 3300 to 3500 feet per minute, and with a belt from 4 to 5 inches in width a block of Rosewood from 10 to 15 inches thick, or wood of any kind, hard or soft, can be cut with ease and facility, the saw being from one-quarter inch to one inch in width. A saw one-eighth of an inch in width, including teeth, can be used for cutting wood of considerable thickness.

The saws are not liable to break owing to our improved slide bearing, which adjusts itself according to the expansion and contraction of the saw. No saw will break except by accident or gross carelessness. The same is used principally by railroad car, chair, and other furniture manufacturers, ship, boat, wagon builders, and also to saw slate, ivory, bone, &c. Guarantee will be given for all we state above. From three to five times as much work can be done with one of our sawing machines, as with an ordinary up and down saw. The work is cut smooth, the saw being retained by an improved guard.

At the present time, Sept. 1869, 64 of our machines are running in this city, and about twice as many in the country.

We also manufacture a lately patented counterbalance oval turning lathe which can be run with more than twice the speed of the old style of lathes, and much more and better work will be done. Many other wood working machines, and also shafting, pulleys, hangers, &c., &c., constantly on hand. Send for Circulars.

PRICE, $350. BOXING AND SHIPPING, $10.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

For freight or passage tickets and all further information apply at the Company's ticket office on the wharf, foot of Canal street. F. R. BABY, Agent.

BURLEIGH'S PATENT
Pneumatic Rock Drill

Is now in successful working operation in New York, Chicago, Jersey City; also at the Hoosac Tunnel (Mass.,) Lake Superior, Colorado and Nova Scotia Mines, Union Pacific and Boston and Hartford Railroads; also in deepening the beds of the Illinois and Michigan Canals, and Des Moines Rapids, and numerous other localities.

The Burleigh Drill is adapted to all kinds of rock cutting in open cut Mining, Tunnels, Sewers, Quarries, &c., drilling holes from 1¼ to 5½ inches in diameter. The Drills are worked either by steam or compressed air. For all kinds of work under ground compressed air is used, serving as a perfect ventilator, as it is exhausted from the Drill. At the Hoosac Tunnel the compressed air is carried upwards of a mile and a quarter, and at that distance works eight Drills at the same time. Information in regard to the ownership of the different State rights. Prices of Drills, Air Compressors, &c., can be obtained at the office of

Steel for Locomotive Fire-Boxes.

The American Master Mechanics' Association met recently at Pittsburg, Pa., and among other of their proceedings was the rendition of a report from a special committee on the use of steel for locomotive boilers and fire-boxes. The essential points of the report related to the question, "Are steel plates preferable to the best iron plates? and, if so, does the difference in strength, safety, and durability justify the difference in cost?" Also, "How, in practical experience, does steel for furnaces compare with copper?" The committee state that they have visited in person or by proxy most of the railroads in the United States, and made careful examination of all that related to the matter before them. Their conclusions may, therefore, be of some interest to steam engineers and others.

The report sets forth the conviction that even the best brands of iron have materially deteriorated during the past ten years; that the more general use of coal, from the injurious action of its sulphurous and other impurities, tends to the more rapid destruction of the metal; and that from these causes the average life of an iron fire-box—unless made of the best Low Moor—is now not more than three years, while in many cases it does not exceed one-half of this period. Even the best selected sheets of the most noted brands are often burned out, blistered, or made brittle. This, it is believed, is not the fault of the manufacturers, but arises from the conditions to which the plates are necessarily subjected, and consequently such drawbacks can only be obviated by the substitution for iron of some other material. It was thought for a while that this would be found in copper, which has in some cases given the very satisfactory result of eight years' use, which may be considered the maximum life of a copper fire-box. In most instances, however, the action of the fire and of the sulphurous gases of bituminous coal corrode the metal, so that the fire-box lasts no longer than the average one of iron. An official of the Northwestern Railroad reports fifty-one locomotive fire-boxes, made of copper sheets half an inch thick, which, after thirty months' use, show marked indications of wear, and will probably have to be renewed in a short time. In some cases, after less than three years' service, the original half-inch sheets were reduced to less than one-eighth of an inch. One instance was mentioned in which, although neither the appearance of the fire-box nor the length of time it had been in use would warrant any surmise of its unsoundness, a single stroke sent the face of a riveting-hammer through the sheet—the latter having been reduced to a thickness of one-sixteenth of an inch.

With reference to the appearance of steel for the purpose indicated, it is stated that on the Northwestern Railroad a locomotive has been run for eight years with a steel fire-box, which has thus far shown no signs of wear, although the coal and water used had proved extremely detrimental to the iron and copper fire-boxes previously used on the same division of the road. On the Pennsylvania Railroad are two locomotives which were fitted with steel furnaces in 1861, which still remain intact. About the same time, on the Baltimore and Ohio Road, two locomotives were furnished in like manner, and with the same results—no leakage or other evidence of giving out being thus far manifest.

In addition to the advantages of durability characteristic of the steel fire-boxes, the committee assert that with them there is none of the tendency to the collection of cinder, soot, etc., upon the sides of the fire-box which is experienced with iron and copper, and which necessarily detracts from their power of conducting or transmitting heat. The report concludes with the statement, well worthy the attention of all interested in the subject to which it relates, that "the committee decide emphatically in favor of homogeneous steel plates for locomotive fire-boxes, at least of all those that burn bituminous coal; and that for boiler-plates for general construction this material combines in a greater degree than any other the requisites of durability, safety, and economy."—*American Artisan.*

Michigan Railroad Matters.

The "Kalamazoo Division of the Michigan Southern Railroad," is the name of the two roads heretofore knowe as the "Gardner" roads, north and south from Kalamazoo, the Michigan Southern Railroad having leased for ninety-nine years the Kalamazoo, Allegan and Grand Rapids Railroad, and the Kalamazoo and White Pigeon Railroad. This arrangement puts an end to the anomalous position these two roads have occupied with the public, in that while they were both owned by one company they have been practically, in respect to freight and passengers, under the control of separate interests, the road north being operated to favor the Michigan Central Railroad, and the road south in the interest of the Michigan Southern.

South Pacific Railroad.

This road was completed to Lebanon on the 31st ult. Lebanon is 187 miles southwest of St. Louis, and 57 miles northeast of Springfield. Between Lebanon and Springfield the road is being built as rapidly as three thousand men can build it. The grading is expected to be finished as far as Springfield by January, and the iron will all be laid by next Spring. Beyond Springfield considerable grading has been done, and as the company own all the charters and land grants of the Atlantic and Pacific Company, they will not stop in their work until this route to the Pacific, known as the thirty-fifth parallel route, is fically completed.

Oscillation of Railway Trains.

Sir Charles Fox states in a letter to a contemporary, his opinion that the oscillation of railway trains, more especially at high velocities, producing what is ordinarily called "gauge concussions," is caused in very great measure by the use of wheels, the tires of which are portions of cones instead of cylinders. It is well known to engineers that the tires of railway wheels are generally coned to an inclination of 1 in 20. It is considered that these were first introduced by Mr. George Stephenson in the expectation of facilitating the passage of vehicles round curves by their adapting themselves through their various diameters to the different lengths of the two rails on which they were running. This, however, is not the case in practice. No advantage is found to arise in the use of conical wheels in passing round curves, and as much evil results therefrom on straight lines, Sir Charles has constructed upwards of 250 miles of railway abroad, in the rolling stock of which he has departed from the usual form of wheel, and has used only cylindrical ones, and he has been gratified with the satisfactory reports of the steadiness of trains supplied with them.—*London Star.*

Central Railroad and Banking Company of Georgia.

The earnings of this road for the years ending November 30, 1867 and 1868, were as follows:

	1867.	1868.
From up freights....	$800,718 08	$567,332 72

The total cost of reconstructing the road to the close of the last fiscal year, has been $1,097,412 13; of which $93,285 95 were expended in 1865, $993,346 87, in 1866, $3,958 41 in 1867 and $6,820 90 in 1868. Deducting this amount from the gross expenditures, will reduce that sum to $3,643,375 52, and leave a balance of earnings, less expenses of operating the road, of $2,321,042 93.

The gross earnings of the Road for the past fiscal year have been....		$2,008,721 31
And the earnings of the Bank.....		60,459 49
Total, Road and Bank.....		$2,069,180 80

Compared with the statement for the year ending 30th November, 1867, it will be seen that our road earnings have fallen off $212,226 57, while the expenses have been reduced only $73,075 31. This decrease in our earnings is due almost entirely to the reduction in our rates for transportation, which we have been obliged to make in order to meet competition from other lines; while our expenses have necessarily been nearly equal to what they were the previous year.

The profit from our Banking operations has not quite equaled those for the previous year, but the difference is no greater than might reasonably be expected, and when taken in connection with the advantage to the company, as a fiscal agent, we have reason to be fully satisfied with the result. The increase of our expenses for this department of the company's service, is due to an increased force, which it has been found necessary to employ in order to meet promptly the requirements of our patrons.

It is gratifying, notwithstanding this reduction in our business, to be able to make a statement showing our ability from the year's operations to pay dividends of 7 and 5 per cent., in addition to the payment of $27,191 11 on account of "Bank in Liquidation," which is not a legitimate charge against the current business of the company.

There has now been charged to this account (Bank in Liquidation) since the reorganization of the road the sum of $512,276 74, and as it is believed that hereafter we shall be called upon for but little more on this account it will be closed by profit and loss.

While it is unnecessary to enlarge upon the reports from heads of departments for operating the road, it is proper to say that your property has been substantially improved during the year. The number of Engines shows one less than at the close of last year, but their intrinsic value has been enhanced. The number of cars has been increased while their condition has been greatly improved. The permanent way, or track, has been decidedly improved by the purchase of new and re-rolling of old rails, paid for during the year, to the extent of 2,705 tons; of these there are about 1,707 tons of new English rails; 53 tons of steel rails, 896 tons of re-rolled rails, and 49 tons of Belgian rails. This is rather over the estimate made in the Report for the year ending 30th November, 1866, but taking the two years that have elapsed since that date and the quantity has not averaged up to the estimate then made, and which experience has since proved will be required yearly to bring up the permanent way to an economical standard for transacting the business now offering.

In reference to the general question of expenses for maintaining and operating the road, it is hoped that some further reduction can be made; and to this end the best efforts of all should be addressed, but ought never to be carried to a point at which the road or its equipment begins to deteriorate.

In the report of 1st December, 1857, the Board adverted to an application then pending before the State Legislature for State aid to the Macon and Brunswick Railroad Company; giving a synopsis of the establishment of the railroad system of Georgia, and pointing out the injustice that such aid would work to roads that had been built by private capital. Recent legislation, disregarding the injury to investments by private capital and with the almost positive certainty that the projected lines cannot pay for years to come, if ever, has given State aid to such an extent as, if fully carried out, must very materially damage our State credit and seriously impair, if not destroy, investments that are now made, not only by private capital, but by the State itself. Looking to the culmination of this mistaken policy the Board at an early day saw the necessity for seeking business from a greater distance, and with that view has, within the past year, rendered aid to the Montgomery and West Point road so as measurably to put it under the control of this company; and, in connection with the South Western Railroad Company, have given assistance to the Western road, connecting Montgomery and Selma, by the endorsement of its bonds, which will ensure its completion during the coming year. In consideration for this endorsement we have received 1,500 shares, representing $150,000, of the common stock of that company, which the Board regards as intrinsically worth 25 cents on the dollar. The South Western Railroad Co. has also received a like number of shares, which gives to the two companies control of that road. With this gap of 44 miles completed, we shall have an unbroken rail from Savannah to the Mississippi River, at Vicksburg, only 670 miles, which will be much shorter than any other from the Southern Atlantic coast, and, it is confidently believed, must contribute very considerably to the business of your road.

In addition to these two roads which it has been deemed wise to foster as feeders to our line, we have the Mobile and Girard Railroad also contributing a very considerable amount of business. Under a resolution of stockholders in convention 20th December, 1866, the Board has agreed to endorse the bonds of that company to the extent of $250,000. Of this amount there has been $185,000 endorsed, and within the past year it has been found necessary to render further aid to this road in order to carry it to a point about eighty-five miles from Girard and to complete the bridge at Columbus, so as to connect it with the Muscogee, now South Western road. This extension and the connection at Columbus is absolutely necessary in order to render productive the investment that has been made. This additional aid was asked during the past year, and the Board agreed to make a further endorsement of $250,000 upon condition that one half of the stock that has been issued should be bona fide transferred to this company as security for the payment of the entire debt. The total number of shares issued by that company to private individuals and corporations is 12,200, and of these 3,445 have been transferred in accordance with the stipulations for the endorsement. By a recent letter from the Secretary of that company the Board is informed that active steps will be taken to obtain the transfer of the balance necessary to a compliance with the requirement of this Board for the endorsement asked. While giving aid to extensions that must largely increase our business, the Board has kept constantly in view ultimate security to our company.

In addition to the rival lines of road that may be built upon the credit of the State, there are other causes tending seriously to impair investments that have been made; we allude to competition from lines claiming a share of the business that is fairly tributary to your road. The policy of such lines is to offer transportation by a longer

and more expensive route at reduced rates. This in turn obliges a reduction by the natural channel, and in some cases a counter competitive rate, when the opposition will again reduce, so that in the end the line fairly entitled to the business must do it at an unremunerative rate, or lose it altogether. This policy is now prevalent and apparently popular with too many roads of the country; but why it should be sanctioned by stockholders whose interest is at stake, the Board is at a loss to understand. The managers of roads that persist in this kind of warfare are capable of doing an immense amount of injury to otherwise remunerating lines without in any way benefitting those under their control. How far this policy is to be carried, or when it is to cease, the Board is unable to predict, but it is easy to foresee the utter ruin that must follow its continuance, and we cannot close this report without entering our protest against a policy so disastrous in its results.

The company have 49 locomotives, 24 first class and 10 second class passenger cars, 9 mail, 29 baggage and package, 3 express, 22 conductor's, 429 box, 170 platform, 14 stock and 3 provision cars. Miles run by locomotives, 828,025; by cars, 7,494,035. Total number of passengers carried, 95,006, a decrease as compared with the previous year of 31,252. Bales of cotton transported, 358,127, against 272,427 in 1867—an increase of of 85,700. Pounds of guano, salt and lime carried, 25,786,401, an increase of 190,053.

Master of Transportation.—WM. ROGERS.

Treasurer.—J. F. WARING.

The Yankton Division.

On the Yankton Division of the Milwaukee and St. Paul Railroad tracklaying has been delayed by continued rains, nevertheless the river has been reached and spanned. The construction train is now on the march to Shell Rock. The first station west of Charles City is on Flood Creek, which has just been surveyed and christened Danville. Mason City, twenty miles west, will be reached in time for the late grain shipments. Clear Lake, ten miles further, will probably be the end of this year's operations, but another year will witness many miles of the road built and pouring the trade of Western Iowa into Milwaukee.—*Mil. Wis.*

Northern (N. H.) Railroad.

The earnings of this road for the years ending March 31, 1868 and 1869, were as follows:

	1868.	1869.
From passengers	$190,103 26	$181,846 57
" merchandise	415,743 47	413,787 96

Add balance of interest account		902 58
Total income		$502,471 28
Dividends December 1, 1868, and June 1, 1869, 4 per cent. each, and U. S. tax	$248,986 49	
Difference in purchase and sale of real estate	10 00	
		248,996 49
Balance of income account		$253,474 79

Which, as heretofore, is invested in fuel, shop stock, rails, and in Northern Railroad, &c.

There have been purchased and cancelled during the past year $5,300 of the Bonds of the company, leaving outstanding, March 31, 1869, only $120,600, payable April 1, 1874.

The contingent fund has increased to the sum of $77,896 37, and is safely invested.

The gross receipts were—

For the year ending March 31, 1868	$625,317 58
" " " 31, 1869	615,616 59
Decrease in receipts	$9,700 99

The expenses for same time were, viz:

Year ending Mar. 31, 1868	$406,032 16
" " 31, 1869	425,952 18
Increase in expenses	$19,920 02
Decrease in net income	$29,621 01
The receipts from transportation of merchandise were less than the previous year by	$1,955 51
And of passengers by	8,256 69
And from miscellaneous items there was an increase of	511 21

The amount of business actually done on the road during the past year, exceeds that of the previous year. But on account of the reduced rates received on the through business, from the great competition which existed between the lines to the West, the receipts have been less than those of that year. This will account for the decreased income and yet increased expenses of the past year as above stated.

The net profit the past year has been less than eight per cent. on the capital stock of the company, but it has been thought best by the directors to divide that amount, and make up the deficiency from the earnings of previous years; which has reduced our income account, leaving the balance of that account at $253,474 79.

During the past year 625 tons of new rails, and 38,111 new sleepers have been laid in the track, and 2,600 tons of rails have been taken up, repaired and relaid.

The road-bed, track, bridges, depots and equipment have been kept up, and are in all respects in good working order. The great freshet caused but little damage to the road.

We have built, during the past year, one mail and smoking car, two baggage cars, forty-four freight cars, and seven gravel cars, all of which are to replace old cars, except twenty-two of the freight cars which are additions to the rolling stock. We have also rebuilt two locomotives, making them substantially new.

Those interested in the proposed extension of the Railroad from Bradford to Claremont, are still earnest in their efforts to secure the success of that enterprise. The amount proposed to be contributed by towns and individuals to aid the construction of the road, will probably soon be made up. With that view a careful survey of the route is now in progress, for the purpose of ascertaining whether the road can be constructed at a cost which the business and other advantages to be derived from it will warrant. The results of that survey, thus far, are favorable. At the last annual meeting of this corporation, the directors were authorized in their discretion, to aid the enterprise so far as the interests and means of the corporation in and derived from the lines connected with the proposed road would allow. The directors believe it would be for the ultimate and permanent benefit of this corporation, to do so, if the results of the full survey shall prove as favorable as now expected.

The equipment of the road March 31, 1869, was as follows: 10 passenger and 14 freight locomotives, 388 long and 94 short merchandise cars, 15 passenger, 6 baggage and 9 gravel cars. Number of miles run by passenger trains, 161,377; by freight trains, 232,727; by other trains, 4,932—total, 399,036. Number of passengers carried 144,808; do., carried one mile, 5,735,262. Tons of merchandise carried, 290,465; do., carried one mile, 18,110,436.

TRIAL BALANCE, MARCH 31, 1869.

Honduras Railroad.

This important enterprise, which will reduce the time by sea between San Francisco and New York to fourteen days, originated some years since with Mr. Squier, who first gave it shape and consistency while he was United States Minster to Central America. It hung fire for a long time between American, French and English capitalists, who in turn had the trans-continental railroad route surveyed at great expense, and always with the same result. Each time war or Panama Railroad interests or untoward events retarded operations, until the great house of Bishopscheim & Goldschmidt, of London, in connection with other European capitalists, took the affair in hand, and it is now only a question of time, say another year, for the locomotive to be running from ocean to ocean. Shiploads of iron and material from England have been landed at both termini, and thousands of laborers, native and foreign, are at work along the line. The distance across is about 240 miles, there being no serious impediments of mountains or rivers on the route. The harbors at both ends are excellent. Port Cortes (or Caballos), on the Atlantic side, is safe, deep and well protected; while the great Bay of Foneseca, on the Pacific side, is one of the finest harbors in the world, being, in fact, a "constellation of harbors," land-locked, deep, capacious and with accommodations for unlimited shipping.

By this route the distance between New York and San Francisco is shortened 1,200 miles—a fact to which no ocean traveler can close his eyes, the moment that regular lines of steamships commence running; and passengers and freight now going by Panama will naturally seek the shorter route. The time between San Francisco and New Orleans, *via* Honduras, will be reduced to about eleven days, and although no steamship route can be expected to compete with our own continental railroads, still there must necessarily be much freight and many passengers passing by the Honduras Railroad, especially those going to or from the Southern States. The principal advantage which the Honduras route has over that of Tehauntepec consists in its fine harbors, of which the latter is entirely destitute, while the distance between New York and San Francisco is about the same.—*San Francisco Alta California.*

Western Union Telegraph Company.

This company was organized on the 1st of April, 1851, as the New York and Mississippi Valley Printing Telegraph Company, for the purpose of building a line from Buffalo, N. Y., to St. Louis, Mo. By numerous purchases and consolidations of lines throughout the country, which have been going on almost uninterruptedly for nearly twenty years, a complete unification of the great majority of the telegraph lines in the United States has been the result, and rendered the system the most extensive and efficient in the world.

The territory now occupied by the lines of this company embraces almost the entire civilized portion of the continent of North America. On the eastern coast its lines extend from Plaister Cove, on the Gulf of the St. Lawrence, to Indianola, on the Gulf of Mexico; and on the western coast from Los Angelos, California, to the fisheries on the Kishyox River, 800 miles north of New Westminster, British Columbia. They reach across the continent, from the Atlantic to the Pacific Ocean, and embrace every State and Territory in the Union but Minnesota, New Mexico and Arizona, and include the British Provinces of Nova Scotia and New Brunswick. Its lines also have an exclusive connection with those in Newfoundland, Canada, Minnesota, Wisconsin, and New Mexico, and with the Atlantic and Cuba Cables.

Among the more important lines which have been or are now being rebuilt, is that extending from Omaha to San Francisco.

The opening of the Pacific Railroads has fortunately remedied the difficulties from Indians, and the lines have been transferred from the old route to the railroads as fast as possible. Within the past year the new lines have been completed over the entire length of the Union Pacific road from Omaha, Nebraska, to Promontory Summit, Utah, a distance of 1,200 miles; and over the Central Pacific road from Sacramento, California, to Elko, Nevada, a distance of 468 miles. Nearly all the poles are distributed for the construction of the line over the intervening section between Promontory Summit and Elko, a distance of 220 miles, and it will be completed during the present season.

The following table gives the aggregate amount of line which has been constructed and reconstructed during the past three years, showing it to be more than 30 per cent. of the entire extent of line belonging to the company:

	—Constructed.— Miles of poles.	Miles of wire.
July 1, 1866, to Dec. 31, 1866	1,624	2,748
Dec. 31, 1866, to Dec. 31, 1867	2,518	4,443
Dec. 31, 1867, to Dec. 31, 1868	2,202	6,036
Dec. 31, 1868, to July 1, 1869	1,624	4,900
Total	7,968	18,127
	—Re-constructed.— Miles of poles.	Miles of wire.
July 1, 1866, to Dec. 31, 1867	3,255	6,490
Dec. 31, 1866, to Dec. 31, 1867	2,356	4,751
Dec. 31, 1867, to Dec. 31, 1868	2,032	4,604
Dec. 31, 1868, to July 1, 1869	430	1,735
Total	8,073	17,580

The following statistics will show the comparative extent of the lines, wire and offices belonging to the Western Union Company, and those working in exclusive connection therewith, and of those of all the rival organizations:

Miles of line belonging to W. U. system	66,263
Miles of wire belonging to W. U. system	121,595
Number of stations belonging to W. U. system	4,692
Miles of line belonging to rival companies	6,773
Miles of wire belonging to rival companies	9,100
Number of stations belonging to rival companies	337

Thus it will be seen that, of the total number of miles of line in the United States and the British Provinces, the proportion belonging to all rival organizations is about ten per cent. and of wire and stations about seven per cent.

The increase of the lines of the Western Union Company by construction alone, during the past three years, exceeds by 1,195 miles the total amount of lines belonging to all the rival organizations in the United States and Canada; while the amount of wire erected by this company during the same time is 9,000 miles more than that owned by all the rival companies combined.

The capital of the company at its organization in April, 1851, was $360,000. For more than seven years thereafter no dividends were made, the surplus earnings being devoted to the construction and purchase of additional lines. On the 23d of December, 1863, the amount of stock outstanding was $7,950,700, the increase in the eleven years which had intervened being due to consolidations of other lines and the capitalization of profits. The united capital of the various companies whose lines were consolidated with ours during this period amounted to over $7,000,000. The company subsequently issued its stock upon favorable terms in the acquisition of other telegraph lines to the extent of $2,116,200, and on the 11th of May, 1864, made a stock dividend of $100 per share, thus increasing the capital to $20,133,800. It has since been increased as follows:

A. & O. Telegraph stock	$833,400
E. & M. Telegraph stock	68,000
House Telegraph stock	5,700
Pemb'n & Gold. Trustees	3,800
Cash	77,000
Western Union bonds	91,500
Ithaca Telegraph stock	14,500
California State Telegraph stock	164,900
Syracuse and B. Telegraph stock	4,800
Missouri and Kansas Telegraph stocks	80,400
United States Telegraph stock	3,886,200
United States Pacific Telegraph stock	3,333,300
Equalization of stock, as per consolidation agreement	468,000
Fractions	56,100
Truemansburg and Senaca Falls stock	3,500
Hicks & Wright repeat	1,500
Lodi Telegraph stock	500
American Telegraph stock	11,833,100
Pitts., Cin. and Lou. stock	4,100
Total capital stock	$41,063,100
Owned by company exclusive of the sinking fund	494,800
Balance on which dividends of July, 1869, were paid	$40,568,300

The bonded debt of the Western Union Company was begun in 1864, by the issue of $2,000,000 of seven per cent. bonds, for the purpose of buying the control of the stock of the California State Telegraph Company, and for the construction of new lines. These bonds were convertible into the stock of the company at par, and $91,500 were subsequently so converted, leaving the balance outstanding January 1st, 1866, $1,908,500. The amount since issued is as follows:

Russian Extension Telegraph stock	$3,170,292
California State Telegraph stock	218,940
Western Union Telegraph stock	10,000
Wash. and N. O. Telegraph stock	53,175
Real estate	50,000
For cash	570,688
American Telegraph bonds	89,500
	$6,071,095
Bonds paid and cancelled	1,436,995
Amount of bonded debt July 1, 1869	$4,634,100

These bonds mature as follows: In 1878, $89,500; in 1875, $4,544,600—total, as above, $1,634,100.

The bonds issued in 1864 became due in May, 1866, and May, 1867, and were paid partly from the net earnings of the company. One dividend was passed because it was deemed prudent, in the then existing state of financial affairs, to appropriate the earnings to the payment of the $540,695 of bonds maturing in May, 1867, rather than to divide them among the stockholders, and thereby compel the negotiation of a new loan with which to meet the maturing debt.

The greater portion of the debt of the company was incurred in the grand attempt to build a line on the northwest coast and across Behring's Straits, to connect with the Russian line at the mouth of the Amoor River, known as Collins' Overland Line to Europe, which was abandoned after the successful submergence and operation of the Atlantic Cable.

In May, 1867, it was decided to establish a sinking fund to provide for the bonded debt, and the sum of $20,000 per month has since been appropriated to that object.

Up to December, 1868, the sinking fund was invested in the bonds of the company, which, as

fast as they were purchased for that account, were cancelled. Since that date the Executive Committee have been authorized by the Board of Directors to invest the sinking fund in the stock of the company, when it can be purchased for one half the market price of the bonds. The sinking fund account now stands as follows:

$488,500 Western Union bonds of 1875, purchased and cancelled	$418,971 80
2,008 shares Western Union stock	72,251 75
Balance uninvested	29,776 45
	$521,000 00

At the annual meeting of the stockholders, held July 8, 1868, the following by-law was adopted:

"The Board of Directors may hire or purchase the lines, or purchase stock of any other telegraph company; but neither the capital stock nor the bonded debt of the company shall be increased beyond the amount now authorized, except by the written consent of two-thirds of the directors, entered in the Secretary's records of proceedings of the board, and by a vote of the stockholders holding a majority of the capital stock, at an annual meeting, or at a special meeting called for that purpose."

The net income of the company from July 1, 1866, to July 1, 1869, has been as follows:

	1866–'67.	1867–'68.	1868–'69.
July	$151,910 57	$175,239 86	$205,566 95

Total, as above		$8,179,474 44

Northern Pacific Railroad.

Reports of the most favorable character have been received from exploring parties who have just returned from a tour of survey, and it is proposed to commence building early next Spring. Conditional arrangements have been made in Stockholm for a force of 7,000 Swedish laborers, who will be employed upon the eastern end of the route, and the same number of Chinamen will be employed upon the western division. The construction of the Pacific side will commence at the Wallula, at the head of the permanent navigation of the Columbia River, a terminus which will be only temporary, the original design of carrying it to Puget Sound being adhered to. The eastern terminus has not yet been located, but according to the terms of the charter it is obligatory to locate it upon the shores of Lake Superior. The work upon the eastern and western divisions will be commenced simultaneously.

Atlantic and St. Lawrence Railroad.

ANNUAL REPORT OF THE DIRECTORS TO THE STOCKHOLDERS, AUGUST 3, 1869.

Within the last year a large part of the track has been relaid by the lessees with new iron and sleepers, and this work of repairs and renewal is still going on effectively. The successful establishment of the Portland rolling mills has contributed very much to the facility with which new rails of superior quality are now furnished to this and other lines of road having immediate connection with Portland. Very extraordinary difficulties were encountered from repeated snow storms in the months of February and March last, extending throughout the Atlantic line and over much of the Grand Trunk line in Canada. Nothing so severe had occurred since the opening of the through line in 1853. But these difficulties were overcome by the persistent efforts of the managers of the line. As the winter was altogether beyond the average in severity, and the track is now so much improved, there is a just encouragement of greater success in the future operations of the road. Some progress has been made in the equity suit brought by the trustees under the company's mortgage of 1851, but it is not yet determined. Meanwhile the interest has been regularly paid by the lessees, on the outstanding bonds issued under that mortgage. The first loan of the credit of the city of Portland in aid of the Atlantic and St. Lawrence Railroad began to mature in December last. The steps taken and payments made upon the maturing instalments of the loan are stated in the annexed report of the commissioners of the sinking fund. With regard to the balances of instalments, not satisfied out of the sinking fund, satisfactory arrangements have been completed, under the legislative act of March, 1868, by which the city issues new bonds on its own account, to supply the deficiency, retaining, of course, all the essential securities which it had for the whole original debt, with the additional provision of a new sinking fund, adjusted at such rates and time of accumulation, that it will discharge the entire debt at maturity, if no losses occur—these arrangements being also so formed that they will apply in the same manner, and to a similar result with the second city loan, which matures in February, 1871. The report of the Treasurer gives the customary statement respecting the stock accounts and funded debt of the company.

ST. JOHN SMITH, President.

Portland, August 3, 1869.

TREASURER'S REPORT.

To the Stockholders of the Atlantic and St. Lawrence Railroad Company.

I submit my twenty-fourth annual report as Treasurer of the company, being for the year ending June 30, 1869. The capital stock issued is $2,494,900, divided as follows:

438 shares in Federal currency, of $100 each	$43,800
5,063 shares in sterling currency of $100 or $484 each	2,450,492
38 fractional share rights of $16 each	608
	$2,494,900

During the past year an arrangement has been made with the city of Portland in reference to their $1,500,000 loan, by which the 15,000 shares, previously reported as held by the city as collateral, and upon which no assessments have been paid, have been surrendered to the company, and the certificates cancelled, and are now unissued capital. Upon the Federal shares, two dividends of $2 per share have been paid at this office, and the dividends upon the sterling shares have been paid in London. The debt of the company has been reduced the past year £159,200, by payments to that amount upon the company's obligations to the City of Portland.

The total debt now is $3,324,800, consisting of obligations to the City of Portland for the 1st and 2d loans of their bonds	$1,340,800
Company's mortgage bonds of 1851	614,500
Company's sterling bonds of November 1, 1853, on 25 years, £100,000 at $4 84 to the £	484,000
Company's mortgage sterling bonds, 5-20, at $4.84 to the £, £182,900, equal to	885,236
Amount due on exchange of bonds	264
	$3,324,800

The lessees have promptly provided for the payment of the dividends, the interest on the debt, and the contributions to the sinking funds. They have also assumed and paid the excise tax of 5 per cent. on the company's mortgage bonds, thus giving the holders their full six per cent. interest.

CHAS. E. BARRETT, Treasurer.

Portland, July, 1869.

Erie.—Probable Dividend.

We hear from a source generally well informed, that the Erie Railway Company is now earning more than 5 per cent. per annum dividend upon its common stock after paying all interest, rents, and preference charges.

There is a talk of a cash dividend and a bonus in stock for the year just closing.

If a stock dividend be paid, the "Bears" will be most awfully pickled, for in that case every holder would be compelled to send in his shares for the purpose of claiming the stock bonus.

We only give the rumor respecting the dividend as we hear it, as being that current in best informed circles in London. We have no knowledge of the fact ourselves, but for the sake of the shareholders we shall be glad if it is well founded, and we shall not be surprised if it is.—*Herapath's Railway Journal*, Sept. 18.

Boston, Hartford and Erie Railroad.

The following gentlemen have been elected directors of this company for the current year: E. C. Sherman, Plymouth, Mass.; Henry L. Pierce, Dorchester, Mass.; John S. Eldridge, Canton, Mass.; Mark Healey, Lynn, Mass.; Henry N. Farwell, Boston, Mass.; Joseph W. Clark, Dedham, Mass.; James W. Converse, Boston, Mass.; James S. Whitney, Brookline, Mass.; George M. Bartholomew, Hartford, Ct.; William H. Chandler, Thompson, Ct.; Roger Averill, Danbury, Ct.; Wareham Williams, Norwich, Ct.; Edward Harris, Woonsocket, R. I.; Samuel Currey, Providence, R. I., and Henry Thompson, New York. At a meeting of the directors held in Boston, John S. Eldridge, Esq., was unanimously re-elected President; Samuel Hall, Jr., Esq., Treasurer, and H. S. Barry, Esq., Assistant Treasurer.

☞ The earnings of the North Carolina Railroad for the quarter ending August 31, 1869, were $122,182 44; and the expenses, $97,903 17—making the net earnings, $24,279 27. In the corresponding period of 1868, the earnings were $110,298 26, the expenses, $95,302 37, and the net earnings, $14,995 89. This shows an increase in earnings of $11,884 18, in expenses of $2,600 80, and in net earnings, $9,283 38. In the month of August, 1869, $9,350 44 were expended in the purchase of railroad iron.

☞ The earnings of the Marietta and Cincinnati Railroad for the nine months ending September 30, 1869, were $1,017,305, against $929,003, in the nine months of 1868—an increase of $88,302.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "†."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, October 9, 1869.

Stock Exchange and Money Market.

There has been much less activity in business in all branches, since our last, particularly at the Stock Board, and in the Gold line. Speculation has not thus far fully recovered from the very depressing influence of the explosion at the Gold Exchange on the 25th ult. There have been some further failures of importance announced, as the result of the fearful break down in market values in the financial line, and many houses have been very seriously embarrassed which have not been absolutely obliged to suspend payments, even temporarily. The settlements of the late enormous Gold operations have been progressing very tardily. There have been several injunctions issued, and extensive litigation of disputed claims has been threatened. Meanwhile, money has been accumulating at this point, chiefly in the form of balances, in quest of safe temporary employment, and the city banks report a general increase of their resources, including an addition of over 4⅛ millions to their legal tender reserve; over 2⅞ millions to their deposits, and nearly two millions to their specie hoard, while they have reduced their loan and discount averages about 8¼ millions. The U. S. Sub-Treasury also added considerably to its coin and currency balances, particularly the latter, which stood on Wednesday morning of the current week at over seven millions. On the 1st inst., the currrency reserve of the Treasury Department at all points was a little over 6½ millions, and the coin balance nearly 109 millions, of which latter amount nearly 24½ millions were represented by outstanding coin certificates. The demand for money has been less urgent from all sources, and rates have favored responsible borrowers, closing at 6@7, generally 7 per cent. on call to the leading street houses, and 8@10 per cent. per annum, on the best business paper, of short date. On Wednesday, the offerings of money were quite liberal, and the prevailing street rates were 6@7 per cent. currency.

The specie reserve of the city banks according to the latest return is $15,902,849, against $11,757,336 same time last year. The city bank deposits are now $183,124,508, against $194,919,177 week ending Sept. 26, 1868. The legal tender reserve amounts to $54,209,088, against $60,240,447 same time last year. The circulation now stands at $34,169,409, against $34,154,806 same time last year. The loans are now $255,239,649, against $269,533,868 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged about $132,148,962 a day, against a daily average of $164,879,069 the preceding week, and $110,403,298 the week ending with Sept. 18, 1869. The current week's exchanges average about $118,000,000 a day. The city banks, last week, reported an increase of $1,934,368 of specie, $2,893,715 of deposits, and of $4,184,007 of legal tender notes. They reduced their loans, $8,202,179; and increased their circulation, $173,328.

The city bank exchanges on Wednesday were $98,398,978.

On Tuesday of the current week, the annual election of officers of the New York Bank Clearing House Association was held, and the report of the Manager for the past year, was presented. According to the report, the total transactions of the Clearing House for the past year amounted to $38,527,347,294 42; the total transactions since its organization (sixteen years) amounts to $256,027,558,962 70; the average transactions per day, during the past year were $125,088,789 91, being $27,910,917 65 more than the average of any preceding year. The total exchanges for the year were $8,689,882,072 46 larger than any preceding year. The total capital represented by the Association is $82,720,000, of which $71,635,000 is represented by national banks, and $11,085,000 by State banks.

National Bank notes to the amount of $202,935 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $318,215,961, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $18,397,246, leaving, with the existing 1,620 banks, (having an aggregate capital of $422,659,260,) an actual circulation at this date, of $299,818,715. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,500,000; and for the public deposits, $19,518,000—

making a total of $362,018,000. The Treasury Department last week redeemed and destroyed $176,950 of worn and mutilated fractional currency, and issued $893,287 of new. The outstanding amount of fractional currency on the 1st of Oct., was $33,001,298 50, against $30,711,799 87, on the 1st of September, 1869.

The U. S. Sub-Treasury receipts, week ending with Oct. 2, were $8,222,914 in coin, including $2,687,000 from customs duties, and $10,041,758 in currency; payments, $6,649,988 in coin, including $517,581 of coin interest, and $7,820,521 in currency; balance at the close of the week, $91,989,034, including $82 231,676 of coin, and $5,874,285 of currency, against $89,459,979 at the close of the preceding week, showing an increase of $2,529,055. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $769,750 of coin, including $304,946 from customs, and $1,664,129 of currency; and payments, $1,129,228 in coin, including $29,000 of coin interest and $477,814 in currency. On Tuesday, receipts, $932,395 in coin, including $509,600 from customs, and $170,065 in currency; and payments $215,372 in coin, including $33,763 of coin interest and $227,679 in currency. The balance at the close of business on Tuesday stood at $89,729,337, (including $7,002,986 of currency, and $82,589,421 of coin,) against $89,110,833 a week previous; and $89,700,442 on Sept. 21, 1869. The aggregate receipts of the office in Sept. were $63,725,058, including $12,504,326 from customs; aggregate payments, $57,424,305, including $4,358,339 of coin interest.

The customs revenue of the port of Boston, last week, was $459,328. The cash balance of the Boston Sub-Treasury on Saturday, was $3,388,678, including $2,730,465 of coin.

The outstanding amount of coin certificates on the 1st of Oct. was $24,412,720, against $23,647,580 on the 1st of Sept. 1869. The Sub-Treasurer at this port, last week, retired $2,256,299 of coin certificates through the receipts for customs.

Government revenues have been on a moderate scale since our last. The excises yielded about four millions; customs at the port of New York, $2,687,000, and at the outports about $875,000 (in coin) more, making the grand total income for the week equal to about $8,631,600 in currency. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 50 millions.

Gold has been more regularly, though not very extensively dealt in, and the range of the price has been from 128¾@132, leaving off on Wednesday at 130½. The Gold Exchange Bank, had not been released from the control of the receiver up to that day, though it was announced in the interest of the institution that it had completed its account of its obligations and assets; and that it was in a position to satisfactorily liquidate all outstanding claims. The Gold Board business has been seriously interfered with, by the daily discussions of the members in executive session, of issues growing out of the late formidable operations. The speculative inquiry for Gold has been on a greatly reduced scale. The customs demand has been moderate. The export drain has not been equal to the import movement. On Monday, the *City of Brooklyn* steamship delivered here $1,170,000 in specie. The total exports of specie from this port, last week, amounted to only $262,106. On Tuesday of the present week, the *Westphalia* took out $220,000 in specie. On that day Government disposed of a million of gold at from 129.70@130.9 32. The bids reached $5,750,000. On Wednesday, the *China* delivered here equal to $820,000 in specie from Liverpool.

The coin balances of the Government at this port on Wednesday morning, amounted to a little over 82½ millions.

The customs of the port on Wednesday yielded $414,000. The U. S. Sub-Treasury disbursed $30,783 of coin interest, on that day.

The customs demand for Gold last week, averaged $447,833 a day; thus far, this week, it has averaged $407,273 a day, or equal to a weekly aggregate of $2,443,638. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $111,006, and since Jan. 1, $11,202,442, against $5,772,969 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $103,119,535, against $92,848,867 same time in 1868. At San Francisco, from Jan. 1, to Sept. 25, 1869, $6,116,831, against $6,344,035 same time last year.

The exports of specie, from this port, last week, were $262,106, against $283,123 same week last year; total, since Jan. 1, 1869, $26,923,036, against $66,386,537 same time last year. Government disbursed last week through the U. S. Sub Treasury here, on account of the coin interest on the public debt $517,581, and since Jan. 1, 1869, $69,315,243, against $63,630,013 same time in 1868. The specie exports from San Francisco, from Jan. 1, to Sept. 24, 1869, were $28,946,430, against $28,613,004 same time in 1868.

The U. S. Treasury receipts from customs at all ports from July 1, to Sept. 4, were about 50½ millions.

The amount of specie sent east by railroad from San Francisco, thus far, this year, has been $4,180,757.

There has been a livelier inquiry for foreign exchange, which has been offered less freely, and has been quoted decidedly firmer in price, closing buoyantly. Bankers' prime sixty day bills on London closed on Wednesday at 109@109⅜, and on Paris to 5.18¾@5.17½; sight bills on London to 109½@109⅞, and on Paris to 5.16¼c.@5.15. The offering of produce bills has been very extensive this week. The week's exports of domestic produce have been to the currency value of $5,011,442, making the total since Jan. 1, 1869, $146,691,726, against $126,054,048 same time last year.

Government securities have been in more request, with less violent fluctuations in values. The offerings of bonds have been on a comparatively liberal scale, largely on foreign account. The investment demand has been stimulated by the reduced prices, which have resulted from the depressing influence of derangements in business, caused by the wild Gold speculative operations of the week before last. The last exhibit of the Public Debt was quite favorable, having shown a further liquidation, for September, of $7,467,429, making the aggregate decrease of the national indebtedness, since March 1, $56,968,188, or over eight millions a month. The aggregate of the coin bearing debt is now $2,107,936,800; on the 1st of March last, it was $2,107,854,050. The aggregate of the currency bearing portion of the debt is now $125,725,320, against $125,077,000 on March 1st. The debt bearing no interest is now $413,528,662, against $421,578,180 on March 1st. In making up the account of the funded debt on the 1st inst., the bonds purchased by the Department, since March 1, amounting to over 51 millions, were not deducted from the recognized obligations of the Government. Of the amount, $16,125,159 were bought in on account of the Sinking Fund, and $34,625,963 to await the action of Congress. On Wednesday, Government bought in two millions of U. S. 5-20s at from 115.55@116.17, out of an aggregate offering of $9,714,750.

U. S. sixes of 1881 closed here on Wednesday at 119@119⅜; U. S. Five-twenties of 1862, ex-coupon, 119⅝@119¾; U. S. Five-twenties of 1864 at 118¾@119⅛; U. S. Five-twenties of 1865 at 119@119⅜; U. S. Five-twenties of 1865, consolidated, 117⅜@117⅝; U. S. Five-twenties of 1867, 117⅝@117¾; U. S. Five-twenties of 1868, 117½@117⅞; U. S. Ten-forties at 108⅛@108⅜, ex-interest; U. S. Six per cent. currency bonds, 107¾@108⅛.

The latest quotations at the London Stock Exchange compare as follows with former returns:

Railway and miscellaneous share property has rallied sharply in price, since our last, on a more confident demand for all substantial securities. There have been frequent fluctuations, however, and the market has shown more or less hesitancy from day to day. The easing up in money has tended to strengthen values materially. On Wednesday, the general market closed heavily and irregularly.

A moderate business has been transacted in most kinds of domestic produce, which closed generally with increasing firmness. Middling upland cotton closed about steadily on Wednesday at 27¾ cts. per lb. The stock of cotton now here is given at about 4,750 bales. The receipts at the port this week, have averaged about 1,300 bales a day. The receipts at all the ports, thus far in the year commencing with Sept. 1, 1869, have been 151,000 bales, against 105,000 bales in 1868–'9; exports, same time 21,000 bales, against 19,500 bales same time in 1868–'9; stock on hand at latest dates, 87,500 bales, against 78,000 bales same date 1868. The exports of domestic cotton goods from this port, since Jan. 1, have been 16,871 pkgs., against 16,312 pkgs., same time last year. From Boston, 6,241 pkgs., against 7,183 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in more demand, at from 9@16¼c., per lb.; week's receipts, 6,720. Milch cows very dull, at $40@$110 each, receipts, 80. Veal calves in fair request at from 7@12½c. per lb.; receipts, 1,592. Sheep and lambs in moderate demand at from 4@7c., and 7¼@9c. per lb.; receipts, 31,875 Swine in better request at 9¾@10¾c. per lb., a live weight; receipts, 18,571.

The week's dry goods imports were valued at $1,680,538, and of general merchandise, $3,702,066, making an aggregate for the week of $5,383,204 specie value, against $6,733,633 same week last year. A pretty fair trade has been reported in the leading articles, at in the main, well supported prices, though Sugars have yielded a fraction, on freer offerings.

The ocean freight market has been rather brisker, since our last, and rates have been quoted stronger. For Liverpool we quote flour at 2s. 3d. by sail, and 2s. 6d.@2s. 9d. by steamer, per bbl.; grain at 9¼d. by sail, and 10¼d.@10½d. by steamer, per bushel; cotton at $\frac{5}{16}$@$\frac{1}{32}$d. by sail, and ⅛d. by steamer, per lb.; and heavy goods 20s.@35s. by sail, and 30s.@50s. by steamer, per ton. Total number of vessels inport on Wednesday, 428.

The New York exports, exclusive of specie, for the week ending Oct. 5, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$3,072,568	$5,011,442
Prev. reported	122,981,480	141,680,284
Since January 1	$126,054,048	$146,691,726

The imports for the week ending October 2, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$2,403,015	$1,680,538
Gen. merchandise	4,330,618	3,702,666
Total for the week	$6,733,633	$5,383,204
Previously reported	186,894,124	231,029,525
Since January 1	$193,627,757	$236,412,729

The balance in the Sub-Treasury on Wednesday was $91,439,232 47.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—South Carolina 6s, new, 65; California 7s, 128; Louisiana 6s, 65; do., 6s, Levee bonds, 60; do., 8s, Levee bonds, 83; Illinois coupon bonds, 1879, 101; Alabama 8s, 91; Georgia 7s, 91; Brooklyn 6s, Water Loan, 92; do., Park Loan, 90; Kings County 6s, 91⅛; Central Pacific 6s, 92½; New Jersey Central 1st mort., 97; do., 2d mort., 99; Dubuque and Sioux City, 108; do., 1st mort., 90; Pacific R. ☞ Robert Hale has been chosen General Superintendent of the Missouri Pacific Railroad, in place of H. C. Moore, resigned.

Memphis, El Paso and Pacific Railroad.

We are authorized to state that the American Ship Saint Cloud, laden with railroad iron for the foregoing road, sailed from Antwerp for New Orleans on the 6th instant, that another cargo will follow on the 9th, and still another on the 20th instant.

The first train of cars transporting the rails for this road from Mauberge to Antwerp, was decorated with flowers by the workmen, and a *grand fete* was gotten up in fine style for the occasion.

The Chief Engineer of the road telegraphs from Jefferson, Texas, that eighty miles of earthwork are ready for laying down the rails, which will soon be on the ground.

The contractors, we are informed, expect to have over, 2,000 hands at work on the line as far as Paris, in Lamar County, by the 1st of next month, and 500 Chinese laborers besides, before 1st of December.

We are satisfied this will be gratifying intelligence to the friends of the 32nd parallel, or Southern Transcontinental, line from Norfolk to San Diego.

Rondout and Oswego Railroad.

At the recent annual election for directors of this company, the following gentlemen were chosen: Thomas Cornell, Hiram Schoonmaker, John C. Brodhead, Lewis N. Heermance, Jas. G. Lindsley, E. B. Newkirk, N. W. Watson, B. G. Morse, R. T. Hume, F. R. Gilbert, E. J. Burhans, I. W. Longyear, O. M. Allaban. Thomas Cornell was re-elected President; John C. Brodhead, Vice President; H. Schoonmaker, Secretary; A. Benson, Treasurer.

Booth Safety Rail.

The Rochester (N. Y.) *Chronicle* says that the "Booth Patent Safety Rail" enjoys undoubted success, as the result of trial for 2½ years on different roads. It has worn out eight sets of common iron rails, and there is no prospect of wearing it out in 50 years on any main track. Among large iron companies that have arranged to manufacture it, are the Cleveland Rolling Mill Company and the Union Rolling Mill Company, both of which have every facility for manufacture, making both the iron and steel from the ore.

☞ PACIFIC RAILWAY GOLD LOAN, $6,500,000. A seven per cent. land grant, railroad, first mortgage bonds, having thirty years to run. Interest and principal payable in gold. Coupons payable semi-annually in London, Frankfort and New York. Circulars, maps and pamphlets sen on application. The bonds for the present are sold in currency at 95, with accrued interest. DABNEY, MORGAN & CO., 53 Exchange Place. M. K. JESUP & COMP'Y, 12 Pine street.

☞ The Keystone Bridge Company have contracted to build a first class "Linville and Piper" Patent, wrought iron (truss) bridge over the Wabash at Terre Haute, for the new St. Louis, Vandalia and Terre Haute road. The bridge, 830 feet long, is to be of five spans, 166 feet each—one of them a pivot span.

☞ Work on the Ware River (Mass.) Railroad is making good progress, and it is now thought that by the first of January next the whole route will be graded.

Imports of Dry Goods.

The imports of foreign dry goods at New York for the month of September, were:

ENTERED FOR CONSUMPTION.

	1868.	1869.
Manufactures of wool	$2,067,178	$1,638,162
" cotton	819,329	844,444
" silk	2,815,399	1,683,889
" flax	187,589	752,315

Total entered at the port	$66,172,745	$79,152,345

Bridge at Prairie du Chien.

We learn from officers of the Milwaukee and St. Paul Railway that the erection of a magnificent bridge across the Mississippi at Prairie du Chien has been determined upon, and that work will be commenced the ensuing winter. It will be a high bridge, above the smoke-stacks of the largest steamers, and so constructed as not to obstruct navigation in either channel. The bridge will probably be completed in less than a year.—*Mil. Wis.*

Movements of Produce.

Receipts of certain articles of domestic produce at the port of New York during the first nine months of the year:

	1868.	1869.
Ashes, bbls.	4,957	7,216
Breadstuffs—		
Wheat flour, bbls.	1,725,620	2,211,011
Cornmeal, bbls.	228,499	167,127

☞ The Newark *Advertiser* understands that the Long Branch and Sea Shore Railroad has just passed into the control of the Delaware and Raritan Bay Company, to which it has always been a formidable rival in the Long Branch business.

Journal of Railroad Law.

RAILROAD CORPORATIONS—RIGHT OF EMINENT DOMAIN—PERMISSION TO OCCUPY LANDS.

The facts of the late case of Deitrich *vs.* Murdock (42 Mo., 279,) are fully and clearly stated in the following opinion by

FAGG, J.—The case presented by the record shows the following state of facts: The suit was instituted by the defendant in error, in the Circuit Court for St. Louis County, for the possession of a quantity of railroad iron claimed by him in pursuance of a purchase of the same from the Callaway Mining and Manufacturing Company. This iron constituted part of the track of said company's road, laid upon the land of Kowns, or of the plaintiffs in error. In 1859 these rails were taken from the road bed by Kowns, and shipped to Murdock & Dickson, at the city of St. Louis, to be sold by them for his benefit. This company being authorized by the terms of its charter to build a railroad from its coal bank in Callaway County to the Missouri River at or near Cote Sans Dessein, proceeded in the Spring of 1851, to acquire the right of way for that purpose. A jury consisting of six men, as directed by the act of incorporation, was summoned by the Sheriff of that county, and with the County Surveyor, proceeded to locate the line of the road and assess the damages to the lands upon which it was to be constructed. A certificate of their proceedings was filed in the office of the recorder of deeds, for the county, and a certified copy of the same was offered in evidence at the trial on the part of the plaintiff.

The paper to be admitted against the objections of the defendants below, presents the first question to be passed upon here.

The objections do not appear to have any reference to the competency of the evidence, but rather go to the sufficiency of the statements to prove that the jury proceeded to discharge its duties in the manner required by the charter. There being no objections to its competency, the Court committed no error in permitting it to be read. This is all that need be said upon that point. The next objection on the part of the plaintiffs in error is the refusal of the Court to give the following instruction: "The law is declared to be that the proceedings of the jury convened to condemn the road bed and depot of the Callaway Mining and Manufacturing Company do not appear to have been in accordance with the charter, and that the same are inoperative to divest the title of any owner to the said road bed."

The Legislature in the exercise of its discretion in delegating to this company the right of eminent domain, evidently proceeded upon the idea that the public interest was to some extent at least to be subserved by its creation. What the precise degree of its usefulness to the public might be, is not, in our view of the case, necessary to be determined.

We think that the Courts of the country ought not to interfere with the exercise of this discretion, except in those cases where it is manifest that private interests alone are to be promoted, and private rights violated to the extent of taking the property of one individual and transferring it to another. The sixth section of the act under which this company claimed its corporate exist-

ence declares that "said company shall have the exclusive power to acquire, own, and employ steam power, or animal power, locomotives, cars, and carriages necessary for the transportation of passengers, coal, and every description of personal property on said road for themselves and other persons."

Whether the private interests of this company were such as to require the construction of this road, or constituted the main reason for the act of incorporation, with the power conferred by it, is not material. It is enough that, by the terms of the law, it is made a public corporation for the use and benefit of that particular section of the State. The public had a right to demand that the means of transportation, both for passengers and freight, commensurate with its wants should be provided by the company. Any failure of its duty to the public in this particular, and to transport passengers and freight when offered for that purpose, would have subjected the company to an action for damages. It must be assumed, then, that the grant of authority to the company to condemn the land necessary for a road bed was a rightful exercise of legislative discretion. We do not consider it to be necessary in this case to go further into an examination of the questions raised on the part of the counsel for plaintiffs in error. We pass by the question as to whether the regularity of the proceedings of the jury can be made the subject of a collateral investigation.

It might be admitted, for the sake of the argument, that all the irregularities complained of do, in point of fact, exist, still, there is no ground upon which Kowns can rightfully claim to be the owner of the property in question. The condemnation of the ground for the proposed road, and the location of the route, were made in the Spring of 1851. The company proceeded to construct and operate the road, which is admitted to have been located upon the land owned by Kowns. The report of the attempted condemnation of the property, such as it is, was duly filed in the recorder's office, and this constituted all that was required of the company by its charter. Now, whether these proceedings were sufficient to divest the title of the owner of the land upon which the road was located or not, or whether Kowns thereby had any notice of an intention on the part of the company to take any portion of his land, is not material. There was no attempt on his part to prevent the execution of the work.

The company was not proceeded against as trespassers, nor in any other form by which his rights might have been asserted and the authority of the company to proceed with the work inquired into. Here was a period of seven or eight years intervening between the initiatory steps taken for the location and construction of the road and the time at which this property is taken possession of by Kowns, without a word of dissent upon his part, and without any claim to the iron. It must be assumed that the occupation of this land by the company for the purposes to which it was applied was assented to by him. Being thus permitted to occupy the land, the law would protect the company in the enjoyment of any property used in connection with such occupation, and, if compelled to leave the premises by proper proceedings, would permit such property to be removed. (See Desloge *et. al. vs.* Pearce *et. al.* 38 Mo., 588, and cases there cited.)

The instruction was properly refused, and the judgment must be affirmed. The other judges concur.

Northern Pacific Railroad.

A correspondent of the *N. Y. Herald*, writing from Bozeman City, Montana, under date of September 8, 1869, says:

The Northern Pacific Railroad party sent out to examine the various routes proposed between the Yellowstone river (thirty-five miles east of this place) and the Walla Walla Valley and Washington Territory have concluded their observations, and set forth this morning on their return to the East. Prominent among them I may mention Thomas H. Canfield, Burlington, Vt.; W. M. Roberts, St. Louis, Mo.; W. T. Johnson, Middletown, Conn., and a nephew of Jay Cooke, of Philadelphia, the president of the company. Until the discovery of the precious metals in Montana and the partial settlement of the leading agricultural valleys in consequence the majority of those who had given thought to the subject of a transcontinental railroad supposed the most feasible route would be found to mainly bear north of the Missouri river, descending to the southward from a point west of Fort Benton, and passing over the main range through Cadot's Pass, sixty or seventy five or eighty miles northwest of here. That opinion was natural enough, as all important government surveys and explorations had been made along those upper latitudes, and comparatively little was known of what are now the most wealthy and populous portions of Montana. The practical facts are now presented to the world that several miners' ditches on this latitude convey water from the eastern to the western slope; that the main range may be considered broken down to a dead plain at the Big Hole, Jefferson and several others passes west of this city; in short, that the pioneer farmers and miners of Montana have discovered and settled in and around lower depressions in the Rocky Mountain range than have ever been found by the topographical parties sent out by the general government. The route of the Northern Pacific Railroad so far as Montana is concerned, is then—such, I believe, being the expressed conviction of the gentlemen whose names I have given—described as follows:—Up through the Valley of the Yellowstone to Spring Canyon (between the waters of the Gallatin and the Yellowstone); through this canyon to this point, being on the head waters of the Gallatin; down the Gallatin to the Three Forks, or where the Madison, Jefferson and Gallatin, uniting, form the Missouri; up the Jefferson's waters to the Big Hole or Deer Lodge Pass; through one or the other to the Deer Dodge Valley, on the western slope; down the Deer Lodge to the Bitter Root; the Bitter Root to the Hell Gate; thence to Clark's Fork of the Columbia, and on through the best agricultural districts to Portland, Oregon, or some point on Puget Sound.

This route is as direct as the routes surveyed respectively by Stevens, Mullan and McClellan, and passes from the eastern boundary of Montana to the western, through our widest and most fertile valleys, and is immediately on line with the mineral belts, over gold, silver and copper ledges and best placer fields. The truth is, the company cannot build the road by any other route; an imperative financial necessity impels its adoption. From their land grants of alternate sections of forty miles on either side of the road must be derived the means of construction, as they receive not a dollar in the way of bond subsidies. They must choose the route through regions at the present time available for sale and settlement. Would emigrants cross and leave behind them the chain of fertile valleys of which this (the Gallatin) is the second most important link—the Yellowstone standing at the head—turning their backs on all our rich mines of gold, silver and copper, for homes away up north, where a furrow has not yet been turned, and there is no hope of markets for the fruits of their industry for years? Such a supposition is absurd. Taking it for a fixed fact, then—as we certainly fairly can—that the route described will be the line of the second great transcontinental railroad, information concerning the climate, soil, etc., of the regions traversed must be valuable and interesting. As regards the Gallatin, Jefferson, Deer Lodge, Hell Gate, Bitter Root and Clark's Fork valleys, their adaptability to grain growing and grazing have been sufficiently proven by successful tillage and stock raising in them for the last six years. On the spontaneous grasses herds fatten the year round, cattle often being driven from the unenclosed ranges to the butchers' stalls in mid-winter, and making fat, sweet and nutritious beef, and better wheat, oats and barley crops than are now being harvested in the valleys of the Gallatin. Deer Lodge and Bitter Root were never grown over the same extent of ground anywhere in America. The six valleys include a cultivable area, probably of 50,000 square miles; in each there is still room for thousands of farmers, distributing among them quarter section tracts. Owing to the hostility of the Sioux and Crow Indians and unwise treaty stipulations of the government with these savages no permanent settlements have been made on the Yellowstone, but it is our most extensive and probably most fertile valley. I regret the railroad party which has just departed did not extend their observations further in their duration. Last year I spent several weeks in the valley, traveling constantly, which enables me to give your readers many reliable facts. The bottom lands vary in width from one to twenty miles, and almost every acre is reclaimable to cultivation, as is evinced by the rank growth of wild rye and nutritious grasses which extend from the pine forests of the mountains down to the rich vegetable mould margining the river. The uplands are certainly adapted to the production of all the cereals, save corn; and all the esculent roots and vines, and perhaps the excepted grain would do well on the lowlands. The atmosphere is very perceptibly more humid, and rains, I am told, are more frequent than on the slopes of the main range further west. The seasons would probably be exceptional when irrigation would be necessary. I think this is substantiated by the character and condition of the vegetation. The variety is greater and the growth more vigorous. On the bottoms willow, elder, thistles, hops, mint, sorrel, fennel, peas, clover, currants, gooseberries, serviceberries, a score of species of the thorn, and a myriad other stalworth plants and shrubs, in giving whose botanical classification I will not encroach upon your space, grow so profusely as to remind one of old tillage ground which has been abandoned to spontaneous production. Cottonwood frequently attains to three feet in diameter, while the "choke-cherry" loses its usual modesty, and towers up with tree-like pretensions.

I have traveled through the Rocky Mountains from here to the Gulf of California, and never saw any portion better watered than this; there is scarcely a section of land in the Yellowstone valley, such portions as I have traveled through, that cannot, if necessary, be irrigated. The mountains are jewelled all over with springs as cold and clear as crystal ice. These countless fountains, uniting their currents above, come brawling down through canyons and splashing over ledges, traversing the main valley like huge ribbons of silver. Noble pines, fringe the brows of the mountains, cottonwood groves line all the streams, the land is gently rolling, the soil rich and deep, and springs and spring-fed brooks flash to the view whichever way we turn. Such is the great valley of the Yellowstone destined ere long, as I firmly believe, to be filled with all the arts, embellishments and comforts of civilization.

☞ The Boston *Advertiser* says a company of engineers are now making a survey from Athens (Me.) to Skowhegan by the way of East Madison Lower Mills. Last week the same party made a survey from Hartland to Athens. Hereafter a survey will be made on a line near the New Road, so called, between Skowhegan and Athens.

Boston, Barre and Gardner Railroad.

The meeting of the stockholders of this road was held at Worcester, Mass., on the 30th ult. From a financial statement made, it appears that the company were authorized to begin the construction of the road, which is divided into three sections, as soon as $200,000 had been subscribed for each section, and 20 per cent. of that amount paid in; but to make sure of sufficient funds, and in view of the high prices of labor and material, the directors proposed to raise by subscription $600,000 for building the two sections from Worcester to Gardner, and proceed at once to the construction of it, and the sum named has been subscribed. Several contractors have the work under consideration, one of whom, Mr. Field, of Greenfield, thinks the road can be built for less than $600,000. The directors were instructed to make an assessment on the stock subscribed, payable in twenty days. Col. Ivers Phillips, of Worcester, is President of the road, and Mr. William E. Starr, of Worcester, Secretary and Treasurer. The directors pledge themselves to raise $100,000 to build the Barre Branch, whenever Barre and the towns benefited thereby will come up with a corresponding amount.

Memphis, El Paso and Pacific Railroad.

A despatch dated San Francisco, October 2, says that the engineers of the Memphis and El Paso Railroad have commenced operations at San Diego. Mr. Epperson, the President of the Memphis road, has ratified the contract of Colonel Sedgwick, agent of the San Diego and Gila Railroad Company, for a consolidation of the stock and lands of the two companies. The consolidation gives $500,000 to the San Diego Road, and the stockholders of the latter road receive stock in the consolidated company.

☞ Articles of association of the Cincinnati and St. Louis Straight Line Railroad Company have been filed at Indianapolis. The company propose to construct a road from Worthington, on the Vincennes road, through Bloomington and Columbus to the Indianapolis and Cincinnati Railroad, between Greensburg and Lawrenceburg.

☞ In the first quarter of the present year the 11 great Indian railway companies earned £1,633,071 upon a mileage of 4,090¾ miles, against £1,324,862 on 3,926¼ miles for the first quarter of 1868, showing an increase of £308,209 and 164½ miles.

☞ The Taunton branch of the Boston and Providence Railroad has never passed a dividend. When it was completed at a cost of $225,000, the Boston and Providence road declined to lease it for 99 years at $10,000 annually; it now receives from its business $120,000 a year.

☞ The Ranegunge coal field, whence the chief portion of the coal raised in India is derived, last year yielded 547,971 tons, against 479,233 in 1867, showing an increase of 68,738 tons. This coal is used as far as Umballa, and one-half of it is consumed by the East Indian Railway Company.

☞ The earnings of the Cincinnati, Sandusky and Cleveland Railroad for eleven months ending August 31, 1869, were $729,538 68; and the expenses, $376,250—leaving the net earnings, $353,288 68.

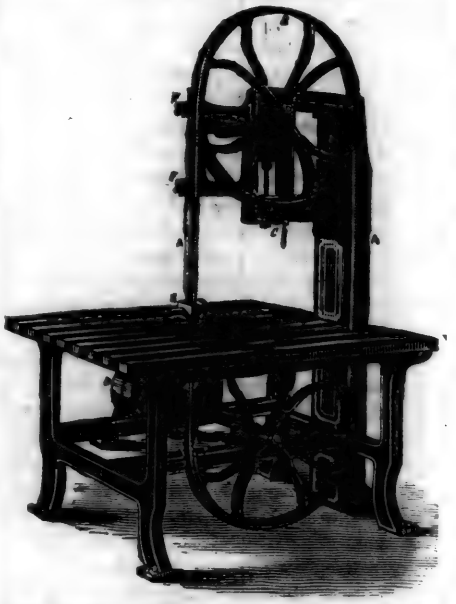
☞ An application will be made at the next session of Parliament for a charter for the Union Pacific Railway to be constructed from a point on Lake Superior *via* the Red River to a point on the eastern boundary of British Columbia, with power to improve the navigation leading to and from Rainy Lake and Lake of the Woods; also for a charter to run a railway from Pembina *via* Fort Garry to a point on Lake Winnepeg or Saskatchewan River, with power to improve the navigation to Saskatchewan.

☞ During the present season extensive repairs have been made on the New Brunswick and Canada Railway; 20,000 new sleepers have been laid, also 150 tons of new rails and $2000 worth of steel joints. Twelve new platform cars have been built and extensive repairs made on some of the engines.

☞ The income of the Hartford and New Haven Railroad for the year ending August 31, 1869, was $1,811,682, and expenses $1,263,468 leaving a net income of $548,219, which is $66,628 greater than that of the year before. The passengers carried numbered 1,088,655, and the tons of freight 463,316.

☞ A movement is in progress for a railroad up the Androscoggin Valley, from Lewiston to Rumford Falls, Me. The preliminary survey has been made, and as there will be no bridges of any account to be built, the road will not be expensive.

☞ Ground has been broken on the Portland and Ogdensburg Railroad, and men are at work on the section near the trotting park, at Portland. A heavy force will be put on the whole division to Sebago Lake as soon as shanties are built for the men.



SEMI-BITUMINOUS COAL,
From the Mines of the
CUMBERLAND COAL AND IRON COMPANY,
Deliverable at the Ports of
GEORGETOWN, BALTIMORE AND NEW YORK,
FOR SALE BY THE CARGO.
Orders received at the office of the Company,
90 Broadway, corner Wall street,
WM. M. RICHARDS, President.

Interest on City Stocks.

THE INTEREST ON THE BONDS AND STOCKS of the City and County of New York, due and payable Nov. 1, 1869, will be paid on that day by Peter B. Sweeney, Esq., Chamberlain of the City, at his office in the new Court-house.
The transfer books will be closed Friday, Oct. 1, 1869.
RICHARD B. CONNOLLY, Comptroller.

FIRST & PRYIBIL'S
PATENT IMPROVED
BAND SAW MACHINE,
452, 454 & 456 Tenth Avenue,
NEW YORK CITY.

This Machine, with the exception of the table, is made entirely of Iron. Its weight is 1800 lbs.; drums 3 feet 3 inches in diameter; height, 8 feet 5 inches; depth 4 feet 3 inches; width 6 feet; driving pulleys usually 14 inches in diameter, or to suit our customers.
Our machine can be run with a speed of 330 to 350 revolutions per minute, causing the saw to travel 3300 to 3500 feet per minute, and with a belt from 4 to 5 inches in width a block of Rosewood from 10 to 15 inches thick, or wood of any kind, hard or soft, can be cut with ease and facility, the saw being from one-quarter inch to one inch in width. A saw one-eighth of an inch in width, including teeth, can be used for cutting wood of considerable thickness.
The saws are not liable to break owing to our improved slide bearing, which adjusts itself according to the expansion and contraction of the saw. No saw will break except by accident or gross carelessness. The same is used principally by railroad car, chair, and other furniture manufacturers, ship, boat, and wagon builders, and also to saw slate, ivory, bone, &c. Guarantee will be given for all we state above. From three to five times as much work can be done with one of our sawing machines, as with an ordinary up and down saw. The work is cut smooth, the saw being retained by an improved guard.
At the present time, Sept. 1869, 64 of our machines are running in this city, and about twice as many in the country.
We also manufacture a lately patented counterbalance oval turning lathe which can be run with more than twice the speed of the old style of lathes, and much more and better work will be done. Many other wood working machines, and also shafting, pulleys, hangers, &c., &c., constantly on hand. Send for Circulars.
PRICE, $350. BOXING AND SHIPPING, $10.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

BURLEIGH'S PATENT
Pneumatic Rock Drill

Is now in successful working operation in New York, Chicago, Jersey City; also at the Hoosac Tunnel (Mass.) Lake Superior, Colorado and Nova Scotia Mines, Union Pacific and Boston and Hartford Railroads; also in deepening the beds of the Illinois and Michigan Canals, and Des Moines Rapids, and numerous other localities.

The Burleigh Drill is adapted to all kinds of rock cutting in open cut Mining, Tunnels, Sewers, Quarries, &c., drilling holes from 1¼ to 5½ inches in diameter. The Drills are worked either by steam or compressed air. For all kinds of work under ground compressed air is used, serving as a perfect ventilator, as it is exhausted from the Drill. At the Hoosac Tunnel the compressed air is carried upwards of a mile and a quarter, and at that distance works eight Drills at the same time. Information in regard to the ownership of the different State rights. Prices of Drills, Air Compressors, &c., can be obtained at the office of

Erie Railway.

The Annual Meeting of the Stockholders of this Company for the election of Directors was held at the offices of the Company in this city, on the 12th inst. Previous to the election, the old Board assembled and adopted the following Resolution:

Whereas, the Legislature of this State, at its last session, passed an act authorizing the directors of this corporation to classify themselves so as to hold office for various terms.

Resolved, That the propriety of such classification be submitted to the annual meeting of the stockholders of this company, so that they may have an opportunity of determining its efficiency.

Immediately thereafter, and before the election of the new Board of Directors, the stockholders assembled and adopted the following resolutions:

Resolved, That this corporation hereby accepts the amendment to its charter made by an act of the Legislature of the State of New York entitled "An act to amend chapter 278 of the Laws of 1868 entitled an act in relation to the Erie, New York Central, Hudson River and Harlem Railway Companies," passed May 29, 1869, being chapter 916 of the Session Laws of 1869, whereby the directors of this corporation are authorized to classify themselves so that as nearly as may be one-fifth of their number shall go out of office at each annual election.

Resolved, That the board of directors this day elected be and are hereby required and directed to classify themselves in accordance with the act aforesaid.

The election for directors was then held, and resulted in the choice of the following gentlemen: Jay Gould, James Fisk, Jr., William M. Tweed, Frederick A. Lane, Alexander S. Diven, Justin D. White, John Ganson, Orlo W. Chapman, Horatio N. Otis, Charles G. Sisson, Abram Gould, Homer Ramsdell, Henry Thompson, John Hilton, Henry N. Smith, M. R. Simons, George C. Hall.

At a subsequent meeting of the new board of directors, JAY GOULD was elected President, and JAMES FISK, JR., Vice President. H. N. OTIS holds over as Secretary, and the appointment of MORTIMER SMITH as Assistant Secretary, was confirmed. JAY GOULD continues to act as Treasurer.

The new board then proceeded to classify themselves in accordance with the act passed at the last session of the Legislature. The following classification was agreed upon:

Homer Ramsdell, Charles G. Sisson and J. D. White, to go out of office October, 1870.

John Hilton, M. R. Simons and Geo. C. Hall, to go out in 1871.

John Ganson, O. W. Chapman and Henry Thompson, to go out in 1872.

Alex. S. Diven, H. N. Smith, Abram Gould and H. N. Otis, to go out in 1873.

Jay Gould, James Fisk, Jr., Wm. M. Tweed and Fred. A. Lane, to go out in 1874.

The new board also adopted the following resolution:

Resolved, That the President be instructed to carry out the policy which the Executive have inaugurated; that he be directed to proceed at once to carry into effect the contract with the Lake Shore and Michigan Southern Railroad for a narrow-gauge through-line for passengers and freight to Chicago and the West; and that he be authorized and directed, for the completion, finishing and operating the road, to issue and the Secretary be authorized to attach the corporate seal to $5,000,000 bonds, to be called the "Narrow-gauge sinking fund bonds," secured by the proceeds of the traffic of such narrow gauge as is provided for in such contract.

☞ Col. Nathan Adams, of Stanton Depot, Hayward Co., Tenn., has been elected President of the Memphis and Ohio Railroad Company.

Illinois Central Railroad.

The statement of this Company for the month ending Sept. 30, 1869, is as follows:

LAND DEPARTMENT.

Acres Construction Lands Sold	4,535.02 for	$42,214 12
Acres Int. Fund Lands sold	240.00 for	3,176 80
Acres Free Lands sold	1,346.06 for	21,842 11

Increase		$20,753 34
Estimated earnings in the month of Sept., on the D. & S. C. R. R., not included above		$153,834 65
Corresponding month of 1868		$133,066 49
Increase		$20,768 16

Central Pacific Railroad.

All doubts of the success of the Pacific Railroad as a business investment—apart from its national benefits—seems to be disappearing, under the returns of this summer's traffic, the first of its complete operation. The earnings of the Central Pacific Railroad (the portion west of Salt Lake) are close upon $600,000 in gold for the month of September; and have averaged since the opening of the line $7,000,000 a year, *equal to between nine and ten millions in currency*. It is remarkable, also, that fully 70 per cent. of this was from local business, and that not more than 55 per cent. is consumed in operating expenses. The net profit of this company alone may be set down at something over $3,000,000 gold, while their interest liabilities are barely $1,000,000. There are not half a dozen corporations in the country whose aggregate revenues or surplus earnings are so large as this

new enterprise, which only a few years ago was a thing of hope and conjecture.

Hartford and New Haven Railroad.

The earnings of this road for the years ending August 31, 1868 and 1869, were as follows:

	1868.	1869.
From passengers.....	$891,091 20	$978,830 50
" freight.....	632,454 06	774,786 80
" expresses	114,709 50	56,309 41
" mails	55,627 28	23,754 48
" rents, etc.....	3,452 35	8,001 01
	$1,697,334 39	$1,811,682 20
Expenses, viz:		
Repairs of road and bridges	$326,427 99	$312,837 50
Wood, coal and oil .	96,318 14	111,102 02
Material and labor on engines and cars, and new cars and engines	224,888 38	248,646 91
Transp. account and general expenses.	325,867 95	347,886 94
Station repairs and improvements.....	48,009 83	55,227 82
Lost and damaged goods, gratuities, etc.....	3,472 79	7,677 36
	$1,024,935 08	$1,078,378 55
Net earnings	$672,399 31	$733,303 65
Interest and taxes ...	190,808 50	185,084 24
Balance	$481,590 81	$548,219 41

Compared with the previous year, the gross earnings of 1868-'69 show an increase of $114,347 81, with an increase in expenses of $53,443 47—making the increase in net earnings, $60,904 34. The balance remaining after the payment of interest and taxes is $66,628 60 more than that of the preceding year. The gross receipts from passengers exceed those of the previous year by $87,739 30. The receipts from transportation of freight exceed those of the previous year by $112,332 74. The receipts from express companies are $58,400 09 less than those of the previous year, for the reason that for the first seven months of that year, the company was running a daily express freight train for the sole accommodation of the express companies, while for the year just past it has been furnishing to those companies only the facilities afforded by its regular passenger trains. The receipts for mail service are $31,872 89 less than those reported from that source one year since, for the reason that the amount then reported included a sum of about $35,000, received in that year, for services previously performed. The Report says:

The common rails laid upon the road previous to the last year, have during the year just past continued to fail in an increasing ratio, consequent upon the increased service to which they have been subjected; and it is quite apparent that all the rails of the old quality and pattern will of necessity be replaced during the coming two years. For all rails laid during the present season, we have adopted a new pattern, weighing sixty-two pounds to the lineal yard, and of a form better adapted to the spliced joint, and of the best quality of iron rail we could buy. We have put on the road since the date of our last report, 2,600 tons of rails of improved quality and increased cost, and have 500 tons of similar character, received since the close of the fiscal year, now being laid. A still larger outlay per year on this account will be required during the next two years.

A large amount of work has been done during the past season in rebuilding culverts, cattle guards, and small bridges, with substantial and permanent stone masonry, in place of those originally constructed of brick or perishable stone, which has shown such evidence of decay as to make their renewal imperative.

We have added to the rolling stock, three new locomotives, and twenty-five new freight cars, and have rebuilt, with raised roofs, nearly all the remaining passenger cars of this company of the old pattern.

There have been made during the year large additions to the cars of the New York and Boston line, among which are four elegant drawing room cars, six first class passenger cars, baggage and postal cars, and the purchase of the remaining half of the sleeping car property, the whole of which now belongs to the line. Our proportion of these additions, 62-234, has been paid, and with the cost of additions to our own equipment, is included in the amount charged for repairs of cars and engines.

A material addition to our stock of passenger cars will be required during the coming year. Our present stock is barely sufficient for our daily business, leaving scarcely any provision for any extraordinary occasion. A large number of freight cars will also be indispensable.

A new wharf, one thousand feet in length, is in course of construction at New Haven, and now nearly completed. This structure, with four buildings upon it for receiving coal from vessels into bins, from which the coal can be drawn into cars, has been provided for the purpose of facilitating the discharging of coal, and relieving the pressure and consequent claims for demurrage which frequently occur at that place.

We have executed contracts with the General Post Office Department for the transportation of the mails on our main line and branches for the term of four years from the 1st of July last. The compensation allowed by the laws of Congress for the mail service is not, in our judgment, at all adequate to its value. Yet the convenience of the community on which we rely for the sources of our other business is so largely involved in the subject of frequent and prompt delivery of the mails, that we felt constrained to accept the offer made by the department, which under the present provisions of the law, is perhaps fairly in proportion to that paid to other roads.

The several contracts made between this company and the New York and New Haven Railroad Company some twenty years since, expired by their own limitation on the first of July last.

Our connections of trains, and other arrangements for facilitating the joint business, have continued, as heretofore, under agreements, without specific limitation as to the term of their duration.

No decision has yet been reached upon the suits now pending between the two companies. We are informed that the case in the Court of Appeals in the State of New York will probably be reached within the coming year.

The time now fixed by the by-laws for holding the annual meeting of this company is found, by experience, to be extremely inconvenient, the fiscal year terminating on the 31st of August, it is with extreme difficulty that all our accounts, and especially those with so many connecting roads, can be adjusted, and then submitted to the auditors, in time for the annual meeting in September.

We are obliged by law to make report to the Legislature of Massachusetts for the year ending 30th of November, and another report to the General Railroad Commissioners of Connecticut. All the details required by these reports would be obtained in making up our report for the annual meeting of our stockholders, if our fiscal year should terminate on the 30th of November in each year, and the annual meeting of the stockholders be holden in the month of January thereafter, thus giving an entire month for the proper preparation of these several reports, and the necessary examination by the auditors. We recommend the passage of a resolution, which will be submitted, to effect these changes.

The people of the town of Suffield, being desirous of securing more convenient railroad facilities, procured in 1868, a charter authorizing them to construct a railroad from some point on this company's road near Windsor Locks, to the village of Suffield, a distance of about 3¾ miles, with power to unite, lease, or merge their road with that of this company. Subsequently they proposed to this board that the people of Suffield would furnish the right of way and a bonus of twenty thousand dollars to this company, if the company would agree to build the road, and thereafter operate it in connection with this road. The board after a careful examination of the subject, were of opinion that the interests of this company would be promoted by the acceptance of this proposal, and therefore accepted it in behalf of the company. The people of Suffield have substantially complied with the terms of the proposition, and the work of building the branch has been let and commenced. This branch will, like those to Middletown and New Britain, be merged in this company at the proper time. The necessary resolutions for this purpose will be submitted for your action.

The Legislature of Connecticut, at its recent session, authorized an increase of the capital stock of this company to the extent of three millions of dollars, upon the representation that the bonds of the company, amounting to nearly one million dollars, were soon to mature, and the company would need to have power to dispose of stock to take them up; and further, that the business of the company was increasing so rapidly, that large outlays had become necessary in all its departments to fit the road properly, to meet from time to time this constantly increasing demand on the road and its equipment, and especially that it had become necessary to adopt a heavier pattern and higher cost of rails, to sustain so heavy a traffic as the track is now subjected to, and that this renewal of rails is now imminent, and can not be provided for at once out of current earnings. This act will be submitted to you for approval and acceptance, with such suggestions as the board may have to make as to the disposal of the stock in case of its acceptance by the stockholders.

A quarterly dividend of five dollars per share, free of Government tax, has been declared, payable on the 1st of October.

The number of miles run by passenger trains during the year was 327,423; by freight trains, 202,249; by other trains, 83,913—total miles run, 613,585, which exceeds the number for the previous year by 37,587. Number of passengers carried, 1,038,665. Tons of freight carried, 463,316. Increase in passengers, 104,844. Increase in freight, 83,193 tons.

The income of the company from all sources during the year was as follows:

Cash on hand September 1, 1868...	$170,573 87
Earnings of the road, as above.....	1,811,682 20
Sale of shares of stock.....	11,252 00
Real estate.....	425 00
Total.....	$1,993,933 07
Thus accounted for—

Superintendent.—E. M. REED.

Eastern (Mass.) Railroad.

The receipts of this company for the fiscal years ending November 30, 1867 and 1868, were as follows:

	1867.	1868.
From passengers	$957,833 54	$978,405 95
" freight	348,844 53	397,651 13
" parcel post & car.	32,496 39	34,613 73
" extra baggage	1,247 47	1,472 47
" U. S. mail	10,934 73	12,387 24
" miscellaneous	42,950 62	6,061 75
" property accou'ts	22,739 40	21,619 83
" P., S. & P. R. R. surplus	30,000 00	.....
	$1,447,046 68	$1,452,212 10
Expenditures, viz:		
Maintenance of way	$201,402 30	$171,258 00
Locomotive power	146,889 21	143,558 51
Fuel	118,282 71	113,826 54
Train expenses	242,871 44	251,015 27
Station expenses	119,959 89	117,029 79
Mail expenses	1,121 39	467 40
Office establishment	41,356 98	42,862 02
Insurance and taxes	26,317 29	25,271 00
U. S. tax	24,215 05	24,769 71
	$922,416 26	$890,058 24
Balance	$524,630 42	$562,153 86
Rent of B. & M. R. R.	$3,215 04	$3,215 04
Int. paid and accrued	124,563 70	133,608 90
Total rent and interest	$127,778 74	$136,823 94
Net income	$396,851 68	$425,329 82

In the foregoing statement of receipts for 1867 is included $30,000 from the Portland, Saco and Portsmouth surplus, and $27,875 07 from miscellaneous sources, which do not appear in that for 1868. The actual receipts from the business of the railroad, excluding the miscellaneous and property accounts, it will be seen, have been $1,424,530 52, against $1,351,356 66 for the preceding year; or an increase of $73,173 86; while the working expenses have been $32,358 02 less; making, together, $105,531 88; from which is to be deducted the profits of the Rockport Branch, included in this year's statement, but not in the preceding, estimated at $6,785 47, leaving $98,746 21 as the actual net increase from the working of the road.

During the year we have built in our own shops two new engines. We have entirely rebuilt two others, making them equal to new machines. We have made extensive repairs upon twenty-five others, putting on seven sets of steel tyres, and have also made such repairs as have been necessary upon the remainder. Our motive power consists now of forty-three engines.

In our car shops, during the same period, we have built two new first-class passenger cars, one baggage car, eighteen platform cars, twenty-five coal, six hand and three rail cars, and rebuilt four passenger, twenty-eight box and two platform cars; and have repaired and painted a great number of others, both passenger and freight cars. We have also purchased one new passenger car, and one half of three new postal cars. Our present number of passenger cars is seventy-three.

During the year we have laid down 2,700 tons of new rails, 300 tons of which are steel; and also upwards of 500 tons of welded rails, and 52,710 sleepers.

In the year 1867 we laid down 2,800 tons of new iron; so that within the last two years we have laid down 5,500 tons of new rails, or enough for a new single track railroad the entire distance from Boston to Portsmouth. The total cost of this 5,500 tons of new rails has been not less than $487,000; or, deducting the value of old rails taken out, $222,000. We said, in our report last year, and new repeat, that "this increased necessity for new iron has been caused partly indeed by the increased weight and number of trains, but also, we regret to say, in great measure by the bad quality of much of the iron recently manufactured." Our previous average yearly requirements were only about 1,000 tons which, after deducting old rails, would have cost about $40,000.

We have always purchased what we supposed to be the best rails the manufacturers could make, and at the prices fixed by them. For the last eighteen months, besides the steel rails, before referred to, we have been having rails made to specifications, and under inspection, paying an extra price, hoping thereby to secure a better quality of iron.

We have had twenty five tons of iron rails with steel heads in use, as an experiment, in our main track, for upwards of two years, and so far with the most satisfactory results.

We have constructed, during the year, 15,023 feet of side track. The total length of side tracks on our road and branches is now 26 miles.

We have, in previous reports, enumerated our principal extraordinary expenditures (a part of which belong to construction),

Amounting, in 1866, to	$490,847 96
And in 1867, to	552,180 72
In 1868 they were	603,590 17
Total	$1,646,718 85

Taxes paid during the three years, to wit:

1866	$119,238 18
1867	115,099 28
1868	117,236 50
	$351,573 96

Our taxes amount to about one quarter of our net earnings.

Add three years loss in operating South Reading Road	$31,083 76
Forced loan to do	10,656 94
	$41,740 70

These with the other expenditures referred to, will seem to the stockholders very large; but they have not been made in any case until we were clearly satisfied of the necessity of them for the accommodation of our increasing business, and the economical working of the road. These liberal outlays, however, within the last few years, will, we hope, diminish the necessity for so large similar expenditures for some years to come, the new works recently in progress being substantially completed; and especially ought the necessity for new iron to be greatly diminished.

Our new bridge, across the Merrimac at Newburyport, was opened for the passage of trains on the 19th of March, and has given unqualified satisfaction. By the concurrent testimony of those competent to judge, it is one of the most perfect structures of its kind in New England, and reflects great credit upon the Engineer under whose charge it has been built, T. Willis Pratt, Esq. Its cost has been great, but the outlay is fully justified by the increased security of travel, and the gratification of the numerous patrons of our road.

The total cost of the bridge proper has been	$252,089 01
New road connected with it	86,850 15
New draw in old bridge	7,027 15
	$345,966 31
Second track, from Salem to Beverly	$122,070 53
Rockport Railroad, purchased	91,007 28
Lands for extension into Lawrence	30,000 00

Under the authority given by the stockholders at their last annual meeting, we have issued $500,000 of six per cent. bonds, free of United States income tax, having twenty years to run, from March 1st last, selling them at 96 per cent., or at a discount of 4 per cent. This 4 per cent. discount, distributed through the twenty years is equivalent to an addition of one-fifth of one per cent. per annum to the interest; so that we pay in fact 6⅕ per cent. per annum on the loan; being fully 3 per cent. less than we have been paying in dividends and taxes on our stock. As large amounts of our indebtedness will have to be provided for within the next year or two, and in view of the unsettled aspect of financial affairs of the country it seems expedient that the stockholders should confer upon the directors the further power, to be used or not, as they may find necessary, of issuing bonds to the extent of $1,000,000.

A connecting track between our Railroad and the Fitchburg Railroad, near Prison Point, has been put in under authority of an Act of the Legislature of 1867, at the joint expense of the two corporations, and is now in constant use, and proves of great convenience and utility in the interchange of freight.

We have not received from the Portland, Saco and Portsmouth Railroad Company any part of their surplus earnings the past year, their available resources having been applied towards payment for new shops, machinery and other improvements. By their account, rendered to December 1, 1868, there is a balance due to us from accumulated surplus of $168,388 63, which sum is to be reckoned among our assets.

The number of miles run by locomotives has been 900,280. Number of passengers carried, 8,106,787. Tons of freight, 281,809.

TRIAL BALANCE, NOV. 30, 1868.

Cost of railroad	$5,865,639 90
" equipment	739,592 67
" property	797,942 49
New work unfinished	127,697 86
Balances due	269,140 62
	$7,300,013 04
Share capital	$3,883,300 00
Bond capital	2,192,400 00
Balances due	147,096 62
Temporary loan	856,200 00
Profit and loss	221,016 42
	$7,300,013 04

Transcontinental Railroad Convention.

OSWEGO, N. Y, Oct. 6, 1869.

The great Railroad Convention, that was called to assemble in this city at 10 o'clock this morning, was called to order by Mayor Page, at 7 o'clock this evening, when prayer was offered by Rev. Dr. Condit. Mayor Page then welcomed the members of the Convention as follows:

In behalf of the citizens of Oswego I extend to you and each of you a cordial welcome to our city. Oswego feels a deep interest in this Convention, and hopes its fruits will redound to the honor of its participants. The discussion of the themes brought before the Convention must result in great good. Living in an age of commerce, the great missionary of the world, whatever conduces to facilitate and extend it, either domestic or foreign, contributes to the good of mankind. As complete as we may consider our railway system, it is but in its incipient stages. The transcontinental system is the one we are most immediately interested in, and but very little is now needed to make it complete. And who can contemplate the immensity of the commerce that will flow through its channels! Mayor Page concluded by nominating Gerrit Smith as temporary chairman, which was agreed to.

Mr. Smith, on taking the chair, addressed the Convention at some length in favor of the projected extension of the Pacific Railroad connections to Portland, Me. He spoke of commercial enterprises, ancient and modern, and then referred in general terms to the great benefit to be derived from the enterprise which was to be brought before this Convention.

Mr. Eugene Prindle, of Jackson, Mich., was called upon and responded. He said he was here more as a looker on than as a speaker. He was representing an interest which was centred in a road from St. Clair to Chicago, of which sixty miles were already built; but that was not a road from San Francisco to Portland. He was therefore here to see what was going to be done at this Convention. All our railroads had their inception and secured the means for their construction from home local interest. He referred to the vast amount of money lost by issuing bonds to raise money and disposing of them at a sacrifice. It was stated that our railroads has cost $2,000,000,000. He did not believe they cost so much, but he was willing to admit they had cost altogether too much through the bond system. He believed a railroad could be built from Chicago to Portland for twenty million or thirty million dollars, whereas, under the bond system, it would cost sixty million or seventy million dollars. His plan would be to make the railroads along the line of the road stockholders in it. This would secure an interest from those who were to patronize the road. He spoke severely of the dishonesty of officials under the bond issuing system. As to the enterprise, he strongly advocated its being made a road from Chicago to Portland, and not from point to point. He was opposed to the enterprise being placed at the mercy of the local boards. He would have a board of proper men selected to take supervisory charge of the whole line.

John T. Griggs, of Saginaw, Mich., said the Common Council of his city had sent him there to say they were deeply interested in this matter and were anxious to be connected with it. He then proceeded to describe the location of Saginaw and the advantages to be derived from running the proposed connection through that place. But the connection would be with the Northern Pacific road at Superior, thence across to the Straits of Mackinaw down to Saginaw, thence down to Port Huron, and then on, as proposed to Portland. In the Lake Superior country there was a population of 65,000, and its mineral resources were well known. He had no doubt all the necessary aid could be produced.

On motion of Mr. J. C. Churchill a Committee on credentials was appointed.

On motion of Mr. Culvert Comstock a committee on permanent organization was appointed. These committees are to report to-morrow forenoon.

The Convention then adjourned till ten o'clock to-morrow morning.

OSWEGO, Oct. 7, 1869.

The Convention met at half-past ten o'clock, with prayer by the Rev. Mr. Boute.

Mr. Calvert Comstock from the Committee on Permanent Organization, reported for President J. F. Driggs, of Saginaw, Mich. A number of vice-presidents and secretaries were also reported. The report of the committee was adopted, and notwithstanding Mr. Driggs requested to be excused, he was conducted to the chair. On taking the chair Mr. Driggs briefly addressed the Convention.

The following are the vice-presidents:—John A. Poor, of Portland, Me.; O. F. Fowler, of Bristol, N. H.; John B. Purge, of Rutland, Vt.; Edwin F. Johnson, of Middletown, Ct.; R. T. Hough, of Lewis County, N. Y.; William A. Thomson, of Queenstown, Canada; A. S. Paget, of Oswego; Colonel William Phelps, of Detroit, Mich. and Murray Nelson, of Chicago.

The following are the secretaries:—Henry L. Davis, of Oswego; Eugene Pringle, of Jackson, Mich.; Henry P. Dean, of Portland, Me.; Charles Shelden, of Rutland, Vt.

On motion of Mr. Ames a committee of seven was appointed to arrange business for the Convention to act upon.

A very long communication on the general subject of opening communications, received from Joseph L. Wilson, Commissioner of the Land Office, was read. Speaking of the Central and Union Pacific road he said that was a compromise line, sacrificing general to the local interests, while the proposed Northern Pacific line was a more direct one, easier of construction and 500 miles shorter. He also pointed out other advantages in favor of the Northern Pacific, and regarded that as the line for a great transcontinental railway.

A communication on the subject of the Mississippi valleys, by J. S. Scott, was read, in which were depicted the great natural advantages of those localities. Referring to the proposed route he advocated that the line take in Toledo. He believed that it would prove more advantageous than to run it by way of Detroit.

Mr. Littlejohn, from the Business Committee, reported in favor of a committee of thirteen on resolutions, that the convention adjourn until two o'clock, and that the following resolution be referred to the Committee on Resolutions:

Resolved, That a direct railroad communication on the shortest line across the continent, with the Eastern terminus at Portland, on the Atlantic, and a Western terminus at the mouth of the Columbia or at Puget Sound, on the Pacific, is demanded as a great commercial highway, not alone by the entire intermediate territory directly involved, but by both the continents of Asia and Europe. The report was adopted and the Convention took a recess until two o'clock P. M.

AFTERNOON SESSION.

The Convention reassembled at a quarter past two o'clock, and prayer was made by Rev. Mr. Boute.

The Chair announced the Committee on Resotions as follows:—John A. Poor, of Portland, Me.; H. G. Libby, of Portland, Me.; Charles Sheldon, of Rutland, Vt.; O. F. Fowler, of Bristol N. H.; H. J. Banks, of Ossippee, N. H.; E. S. Ridlow, of Parsonsfield, Me.; Edwin F. Johnson, of Middletown, Conn.; Marcellus Massey, of New York; Robert F. Sage, of Oswego; George J. Past, of Fairhaven, N. Y.; William A. Thompson, of Queenstown, Canada; J. B. Eaton, of St. Clair, Mich.; Gilbert Hathaway, of New Baltimore, Mich.; Gerritt Smith, of Peterboro.

Mr. Poor, of the Portland delegation, stated that there was great interest in Maine to make Portland the twin sister of Oswego in this great route. Some forty men signified their intention of attending this Convention, but the storm, the most fearful on record, had scattered them. He briefly detailed their experiences, and said nothing else would have prevented a prompt and full attendance of the delegation; for their hearts were fully in the enterprise. The committee will be allowed time to-morrow morning to make their report.

Edwin F. Johnson, Engineer-in-Chief of the Northern Pacific Railroad, read an essay on our railway system. In describing the three routes to the Pacific he showed that the Northern one was the most advantageous as regards altitude, climate and settlement. It was not as cold as the central was; less liable to obstructions by snows, and was some five hundred miles nearer to China, Japan and the Russian possessions. He spoke very favorably of the Southern route, and said that it would give to San Francisco what it has not yet got, and will not get without it, and that was a reliable connection with the southern valley of the Mississippi. Speaking of all these routes, he said their construction will save to the government at least $5,000,000 annually in transportation expenses. Referring to the abundant production of gold in Montana, he made the point that the construction of those roads would have the certain effect of hastening the resumption of specie payments, as the roads would afford the transportation facilities the miners now greatly need. He concluded with urging Congress to aid the two proposed Pacific railroads.

Mr. Marcellus Massey, Vice President of the Rome, Watertown and Ogdensburg Railroad, read an essay upon the advantages of and demand for railways, and transcontinental railways in particular.

Mr. Sage, President of the Board of Trade of Oswego, read an essay written by Alvin Bronson, who had been sixty years engaged in the trade of the lakes, on the subject of the lakes. Mr. Bronson, who is over eighty years of age, was present and stated that though his paper was mostly devoted to the subject of lake commerce yet he had referred to the great basins and valleys of the West, which were drained by the lakes and the products of which seek the cheapest and most expeditious transit to market. The essay, after referring to the routes to the Pacific and speaking in approval of the Northern one, calls attention to the value of internal improvements, which pay for themselves over and over again, and contrasts the wisdom of investments in them with those devoted to expensive buildings, &c.

A paper written by Mr. R. D. Hough, of Lewis county, was read on the subject of the route between Whitehall and Oswego, the typography of which he minutely described.

Letters were read from General W. T. Sherman, who urged a concentration of effort to complete to perfection the Central Pacific with a double track, with branches spreading out on both sides; from Governor Baldwin, of Michigan, speaking in approval of the object of the Convention; from F. E. Spinner, United States Treasurer, advocating the most northern route to the Pacific; from Comptroller Allen, Edward Crane, of Boston; Senator Sumner, J. G. Blaine, of Maine; the Governors of Ohio, Wisconsin and Iowa, and J. W. Foster of Chicago.

John Neal, of Portland made a brief address to show the value of time, which was regarded as money, and called attention to steam ocean navigation and the shortening of land communication, in time and space, by the construction of railways. Men now with $5,000 capital were able to do the business of those a few years ago who were obliged to have double that amount. As to the proposed route, there was not the least objection to it. It was entirely practicable and ought to be built, and would be built.

The Convention then adjourned till to-morrow morning at ten o'clock.

OSWEGO, Oct. 8, 1869.

The Convention reassembled at half past ten o'clock this morning. After prayer by the Rev. Mr. Greeley, Mr. Poor, from the Committee on Resolutions, submitted the following report:

Whereas, it is the duty of every General Government to promote by every proper means the safety and welfare of those under its protection, therefore,

Resolved, That in the opinion of this Convention greater railway facilities between the Mississippi and the Pacific States than are now available are demanded by the increase in population of the country and the necessity of commerce.

Resolved, That it is the duty of the Government as well as its truest policy to give such reasonable and necessary aid as will promote the building, at the earliest day, of two additional lines of railway to connect the States abovenamed by the Northern Pacific Railroad and a Southern Pacific Railroad.

Resolved, That greater railroad facilities than now exist are needed for the accommodation of the growing traffic and travel between the Atlantic seaboard and the Mississippi and the upper lake region, demanding the immediate construction of the projected lines, which are designed to form a connection with the lines now in operation —a continuous line which shall reach from the Upper Mississippi to the northeastern extremity of the Union.

Resolved, That the line projected above, when extended, as it ultimately will be, in connection with the Northern Pacific Railroad, along the Pacific coast, northerly into Alaska, and on the east to the Gulf of St. Lawrence, would constitute by its great reduction of the extent of ocean transit the most convenient means of communication between the densely peopled portion of Europe and Eastern Asia, and that our new nation would derive from such a line of communication great commercial advantages, which would contribute largely to the prosperity of our people, while at the same time it would constitute a powerful and most efficient means toward the general civilization of the globe.

Resolved, That in pursuance of the call of this Convention, and the particular object to be promoted by it, we view with especial interest and favor the efforts now making to secure a continuous and independent line of railway from Chicago to the seaboard by the route of the Lake Ontario Shore Railroad, and thence eastward by the best and most feasible route into New England, and to the harbor of Portland and the Ossipee Valley, affording at the same time the increased facilities required for Western trade seeking access to New York, Boston and the other eastern Atlantic ports.

Resolved, That the Secretary of this Convention furnish to the chairmen of the Congressional Committees on the Pacific Railroad, on Finance and on Ways and Means, when Congress again assembles; to the President of the United States and the members of his Cabinet, certified copies of these resolutions, and also printed copies of the proceedings of this Convention.

Resolved, That we recommend the appointment of a committee which shall be charged with the duty of taking the required measures to organize a railroad company from the most feasible point or points in the eastern part of the State of New York, between Albany and Whitehall, to run in a westerly direction on the most feasible line in the general direction of the southeast basin of Lake Ontario, to be called the New England and New York Railway Company.

The report being accepted, Mr. Poor proceeded at length to support the adoption of the resolutions. He referred to the advantages of shorter and more direct lines, as regards time and cost in transportation, the increasing population of the country and the demand for additional facilities. He then considered the material question as to routes, and showed by statistics and facts that the route from Portland was the one now immediately demanded for short, speedy and cheap transportation from the Pacific to the Atlantic, and from San Francisco to Europe.

D. G. Worcester, of Rochester, followed with a similar argument, closing with the declaration that Rochester must subscribe as much as Oswego to this enterprise and secure the running of the road to that city.

Mr. Nelson, of Chicago, in comparing the transportation facilities of railroads with those of the canals, said that he was now called upon to look after six boat loads of corn detained near Syracuse by breaks in the canal; while the corn shipped at the same time from Chicago had reached New York, been sold and the proceeds received.

Mr. Thompson, of Queenstown, Canada, approved the resolution reported by the committee, yet thought something further was needed, and offered the following additional resolution:

Whereas under the most favorable circumstances the construction of a railway is a most onerous undertaking and requires aid from every quarter and also co-operative talent to be rapidly successful, therefore it is expedient that so soon as the various companies forming a continuous line from Portland to Chicago are properly organized, with a view to construction, that the representatives of the various lines are authorized by this Convention to call a meeting of the officials of said lines and appoint therefrom a standing committee, whose duty it shall be to bring about a unity of sentiment and interests between the different projected lines intended to form the whole through line; said committee to arrange a general traffic arrangement between all the companies and to discover how far a general financial system could be adopted to make the general credits for bonds and shares acceptable to the capitalists of America and Europe on the credit of the individual companies composing the through line; and while certain lines may thus enter into a permanent alliance between Portland and Chicago, nevertheless it shall not prevent the lines west of the Niagara River from forming a New York city connection through the State of New York, with the understanding that said Western lines entering into the Portland combination shall concede just the same traffic and advantages to the New York line as may be agreed upon in the Portland and Chicago alliance, no more and no less.

Mr. Thompson sustained his resolution with an argument going to show that the least had to do with the existing road in constructing a new one the better. All the old companies stand antagonistic to the new ones, and will prevent their organization if possible. In this great enterprise, therefore, he believed the true policy would be to form no alliance with any old company, but to strike out a new and independent line. He referred to the claim made by the old companies of a vested right. What, he asked, was this vested right? If a road had been mislocated, had been been built where it was of no use, must the people be deprived of having a road on a more convenient line? He warned the Convention against seeking affiliations with existing companies. If they did they would certainly be cheated. He regarded it perfectly feasible to carry on this enterprise alone; that it could be done cheaper, and when done would be found vastly more profitable. Mr. Thompson at great length enforced his idea.

The Convention then took a recess till seven o'clock P. M.

AFTERNOON SESSION.

The Convention reassembled at seven P. M., with prayer by Rev. Mr. Greeley.

Mr. Thompson said, on consultation with other members, he had determined to modify his resolution by striking out all after and including the words "Said committee to arrange a general traffic," &c.

Mr. Poor said that he took pleasure in saying with this modification Mr. Thompson's proposition met with the hearty concurrence of every member of the committee. (Applause.)

Mr. Littlejohn suggested that the name be "New England and Oswego Railroad," instead of "New England and New York Railroad." Agreed to, and the resolution was so amended.

Mr. Littlejohn was then loudly called for to speak on the main question and responded. He spoke of the necessity of multiplying railroads leading from the Atlantic to the Western States. He spoke strongly in favor of the proposed route to Portland, setting forth the advantages to the East and West. In the course of his remarks he said he had in his possession a communication from Baring Brothers stating that at a certain price Europe would take 500,000,000 bushels of grain annually from America. Then what must we do? Simply increase and cheapen our lines of communication with the great prairies of the West. He referred to rival routes, the Mississippi and New Orleans, and Norfolk and Richmond, and urged activity, zeal and persistence in the effort to secure three routes from Oswego—one to Portland, Me., one to Boston and one to New York.

The Chairman (Mr. Driggs) submitted the following:

Resolved, That in forming railroad connections between the Atlantic and the Northern Pacific Railroad, at the head of Lake Superior, the shortest, most direct and practical route should be adopted.

Resolved, That while in the opinion of this Convention such connections ought to and will be made by the way of Chicago, the continuation of the Northern Pacific Railroad to the Straits of Mackinaw, so as to connect with the contemplated road from Portland to the Detroit or St. Clair River, ought also to be secured.

Mr. John Neal, of Portland, spoke in favor of the project.

Mr. Esterly, of Wisconsin, pointed out various proposed roads in Wisconsin and claimed that the West was a manufacturing country as well as the East, and said it was the wish of the West that the Mississippi should be continued as a route so that better prices could be secured for its products.

Mr. Littlejohn responded, saying he advocated keeping the manufactories at the East so that they could consume the products of the West; and as to the Mississippi, what the gentlemen had said should act as an incentive to greater exertion on the part of the railroad men.

The Chair (Mr. Driggs, of Saginaw,) detailed the resources of the Lake Superior region, the troubles and difficulties of travel at some points, and then showed the necessity for doing what he proposes in his resolutions above. He closed by saying that from what he had witnessed of the spirit at this Convention he was satisfied that the needed railroads would be built.

Mr. Pringle, from Michigan City, was the next speaker. After speaking of the importance of railroad communications he urged the importance of the proposition of Mr. Thompson with great earnestness, as also the resolutions reported by the committee.

Mr. Poor followed, sustaining the object of the Convention, and closed with moving the adoption of the resolutions. Carried unanimously.

The question was then on Mr. Thompson's resolution. The word "authorized" was changed to "requested," and then the resolution was adopted unanimously.

Mr. Driggs' resolutions were then adopted unanimously.

Messrs. G. Mollison, of Oswego; G. Ames, of Oswego; George J. Post, of Fairhaven; R. T. Hough, of Lewis County, and Charles H. Cross, of Pulaski, were appointed the committee on the road from Oswego to Whitehall.

The Convention then, after adopting the usual vote of thanks, adjourned *sine die*.

☞ The directors of the Port Chester and Ridgefield Railroad have agreed upon the line of their road, which is to be 23 miles long. By extending it nine miles beyond Ridgefield, it can be made to connect with the Boston, Hartford and Erie road near Danbury.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterisk* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, October 16, 1869.

Stock Exchange and Money Market.

Money has been in much more liberal supply, especially in a temporary form, and rates have been further reduced, the closing quotations having been 4@7, chiefly 5@6 per cent. on call, and from 8 @12 per cent. per annum on strictly prime to good business paper. There has been a considerable influx of currency reported from several sources, and the balances in private hands, seeking prompt, secure and profitable employment, in a controllable form, have been largely augmented. Lenders have been free of accommodation to the prominent street houses, and more willing to make advances to mercantile borrowers; while they have shown much reluctance to extend the usual aid to the more purely speculative interests. The city banks, while reporting a loss of over 3⅞ millions of deposits, and 2⅛ millions of legal tender notes, show a gain of 9⅜ millions of specie. They have reduced their loan and discount averages, about 4½ millions; and have added slightly to their circulation. They now hold 20⅛ millions more of gold and legal tender notes than the 25 per cent. of their liabilities for deposits and circulation, called for by the National Banking Act. The U. S. Sub-Treasury now holds a coin balance of 85½ millions, and a currency balance of over 5½ millions.

The specie reserve of the city banks according to the latest return is $21,513,526, against $9,346,097 same time last year. The city bank deposits are now $179,214,675, against $189,033,997 week ending Oct. 10, 1868. The legal tender reserve amounts to $52,017,588, against $60,005,086 same time last year. The circulation now stands at $34,178,925, against $24,188,103 same time last year. The loans are now $250,749,974, against $265,595,582 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged about $104,730,142 a day, against a daily average of $132,148,962 the preceding week, and $164,879,069 the week ending with Sept. 25, 1869. The current week's exchanges average about $93,194,000 a day. The city banks, last week, reported an increase of $5,610,677 of specie, with a los $3,909,883 of deposits, and of $2,191,500 of legal tender notes. They reduced their loans, $4,489,675; and increased their circulation, $9,516.

The city bank exchanges on Wednesday were $86,088,438.

National Bank notes to the amount of $107,230 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $318,323,191, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $18,687,306, leaving, with the existing 1,620 banks, (having an aggregate capital of $422,659,260.) an actual circulation at this date, of $299,635,785. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,500,000; and for the public deposits, $19,518,000—making a total of $362,018,000. The Treasury Department last week redeemed and destroyed $180,800 of worn and mutilated fractional currency, and issued $878,500 of new. The outstanding amount of fractional currency on the 1st of Oct., was $33,001,298 50, against $30,711,799 87, on the 1st of September, 1869.

The U. S. Sub-Treasury receipts, week ending with Oct. 9, were $6,595,496 in coin, including $2,772,900 from customs duties, and $5,607,732 in currency; payments, $4,777,947 in coin, including $277,774 of coin interest, and $5,660,468 in currency; balance at the close of the week, $91,305,547, including $84 049,424 of coin, and $5,821,548 of currency, against $91,989,034 at the close of the preceding week, showing a decrease of $683,487. The business of the Office on the first business day of the current week, was as follows: On Tuesday, receipts, $1,505,919 in coin, including $802,000 from customs, and $669,300 in currency; and payments $117,967 in coin, including $105,649 of coin interest and $904,960 in currency. The balance at the close of business on Tuesday stood at $91,240,175, (including $5,585,889 of currency, and $85,496,676 of coin,) against $89,729,337 a week previous; and $89,110,833 on Sept. 28, 1869. The aggregate receipts of the office in Sept. were $63,725,058, including $12,504,326 from customs; aggregate payments, $57,424,305, including $4,858,389 of coin interest. On Monday, the Office was closed, as were all the other Government

offices throughout the country, in honor of the memory of President Pierce.

The outstanding amount of coin certificates on the 1st of Oct. was $24,412,720, against $23,647,580 on the 1st of Sept. 1869. The Sub-Treasurer at this port, last week, retired $2,487,924 of coin certificates through the receipts for customs.

Government revenues have been yielding moderately since our last. The excises yielded about 3¼ millions; customs at the port of New York, $2,772,900, and at the outports about $900,000 (in coin) more, making the grand total income for the week equal to about $8,024,770 in currency. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 53 millions.

Gold has been quite sparingly dealt in, most of the week, and the fluctuations in the price have have been less violent, the extremes having been from 129¾@132, and the closing quotation on Wednesday 130⅛. The speculative demand has been on a very limited scale. The customs inquiry has been less urgent. There has been but little call for specie for export, in view of the heavy produce shipments. The specie exports, last week, were only $460,248, against specie imports to the amount of $3,362,987. On Tuesday of the current week, the *Hammonia* took out $247,000 in specie. On that day, the Government marketed through the U. S. Sub-Treasury here a million of gold at from 130.01&130.15. The bids reached an aggregate of $3,953,000, and ranged from 128 98@130.15. On Wednesday, the *Russia* delivered here equal to $35,165 in specie; and the *China* took out equal to $200,000 in specie.

The coin balances of the Government at this port on Wednesday morning, amounted to nearly 85½ millions.

The customs of the port on Wednesday yielded $481,000. The U. S. Sub-Treasury disbursed $18,537 of coin interest, on that day.

The customs demand for Gold last week, averaged $462,150 a day; thus far, this week, it has averaged $401,500 a day, or equal to a weekly aggregate of $2,409,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $3,362,987, and since Jan. 1, $14,565,429, against $6,002,744 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $105,872,038, against $95,613,217 same time in 1868. At San Francisco, from Jan. 1, to Oct. 5, 1869, $6,435,400, against $6,560,730 same time last year.

The exports of specie, from this port, last week, were $460,248, against $43,600 same week last year; total, since Jan. 1, 1869, $27,383,284, against $66,430,157 same time last year. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $227,774, and since Jan. 1, 1869, $69,543,017, against $63,707,487 same time in 1868. The specie exports from San Francisco, from Jan. 1, to Oct. 5, 1869, were $30,825,974, against $30,150,981 same time in 1868.

The U. S. Treasury receipts from customs at all ports from July 1, to Oct. 9, were about 54 millions.

The amount of specie sent east by railroad from San Francisco, thus far, this year, has been $5,056,537.

Foreign Exchange has been very quiet, as a rule, and rates have favored buyers. Bankers' prime sixty day bills on London closed on Wednesday at 108⅞@109¼, and on Paris to 5.22½@5.16¼; sight bills on London to 109⅜@109¾, and on Paris to 5.16¼c.@5.14⅜. The offering of produce bills has been again quite extensive this week. The week's exports of domestic produce have been to the currency value of $5,284,857, making the total since Jan. 1, 1869, $151,976,583, against $128,807,937 same time last year.

Government securities have been moderately dealt in, most of the week, and prices have been somewhat variable, though showing a substantial improvement of about ⅛ of 1 per cent. The offerings of bonds have not been extensive. On Wednesday, Government bought in two millions of 5-20s at from 115.87@116 net, out of an aggregate offering of $7,249,450. Subsequently the market became heavy and weak, yielding ¼@½ per cent.

U. S. sixes of 1881 closed here on Wednesday at 119@119⅜; U. S. Five-twenties of 1862, ex-coupon, 120@120¼; U. S. Five-twenties of 1864 at 119@119⅛; U. S. Five-twenties of 1865 at 119⅜@119⅝; U. S. Five-twenties of 1865, consolidated, 117¾@117⅞; U. S. Five-twenties of 1867, 117⅝@117¾; U. S. Five-twenties of 1868, 117⅝@118; U. S. Ten-forties at 108@108⅛, ex-interest; U. S. Six per cent. currency bonds, 107½@107¾.

The latest quotations at the London Stock Exchange compare as follows with former returns:

Railway and miscellaneous share property has been without notable activity, and values have been, in the main, further depressed, the market showing a remarkable absence of speculative strength or buoyancy.

There has been more inquiry for State bonds, also for prime railway mortgages.

There has been more animation in General Business, but at variable prices. Breadstuffs and Petroleum closed more firmly. Provisions, irregularly. Middling upland cotton closed quite heavily on Wednesday at 26@26¼ cts. per lb. The stock of cotton now here is given at about 13,500 bales. The receipts at the port this week, have averaged about 5,900 bales a day. The receipts at all the ports, thus far in the year commencing with Sept. 1, 1869, have been 205,000 bales, against 145,000 bales in 1868–'9; exports, same time 45,000 bales, against 37,500 bales same time in 1868–'9; stock on hand at latest dates, 103,000 bales, against 85,000 bales same date 1868. The exports of domestic cotton goods from this port, since Jan. 1, have been 17,934 pkgs., against 16,398 pkgs., same time last year. From Boston, 6,404 pkgs., against 7,405 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in fair demand, and firmer at from 8½@16¼c., per lb.; week's receipts, 7,165. Milch cows very dull, at $40@$110 each, receipts, 55. Veal calves in good request at from 5@13c. per lb.; receipts, 1,957. Sheep and lambs in better demand at from 4@7c., and 7¼@9c. per lb.; receipts, 25,777. Swine in less request at 10¼@11c. per lb., all live weight; receipts, 13,760.

The week's dry goods imports were valued at $1,490,685, and of general merchandise, $2,413,316, making an aggregate for the week of $3,904,031 specie value, against $4,057,449 same week last year. A livelier market has been noted for the leading articles, particularly dry goods and groceries, which close more firmly.

The ocean freight market has been moderately active, since our last, but rates have been quoted easier and irregular. For Liverpool we quote flour at 2s. 3d.@2s. 4½d. by sail, and 2s. 9d.@2s. 10½d. by steamer, per bbl.; grain at 8d.@8½d. by sail, and 8¾d.@9d. by steamer, per bushel; cotton at ¼@$\frac{5}{16}$d. by sail, and ⅜@$\frac{7}{16}$d. by steamer, per lb.; and heavy goods 20s.@35s. by sail, and 30s.@50s. by steamer, per ton. Total number of vessels in port on Wednesday, 367.

The New York exports, exclusive of specie, for the week ending Oct. 12, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$2,753,889	$5,284,857
Prev. reported	126,054,048	146,691,726
Since January 1	$128,807,937	$151,976,583

The imports for the week ending October 9, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,591,972	$1,490,685
Gen. merchandise	2,465,477	2,413,346
Total for the week	$4,057,449	$3,904,031
Previously reported	193,627,757	236,412,729
Since January 1	$197,685,206	$240,316,760

The balance in the Sub-Treasury on Wednesday was $92,318,084 93.

Chicago, Danville and Vincennes Railroad.

Messrs. W. Bailey Lang & Co., Merchants, No. 54 Cliff st., this city, have for sale $2,500,000 Seven per cent. First Mortgage Sinking Fund Bonds of this company, having forty years to run, principal and interest payable in New York in gold coin. These bonds are secured by a first mortgage upon 140 miles of road, and its appurtenances now or hereafter to be acquired, extending from Chicago to the Indiana State Line, in the direction of Terre Haute, 55 miles of which, from Chicago to Momence, are now completed and open for business, and every effort will be made to finish the entire road in time for next season's crops. Sufficient stock has been subscribed on the line of the road to prepare it for the iron. The rails are already provided for, and a large amount of equipment is under contract and in progress of delivery. To meet a portion of the expenditures for iron and equipment these bonds are now offered for sale at 95, and accrued interest in currency. The advantages of investing in this security, at the present reduced price, in preference to those of the United States, at 20 per cent. premium, as well as the value of the road as a portion of the shortest through line between Chicago and New Orleans, Mobile and Pensacola, is fully and plainly stated in an advertisement which we publish elsewhere, to which the attention of capitalists, both at home and abroad, is respectfully invited.

☞ The work on the Medford Railroad, which is to run from Medford, in Burlington Co., N.J., to Camden, will be put under contract in a short time. It is the intention of the company to make its Camden terminus at Kaighn's Point. The road from Manchester, which it has been decided upon to build, will also connect with this track at Medford.

☞ The grading of the Fox River Valley Railroad is completed three miles north of Ottawa, men are at work on the line ten miles further, and the contract for grading the road still further north, from Yorkville, Kendall County, to Montgomery in Kane County, two miles south of Aurora, has been let to L. B. Judson, of Oswego, who is to commence immediately.

☞ Extine Norton, Esq., has been elected President of the Paducah and Gulf Railroad; L. S. Trimble, Vice President, and H. L. Jones, Secretary.

☞ Gen. J. W. Sprague, long Managing Director of the Winona and St. Peter Railroad, has resigned. He is succeeded by J. H. Stewart, Superintendent of the road.

☞ O. Chanute, Esq., has been appointed Chief Engineer of the Leavenworth, Lawrence and Galveston Railroad.

☞ The Pana and Springfield Railroad is completed from Springfield to Taylorsville, about 25 miles.

☞ THE CENTRAL PACIFIC RAILROAD is rapidly becoming one of the great successful enterprises of the time. It was built with unparalleled energy, equipped with rapidity, and its operation, from the beginning, has been remarkably profitable. The net earnings, after the payment of operating expenses before its completion, EXCEEDED FOUR MILLIONS IN COIN; while its interest liabilities during the same period were only $1,800,000. Since its connection with the Eastern roads, and the consequent addition of the vast through traffic, the gross earnings have been at the rate of seven millions per annum in gold—EQUAL TO MORE THAN NINE MILLIONS IN CURRENCY—and the business is steadily increasing. The proportion of the net earnings is over $3,000,000 gold, while the annual interest payments are only about $1,000,000. The financial strength of the Company is therefore well assured.

The Six per Cent. Gold FIRST MORTGAGE BONDS OF THE CENTRAL PACIFIC RAILROAD COMPANY, having thirty years to run, are entitled to the fullest confidence, and afford a valuable and attractive investment. We are prepared to fill orders at current market rates.

FISK & HATCH,
Bankers and Dealers in Government Securities,
No. 5 Nassau-st.

☞ PACIFIC RAILWAY GOLD LOAN, $6,500,000. A seven per cent. land grant, railroad, first mortgage bonds, having thirty years to run. Interest and principal payable in gold. Coupons payable semi-annually in London, Frankfort and New York. Circulars, maps and pamphlets sent on application. The bonds for the present are sold in currency at 95, with accrued interest. DABNEY, MORGAN & CO., 53 Exchange Place. M. K. JESUP & COMP'Y, 32 Pine street.

☞ At a recent meeting of the Directors of the South Eastern Counties Junction Railway Company (Canada,) the Hon. Mr. Dunkin was elected President, J. O'Halloran, Esq., Vice President, and E. L. Chandler, Esq., Secretary-Treasurer.

☞ The contract for the construction of the first 20 miles of the Little Rock and Fort Smith Railroad has been sub-let to Messrs. Budd & Decker, who will have over 1,000 hands at work by the 15th of the present month.

☞ The Portland and Rochester Railroad Company have adopted the route through Springvale village, and directed the engineer to proceed and locate the same at once.

☞ The Mansfield and Framingham Railroad, from South Framingham to Sherborn, has been completed. The line will soon be finished and running to Mansfield.

☞ Hon. John Lynch has been elected President of the Portland and Rochester Railroad Company; Thomas Quimby, Superintendent and Treasurer; and Frederick Robie, Clerk.

☞ Mr. Field of Greenfield has been engaged as Chief Engineer of the construction of the Boston, Barre and Gardner Railroad.

☞ Capt. W. W. Wellman has been appointed Chief Engineer of the St. Croix and Bayfield Railroad.

Tide-Water Receipts.

The quantity of flour, wheat, corn and barley left at tide water from the commencement of navigation to the 30th ult., inclusive, during the years 1868 and 1869, was as follows:

	Flour, bbls.	Wheat, bu.	Corn, bu.	Barley, bu.
1868..	185,300	6,621,700	13,256,400	771,400
1869..	349,300	11,614,000	4,596,800	30,900
Inc	164,000	4,992,300	*8,659,600	*740,500

* Decrease.

By reducing the wheat to flour, the quantity of the latter left at tide-water this year, compared with the corresponding period last year, shows an increase equal to 1,162,460 bbls. flour.

The following comparative table shows the quantity of some of the principal articles of produce left at tide-water from the commencement of navigation to and including the 30th of September in the years indicated:

	1867.	1868.	1869.
Canal opened—	May 6.	April 23.	May 6.
Flour, bbls.	125,000	185,300	349,300
Wheat, bushels..	1,720,800	6,621,700	11,614,000
Corn, bushels...	11,304,300	13,256,400	4,596,800
Barley, bushels.	153,300	771,400	30,900
Oats, bushels...	3,586,700	6,581,300	2,220,200
Rye, bushels....	255,900	364,900	231,200
Malt, bushels....	239,200	340,900	175,300
Feed, lbs.....	.....	.....	7,776,800

The figures for 1868 cover 45,200 bbls. flour 2,811,500 bush. wheat, 694,500 bush of corn, 321,700 bush. barley, 104,100 bush. rye, 941,900 bush. bush. oats, 54,300 bush. malt, estimated to have been detained on the canal by ice during the winter of 1867 and 1868.

Cotton Supply in India.

On the 29th of July last, under the auspices of the Cotton Supply Association, a conference was held at the Westminster Palace Hotel, London, "for the consideration of measures having an important relation to the agricultural and commercial interests of India."

The chair was taken by Mr. E. Ashworth, who stated that the conference would have been called at an earlier period of the session but for the promise that the supply of cotton from America would be sufficient this year to meet the requirements of this country. That promise was not likely to be fulfilled, reliable information having been received that not more than 3,000,000 bales would be produced for home consumption as well as for export, whereas in 1860 the number of bales imported into this country was 4,500,000. Lancashire was in a strait. Her mills were now working only five days out of the six, because of the short supplies of the raw material. There was a constant struggle amongst mill owners for the possession of the cotton sent to the market. They preferred to pay an enhanced price for it rather than stop their mills and throw thousands of operatives out of employment. America failing, it was necessary for Lancashire to look elsewhere for a supply. It was no use going to Brazil, whence tolerably large quantities had hitherto been obtained, for that country was plunged in civil warfare. And disappointment would only be experienced by going to Egypt or Turkey. India was the only quarter whence supplies adequate to the requirements could be expected. But the difficulties of communication were so great, that unless something was done the produce would diminish rather than increase, for whereas the maximum growth had been 1,800,000 bales, only 1,500,000 bales were produced last year.

After an interesting discussion several resolutions were unanimously agreed to, of which the following was the most important:

"That this meeting, viewing with satisfaction the statement made by the Duke of Argyll in the House of Lords, of the intention of the Government of India to undertake the extension of the railway system, as well as other public works of a remunerative character in the country, is of opinion that the outlay proposed is too small to obtain as early a completion of the works of the greatest urgency as is desirable, and that £10,000,000 a year at least will be needed adequately to meet the requirements necessary for the agricultural development of the country, and further recommends that those short lines of railway should have precedence which would facilitate the export of cotton and other fibres so much required by the manufacturers of this country."

Journal of Railroad Law.

RAILROAD COMPANIES—RIGHT OF SUBSCRIPTIONS TO CAPITAL STOCK.

The facts of the late case of The Leavenworth and Des Moines Railroad Company *vs.* The County Court of Platte County (42 Mo. 171) are fully and clearly stated in the following opinion by

HOLMES, J.—This is an application for a mandamus upon the County Court of Platte County, to require the court to issue the bonds of the county in pursuance of analleged subscription to the stock of the Leavenworth and Des Moines Railroad Company under "An act to incorporate the Platte City and Des Moines Railroad Company" approved January 4, 1860, and certain other amendatory acts. (Adj. Sess. Acts 1859-'60, p. 443, § 6 id. p. 88 § § 1, 2; R. C. 1855, p. 427 § § 30–38.)

The case depends upon the construction which is to be given to the first named act, by which the company was chartered. The sixth section gives the County Court a general power to subscribe stock. By the eighth section this power is expressly limited, and made subject to the provisions of the general railroad law (R. C. 1855, p. 427, § 30.), which provides that the County Court "may, for information, cause an election to be held to ascertain the sense of the tax-payers" as to such subscription. No such election was directed. This was a necessary condition of the power to subscribe. That all the sections of the act are to be construed together is a well settled rule of construction. The word "may" in this clause, must be interpreted to mean "shall." It is a power given to public officers, and concerns the public interest and the rights of third persons who have a claim *de jure*, that the power shall be exercised in this manner for the sake of justice and the public good (Newburg Turnpike Co. *vs.* Miller 5 Johns Ch. 113). This construction is confirmed by the act passed at the same session amendatory to this thirteenth section, and making the act read "shall" instead of "may." This amendment may be taken as declaratory of the true meaning of the former act. It follows that the subscription as made, was without the authority of law and void. If the subscription had been lawfully made it might have become the imperative duty of the County Court to issue these bonds, and the performance of that duty might have been enforced by the writ of mandamus. In the positive requirement that the sense of the tax-payers should first be taken it is necessarily to be implied that the power was not to be exercised without their consent and authority. In this view of the matter it is apparent that the case of the Missouri and Mississippi Railroad Company *vs.* The County Court of Macon County, decided by this Court at the October term 1867, and other cases relied upon by the petitioner, relating to the question of a repeal of a special act by a subsequent general law, have no application to this case.

This conclusion being decisive of this application, it becomes unnecessary to consider further the other points which have been presented in the argument.

Peremptory mandamus refused.

The other Judges concur.

Steering by Steam.

A NEW APPLICATION OF MACHINERY.

A correspondent who was present at the occasion of a recent trial of the steam steering apparatus with which the small steamer *North Star*, of Muskegon, has been supplied, writes as follows:

The experiment was such a complete and marked success mechanically, and seems in its principle to foreshadow such immense benefits to steam navigation, that it deserves the earnest and instant attention of the public. While the arrangement of the machinery connected therewith is simplicity itself, the result on the motions of a vessel are instantaneous, and as powerful as can be desired. Instead of a cumbrous wheel in the pilot house, a lever like the starter of a locomotive stood up from the floor, which worked either way from side to side by no heavier pressure than could be given by the thumb and finger, but which made the North Star, a long, narrow river boat, almost turn on her centre, and then as instantly reverse with the same promptitude of action on a different application. A doubt having been expressed as to whether, by the same machinery, she could be 'held' on the same steady course for a length of time, the steersman fixed on a mill chimney two miles distant, and made for it. After getting her from the previous violent swayings into true line, he dropped the bar and let her run for it, until all on board were satisfied of the truth of her course. Where the steam rudder is left there it stays, and no power less than that able to overcome all the steam force of the boilers can shift it till again manipulated by the lever.

Numerous experiments were made in turning, backing, twisting, and all with astonishing results. The steering power was instantaneous in its action. When standing still the rudder could be put down with such force as to swing the vessel a point or two. I really believe that, had such an apparatus been on the Milwaukee and Lac La Belle, when they met on the St. Clair flats, even at the late moment when the dire warning note was sounded, collision could have been easily avoided. The whole steam power of the vessel thrown instantaneously (as is possible) upon the taut wire rope rudder lines, it would have swung them so as to merely rub sides, if they touched at all. I have watched with admiration, on the rapids of the St. Lawrence, the old Indian pilot with his half dozen brawny assistants, grouped around the mammoth wheel, as with lightning speed he shot the long sault or plunged the cascades. I have watched his quick, nervous action, and word of command so quickly sounded by his assistants, and wondered what our fate would be should these men mistake, even for an instant, larboard for starboard. But with a machine like this the doughty old redskin could stand in all his native dignity alone, and with one hand, unaided, as lightly as a feather, make the steam power, as prompt as telegraph, work his wayward and oft-changing will, and swing his steamer as quick as changing a top.

Another beautiful contrivance connected with this, and one as much to be appreciated by the traveling public as the steam rudder by the regu-

lar marine, is what the patentees technically term the "life lines." If you will call back to memory almost any marine disaster from burning, either at sea or on our inland waters, you will readily recollect that generally the most painful and terrible portion of the calamity began when the ship lost steerage way and going adrift—going any and every way before the wind. From the Henry Clay on the Hudson, to the Sea Bird on Lake Michigan, it has almost ever been the same story; a pilot-house deserted; a vessel unmanageable; refuge within almost easy reach, but impossible of attainment by lack of steering power. This apparatus provides continuous communication from stem to stern, by which the vessel can be managed from any part of the deck. When the pilot-house gets "too hot to hold him," the wheelsman can take hold at the next cool spot. If the stern is in flames he can steer from the bow, and *vice versa*. As long as there is a bit of deck left the iron life-line is there, and until it melts the communication is as complete.—*St. Louis Dispatch.*

A European Railway to India.

ALL EUROPE AT ONE END OF THE LINE, AND ALL ASIA AT THE OTHER.

Some fifteen years ago an Anglo Saxon prophecy was published for the edification of the world. The prophet was an eminent English engineer, and the subject of his prediction was the route between England and the East. The future was presented to us pictorially, or, at least, in a series of half a dozen maps, dated successively 1830, 1840, 1850, 1855, 1860, 1865, and comprising the territories between the British Isles and Hindostan. The first two of these maps illustrated the past, the next the present, the last three the future. If the reader will open a chart of the world on Mercator's projection he will see that a line may be drawn in a straight direction from Ostend to Bombay across one tract of land after another. He will see, also, on a little further examination, that there are three water ways between these two points—one representing the long circuit of the African Continent; a second passing by the Mediterranean and the Red Sea, and a third, involving rather more land traveling, by the Mediterranean and the Persian Gulf. Now, in the routes taken of late days by the commerce between England and the East the successive improvements have consisted in the substitution of land for water—in other words, of railways for ships. For example, in 1830, the outward bound Indiaman simply left a channel port, sailed all round the Cape, and then up the Indian Ocean to Bombay or Calcutta, as the case might be. The time consumed in the voyage was about 100 days. In 1840 came those improvements which gave the new passage the distinctive name of the "overland" route, though the land journey as yet bore but a small proportion to the sea voyage. The steamer again left a channel port, but turned eastward through the Straits of Gibraltar to Alexandria, from which place a land journey across the Desert to Suez brought the passenger to the shores of the Red Sea, where the sea voyage was again resumed. The time was reduced to fifty-six days. Meanwhile the European Continent had been so far traversed by railways that first Marseilles and then Trieste might be reached, and thus a broad angle was saved, since the traveler proceeded in nearly a direct line from Ostend to Alexandria, and thence onwards as before. This brought the time to thirty-nine days, as it stood when the prophecy was uttered. The future was then prefigured by three maps to represent the periods of 1855, 1860 and 1865. In 1855 a railway along the Euphrates Valley was to open a communication by land with the head of the Persian Gulf, thus saving the circuit of the Arabian Peninsula, besides which a railway across India was to connect Calcutta with Bombay. By this the time was to be reduced to nineteen days. In 1860 our prophet carried the European line straight across the Continent to Constantinople, and then again round the seaboard of Asia Minor to join the Euphrates Valley line. This would dispense with all the sea passage, except between Bussora and Bombay, and bring the time down to twelve days. In 1865 the Persian Gulf route was to be itself superseded by a railway along the southern shores of Persia and Beloochistan to Hyderabad, in Scinde, where the Indian lines, then to be complete, would meet it. Thus the whole journey became a railway journey from beginning to end, and would be easily performed in ten days, or, without stoppages, in a week.

We have now only to look at Professor Chenery's pamphlet to see how these sanguine, though natural, prophecies have remained without fulfilment. Not only has 1865 passed away, but 1870 is close upon us, and yet we have not reached the stage marked out for 1855. There is no Euphrates Valley Railway, no railway in Asia Minor, no railway in Beloochistan, no railway even from Constantinople to Belgrade. Except for the Indian lines, we stand substantially where we stood in 1850; and even in India the line from Bombay to Calcutta is not entirely complete. Professor Chenery therefore does well to offer his practical suggestions for carrying out Sir Macdonald Stephenson's unfulfilled visions. He draws encouragement from accomplished facts which his precursor could hardly dream of. The great Atlantic and Pacific Railway, now actually opened, might well have appeared in 1855 a far more chimerical enterprise than the chain of lines from Constantinople to Kurrachee. In those days, too, it might have naturally been doubted what the Ottoman Government might say to such projects, whereas, as Professor Chenery now explains, the Porte is anxious to see railway communication introduced into its dominions, and is at this moment intent on connecting the capital with the European system of lines. Nor do our advantages end here. From the pioneering of the United States we have learned not only how to construct cheap railways, but how to endure railway traveling. A seven days' journey would be intolerable on the English system of locomotion; it would be no trial at all in carriages equivalent to moving hotels. As to distances, the sections, no doubt are of considerable length—1,700 miles from Calais to the Bosphoros, 1,500 more from the Bosphorus to Bussorah, and then the run from Bussorah to the Indian terminus. But the Americans have 40,000 miles of railway open, and Sir John Lawrence reckons that 30,000 will sooner or later be wanted for India alone, so that we need not think much of the work required to bring, as Professor Chenery expresses it, the 280,000,000 of Europe into communication with the 500,000,000 of Asia. We have, in fact, now learned how to make railways both cheaply and expeditiously; we have learned how to adapt the arrangement of the carriages to long journeys; we are keenly alive to the value of rapid communication with India, and we know that some, and can believe that others, of the Powers whose territories are to be traversed by the proposed line will cordially co-operate in the work. The Turkish Government desires nothing more than to see the necessary lines intersecting its territories, and, though nobody can exactly answer for Persia and Beloochistan, we do, at least, know from experience that such populations as we should meet with in those parts are well acquainted practically with their own interests, and rarely unwilling to strike a profitable bargain. In all probability we could easily make it worth the while of both chiefs and people to furnish the police of the line for us, though we could hardly expect to encounter foes so troublesome as the Red Indians have proved to the Americans.

Such is the prospect placed by Professor Chenery before us, and nobody can pretend to doubt either the importance or the value of a line which will have "*all Europe at one end and all Asia at the other.*" But what is to be the cost, and how is the money to be found? We are told that the Turkish Government would actually make the line itself as far as the Persian Gulf if it could but command the means, and that it would cheerfully and liberally enter into engagements for the purpose with richer and more powerful States. Would it, then, be unreasonable or impolitic for the British and Indian Governments, in conjunction, perhaps, with others, to find the necessary capital on security given by the Porte for current interest and ultimate repayment? That is the practical question to which the pamphlet brings us. If any of its "suggestions" should appear extravagant, let it be remembered that the whole project was deemed not only feasible, but probable, in a professional estimate, nearly twenty years ago. If the notion of a railway 5,000 miles long should seem a little wild, let the reader remind himself that its object is nothing less than to bring Calcutta as near to London as Edinburg was a century ago.—*London Times.*

The Allentown Railroad.

The Allentown *News* says that about 400 men are employed on this road. The excavation of the tunnel, through the mountains at Windsor Castle, is about being commenced under the supervision of Mr. Paul King, Engineer. It will be 1,100 feet in length. Mr. McFadden, the contractor, expects to have the road in running order within a year from this time. The road intersects with the East Penn. at Topton Station, and with the Philadelphia and Reading at Port Clinton.

☞ G. H. Meade, Chief Engineer of the Little Rock and Ft. Smith Railroad, will receive proposals at his office in Little Rock, Ark., until the 20th of October, for clearing, grubbing, grading, furnishing cross-ties and bridging a part or the whole of the road, commencing on the line 20 miles from Little Rock. Proposals will also be received at the same time and place, for building a bridge across the Arkansas River, at Little Rock.

☞ Benj. H. Latrobe, Esq., Chief Engineer of the Pittsburg and Connellsville Railroad Company will receive proposals at Pittsburg or Cumberland, until the 1st of November, for supplying the Cross Ties for the entire length of about 85 miles of the road, from near Connellsville to near Cumberland. The number per mile will be 2,112, and the whole number about 210,000.

☞ The following gentlemen have been elected directors of the Louisville and Nashville Railroad for the ensuing year: H. D. Newcomb, W. S. Caldwell, R. H. Robinson, G. W. Norton, J. G. Baxter, W. H. Smith, James Whitworth. The directors were authorized to construct another track from Louisville to Lebanon, Ky., as soon as the finances of the company will justify the expenditure.

☞ The directors of the Connecticut Valley Railroad have elected the following officers: President, James C. Walkley, of Haddam; Vice President, Luther Boardman, of East Haddam; Treasurer, Nelson Hollister; Chief Engineer, Seth E. Marsh, and Secretary, Levi Woodhouse, all of Hartford. The survey of the road will proceed immediately.

☞ J. B. Walton, Chief Engineer of the Detroit, Hillsdale and Indiana Railroad, will receive proposals at his office in Hillsdale, Mich., till 4 p. m., October 20th, for the grading, culverts and bridging this road from Ypsilanti to Hillsdale.

☞ The earnings of the Cleveland, Columbus, Cincinnati and Indianapolis Railroad for September, 1869, were $320,025, against $287,451 in September, 1868, a gain of $32,574.

☞ The grading of the Portland and Ogdensburg Railroad has been commenced on the first section of 16 miles from Portland to Sebago.

7 PER CENT. GOLD BONDS,

RETURNING $223 75 IN GOLD MORE PER ANNUM, BY AN INVESTMENT OF $10,000 IN THESE, THAN IF $10,000 WERE INVESTED IN GOVERNMENT SIXES.

$2,500,000

CHICAGO, DANVILLE & VINCENNES RAILROAD COMPANY

SEVEN PER CENT.

FIRST MORTGAGE SINKING FUND BONDS,

FORTY YEARS TO RUN,

PRINCIPAL AND INTEREST PAYABLE IN NEW YORK IN

UNITED STATES GOLD COIN,

AT PAR

SECURED BY FIRST MORTGAGE UPON 140 MILES OF ROAD, THE FRANCHISES, EQUIPMENT, AND ALL FUTURE ACQUIRED PROPERTY BEING AT THE RATE OF

LESS THAN $18,000 PER MILE.

The road extends from Chicago by way of Danville to a point on the boundary line of Indiana, in the direction of Terre Haute and forms part of the

Shortest Through Line from Chicago, via Terre Haute, Vincennes, Evansville and Nashville to New Orleans, Mobile and Pensacola.

It passes through the eastern tier of Counties of Illinois, adjoining Indiana, the whole country being well settled and highly cultivated, and not surpassed in richness of soil by any portion of the Prairie States. Its products must always find their best market to the Atlantic seaboard by way of Chicago and the lakes, which is fully demonstrated by the fact that the value of farming land in Illinois chiefly depends upon the facility of communication between it and Chicago.

Assuming that ONLY ONE-HALF OF THE PRESENT FARM PRODUCTS (as shown by the assessment rolls) of the townships depending upon this line for an outlet will be transported over this road, and basing the passenger business at forty per cent. of the freight earnings, (which is the result obtained upon other roads in the State,) the gross earnings of the road,

Exclusively from local business, will be about $2,200,000, and estimating the operating expenses upon a new road at 66 2-3 per cent., the net revenue will be about $733,000,

being nearly three times the sum required to provide for the interest and sinking fund upon the entire issue of bonds.

THE COAL FIELDS

upon this line, and tributary to it, furnish an important element to insure the future very great success of the road.

In addition to the inexhaustible beds of coal and iron ore in the vicinity of Danville, Vermillion County, Illinois, it connects also with the

CELEBRATED BRAZIL COAL MINES,

the coal from which is of unequaled quality for the manufacture of iron, being ENTIRELY FREE FROM SULPHUR, AND NEARER PURE CHARCOAL THAN ANY KNOWN COAL DEPOSIT IN THIS COUNTRY.

The distance from these coal fields to Chicago by this road is

90 MILES LESS THAN BY ANY OTHER ROUTE.

Chicago alone consumes at present 600,000 tons a year, which is increasing about 100,000 tons per annum.

The estimated cost of the construction and equipment of the road is about $4,500,000. Stock subscriptions have been made to the extent of $2,100,000, a large portion by the people on the line, which is sufficient to pay for the right of way, grading, bridges, culverts, and all work of a similar character for the entire road.

The Line is Completed to Momence, 55 Miles from Chicago.

and open for business, and every effort will be made to finish the entire road in time for next season's crops.

The iron is already provided for, and a large amount of equipment is under contract, and in progress of delivery. To meet a portion of these expenditures, a part of the $2,500,000 of the above Bonds are offered, at present at 95 per cent. and accrued interest in currency.

The advantage of an investment of this character over an investment in Government sixes is thus shown:

$10,000 invested in Governmrnt 6s at 20 per cent. premium gives	$8,333 33
$10,000 invested in Chicago, Danville and Vincennes gold 7s gives	10,500 00
Interest on $8,333 33 Government 6s, less 5 per cent. tax, gives	475 00
Interest on $10,500 C., D. and V. 7s, less 5 per cent. tax, gives	698 25
A gain in favor of C., D. and V. 7s of gold...	$223 75

Holders of Government bonds can exchange them for these bonds with a handsome profit in hand, varying from $276 to $282 if it be 6s or 5-20s, to which will be added the above large yearly gain of interest by such exchange.

To adhere to our positive rule never to offer anything for sale which we do not of ourselves believe to be good, we add that we have personally examined this entire line of road, finished and projected, as well as the country through which it runs, its full character and capacity for verifying the foregoing statements, and the result is we offer these Bonds with entire confidence in their value and soundness.

Pamphlets in more complete detail, with maps, can be had of us.

AMERICAN INSTITUTE EXHIBITION. OPEN DAILY FROM 9 A. M. TO 10 P. M. ON THIRD-AVENUE, Cor. SIXTY-THIRD-ST. near Central Park.

THE MACHINERY IN MOTION

is a Grand Display. The Exhibition is Enlivened WEDNESDAY and SATURDAY AFTERNOONS, and EVERY EVENING, by A FINE ORCHESTRA. Refreshments of the Best Kind at Moderate Prices in the building. Season tickets for Gentlemen, $3; for Ladies, $2; Single Admission, 50 cents; Children under 12 years, 25 cents. Packages of 25 tickets for Shops at 30 cents each. Entrances on Second and Third-aves. HOW TO GET TO THE FAIR—The Second and Third-ave. and Belt Line Railroads, with Extra Cars Running, Intersecting all the other Avenue Railroads and Ferries, Afford Ample, Cheap, and Direct Means of Access. Also in Carriages from Central Park by Sixty-second-st.

Novel Rail Fasteners and Safety Car Stove.

These fasteners have a jaw and collar to swivel on the fasteners and when revolved half round the rail is released. The Stove is a cylinder cast having a tube or or inverted cone on the bottom with a large flange holding the stove above the iron floor, and projecting under to receive the chamber attached, which receives the waste; also self feeder, the valves are perforated to give draft. These are highly recommended by railroad men as superior to any now in use. Both on hand and for sale by the inventor.

A. BEEBE,
78 Cedar st., N. Y.

SMALL LOCOMOTIVES, suitable for Construction, switching and Branch Road service, also for Street Railroad service, enclosed with Cab. Apply to

PETER FIELDS & SON,
North Point Foundry and Machine Works, Jersey City, N. J.

FIRST & PRYIBIL'S
PATENT IMPROVED
BAND SAW MACHINE,

452, 454 & 456 Tenth Avenue,
NEW YORK CITY.

PRICE - - - - - $350.
BOXING AND SHIPPING, $10.

This Machine, with the exception of the table, is made entirely of Iron. Its weight is 1800 lbs.; drums 3 feet 3 inches in diameter; height, 8 feet 5 inches; depth 4 feet 3 inches; width 6 feet; driving pulleys usually 14 inches in diameter, or to suit our customers.

Our machine can be run with a speed of 330 to 350 revolutions per minute, causing the saw to travel 3300 to 3500 feet per minute, and with a belt from 4 to 5 inches in width a block of Rosewood from 10 to 15 inches thick, or wood of any kind, hard or soft, can be cut with ease and facility, the saw being from one-quarter inch to one inch in width. A saw one-eighth of an inch in width, including teeth, can be used for cutting wood of considerable thickness.

The saws are not liable to break owing to our improved slide bearing, which adjusts itself according to the expansion and contraction of the saw. No saw will break except by accident or gross carelessness. The same is used principally by railroad car, chair, and other furniture manufacturers, ship, boat, and wagon builders, and also to saw slate, ivory, bone, &c. Guarantee will be given for all we state above. From three to five times as much work can be done with one of our sawing machines, as with an ordinary up and down saw. The work is cut smooth, the saw being retained by an improved guard.

At the present time, Sept. 1869, 64 of our machines are running in this city, and about twice as many in the country.

We also manufacture a lately patented counterbalance oval turning lathe which can be run with more than twice the speed of the old style of lathes, and much more and better work will be done. Many other wood working machines, and also shafting, pulleys, hangers, &c., &c., constantly on hand. Send for Circulars.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

BURLEIGH'S PATENT

Pneumatic Rock Drill

Is now in successful working operation in New York, Chicago, Jersey City; also at the Hoosac Tunnel (Mass.,) Lake Superior, Colorado and Nova Scotia Mines, Union Pacific and Boston and Hartford Railroads; also in deepening the beds of the Illinois and Michigan Canals, and Des Moines Rapids, and numerous other localities.

The Burleigh Drill is adapted to all kinds of rock cutting in open cut Mining, Tunnels, Sewers, Quarries, &c., drilling holes from 1¼ to 5½ inches in diameter. The Drills are worked either by steam or compressed air. For all kinds of work under ground compressed air is used, serving as a perfect ventilator, as it is exhausted from the Drill. At the Hoosac Tunnel the compressed air is carried upwards of a mile and a quarter, and at that distance works eight Drills at the same time. Information in regard to the ownership of the different State rights. Prices of Drills, Air Compressors, &c., can be obtained at the office of

Utica Head Light Works.

We take pleasure in calling the attention of Purchasing Agents and Master Mechanics to the advertisement of Mr. J. A. Williams, which appears in our columns elsewhere. Mr. Williams is a practical Head Light Manufacturer, and pioneer in this branch of business, having been engaged therein uninterruptedly for over 18 years, and is the original inventor of the Coal Oil Burner for Head Lights. During this time the constantly increasing demands for his lights has obliged him to increase his facilities for their manufacture, and to-day he has the largest establishment of this kind in the world. His lamps are covered by four Patents, the latest of which is alluded to in his advertisement, viz: a Coal Oil Head Light, with a Brazed Safety Burner. The peculiarities of this burner are: simplicity of arrangement, great force and steadiness of flame at all speeds, and entire freedom from explosion or heating. The different parts of the burner are *brazed* instead of being put together by soft solder or screws, and the arrangement is such that a large amount of cold air is kept constantly passing around the inside and outside of the entire length of the wick tube, so that it is kept cool at all times. The preference is given these head lights by the great Pacific Railway Co., and nearly all the other principal railroads of the United States, and are spoken of in the most favorable terms by all. Mr. Williams supplies these lights either in square or round cases. A cut of the latter form, showing the general appearance of the most recent design, is seen in his business card. He also furnishes all other styles of head lights, and different parts of each, such as burners, wicks, chimneys, &c. Mr. W. is an energetic business man, and to him Railroad Companies are indebted for the many valuable improvements added to head lights within the last 18 years, and is so acknowledged by all railroad men who are familiar with his inventions.

The American Institute National Exhibition.

For forty years past, with but two annual intermissions, the American Institute has held Annual Fairs, first at Masonic Temple, corner of Broadway and Pearl street, then at Niblo's Garden, later at Castle Garden, then again at Niblo's Garden, at the Crystal Palace on Resorvoir Square, at the Academy of Music, at the Armory on Fourteenth street, and this year at the Empire Skating Rink, at the corner of Third Avenue and Sixty-third street, three blocks from the Fifth Avenue entrance to Central Park, and directly approachable by all the Avenue City railroads and ferries intersecting the Belt Road, and with entrances on Second and Third Avenues. The arrangement of the Exhibition has been based upon the system adopted at the Paris Exposition, and consists of seven departments, named as follows: Of the Fine Arts and Education, of the Dwelling, of Dress and Handicraft, of Chemistry and Mineralogy, of Engines and Machinery, of Intercommunication, of Agriculture and Horticulture. Under each of these depratments there are seven groups, into which are arranged similar and congruous articles. Each of the departments is under the charge of a committee of the Managers of the Institute, with intelligent floor clerks. The present Exhibition consists of more than a thousand entries, containing over five thousand separate articles. The display of woolen manufactures, consisting of the various kinds of fine cloths, ladies dress goods, hosiery of all kinds, blankets, braids, carpets, and bunting, all of American Manufacture, is one of the most remarkable and interesting ever made in this country, and proves conclusively that we can clothe ourselves. In the department of Machinery, there are five horizontal, and several upright steam engines, driving some of the most ingenious and novel machinery to be found in the world. The Bullock Printing Press, printing newspapers from rolls of white paper, on both sides at the same time, and automatically cutting them off, and delivering them to the folding machine by its side, attracts a constant throng of curious and wondering visitors. Lyall's Positive Motion Looms, weaving cloth six yards wide, and silk dress goods, also justly attract great attention. A pump, an Organ, a Sewing Machine, and a clock, are driven by Electricity. Niard's Steam Boiler Attachment, for equalizing the temperature of steam, water, and heating surfaces of locomotive and other boilers, for the prevention of unequal expansion, ruptures, leaks, and explosions, is exhibited for the first time. A locomotive turntable, as nearly anti-friction and perfect as can well be conceived, is exhibited, and is worthy the attention of all railroad engineers. Also a car wheel, constructed to prevent concussion, and the destruction of rails, and some new plans for constructing railroad cars. In the Agricultural department, there are many greatly improved farming tools, including a sheep shearing machine, and some of the finest specimens of fruits, potatoes, and other vegetables, ever exhibited in the country. Rockwood, the Photographer, exhibits a completely perfected apparatus for taking Ferrotype pictures by artificial light, thus enabling the artist to do copying work, and to make pictures in cloudy days or at night, with certainty and satisfaction. Kurtz shows the finest plain Photographs to be found in the world. The management of the present Exhibition, is energetic, painstaking and satisfactory. The general effect of the Exhibition, as seen from the gallery, is magnificent and imposing in the extreme, as the Rink is a grand arch, seventy feet high, three hundred and fifty feet long, and a hundred and seventy feet wide at the floor without a visible support. The Machinery and Boiler department, is in an extension at the eastern end, one hundred

by a hundred and seventy feet. Merchants and others from the country should not fail to visit this noble and instructive Exhibition.

Portland, Saco and Portsmouth Railroad.

The earnings of this road for the years ending May 31, 1868 and 1869, were as follows:

	1868.	1869.
From passengers	$296,441 37	$307,786 01
" freight	195,092 88	237,238 58

The extensive improvements near the westerly end of Portland bridge are completed. The site consist of some seven acres of upland and flats. The latter enclosed by a sea wall, nearly 1,100 feet in length, and about 16 feet in height, substantially backed with ballast.

The large area thus enclosed has been nearly all filled with gravel brought from the company's land in Scarboro'; and on this new-made land in part, a machine shop 150 by 60, and a wood shop of same dimensions, has been erected; and in the rear, near these buildings a blacksmith shop 65 by 40 feet. A large dry house 130 by 30 feet is also conveniently located on the premises for the storage of lumber.

The turn table, 50 feet in diameter; engine house, measuring 430 feet on the back, and 240 feet on the front, covering sixteen pits, are built wholly on the new-made land. The foundation of these last, as well as that of the sea wall, rests upon piles driven from 16 to 30 feet in the mud, and cut off at low water mark, and of these more than 2,000 were used under the foundation of engine house and turn table. About 2,000,000 of brick were used in the construction of the buildings; and a large quantity of rough granite for covering the piles.

The tools from the old shops have all been set up in the new ones, and a small addition, not exceeding in value $6,000 has been made. The whole is now in successful occupancy and operation.

These long needed improvements add greatly to the facilities of the company in carrying on its increasing business.

Two substantial granite abutments have been erected at crossing of Great Works River, about two miles east of North Berwick. Several other important pieces of masonry have been entirely rebuilt or thoroughly repaired.

880 tons of re-rolled iron rails were procured from the Portland Rolling Mill, during the past summer; 300 tons of which, were laid in the track, prior to the date of our last report; and 372 tons have already been laid down the present season, making a total of 952 tons from June, 1868, to June, 1869.

17,500 new sleepers, all of cedar, were also put into the track the past summer.

Extensive and thorough repairs have been made on Portland bridge and draw.

The requirements of the present year will be fully as great as those of the past; and contracts for iron, sleepers, and other material, have been made and partially filled already.

The motive power has been increased by the addition of two new engines—Both are first-class engines, and seem in all respects adapted to our wants.

The work in the machine and repair shops, now executed in the new premises, has been carried on promptly and advantageously, and engines and cars, kept in good and efficient condition. Five new freight cars have been purchased, and several others have been rebuilt and turned out good as new.

The general operations of the Road the past year have been satisfactory. The business upon it having been done with great regularity and promptness.

Number of miles run, 303,266. Expenses per mile, $1.32. Av. receipts per mile, $1.89½. Per cent. of receipts used in expenses, 69.5. Number of passengers carried, 361,960.

President.—ICHABOD GOODWIN.
Treasurer.—E. NOTT.
Superintendent.—FRANCIS CHASE.

West Amesbury Branch Railroad.

At a meeting of the citizens of West Newbury, Mass., on the 18th inst.; it was voted by a large majority to take stock to the amount of $50,000 in the West Amesbury Branch Railroad, a road chartered last June to run from the Boston and Maine Railroad in Groveland through the villages of West Newbury, West and South Amesbury to Amesbury Mills. Amesbury is expected to subscribe a still larger amount, which, with private subscriptions, will secure its building, thus giving to two of the only three towns in Essex county without a railroad those facilities so necessary to their growth and prosperity.

Boston, Concord and Montreal Railroad.

The earnings of this road for the years ending March 31, 1868 and 1869, were as follows:

	1868.	1869.
From passengers	$173,647 82	$173,323 12
" freight	299,018 61	326,795 85
" mails	7,714 60	18,900 01
" express	5,315 50	5,000 01
" miscellaneous	981 21	545 31
	$486,674 74	$524,564 30
Expenditures, viz:		
Maintenance of way	$131,296 55	$151,102 85
" motive power	71,901 16	103,184 67
Cost of working road	98,676 47	103,733 49
" management	10,166 56	10,404 87
Miscellaneous	28,685 11	20,874 98
	$335,725 85	$389,300 86
Net balance	$150,948 89	$135,263 44
Balance March 31, 1868		222,357 22
Interest received during the year		8,122 46
Engineer department, less than last year		1,075 08
In hands of superintendent, less than last year		1,072 21
Total		$367,890 41
Appropriated as follows:		
Paid coupons, back coupons, expenses of paying the same, interest on overdue bonds, discounts on sale of sinking fund bonds, during the year, etc		$59,679 07
Paid preferred stock dividends		44,895 00
Wood, oil and stock on hand over last year		6,356 53
Paid Trustees of sinking fund		12,500 00
Paid sundry expenses		3,333 78
Bonds and cash on hand		241,126 03
Total, as above		$367,890 41

Compared with the previous year, the gross earnings show an increase of $37,889 56, with an increase in expenses of $53,575 01—making the decrease in net earnings, $15,685 45. The report says:

Our gross receipts have been more for the past year than for the year previous, a portion of which is from the payment of the back balances due from the post office department for carrying the mails, and which makes the receipts from that source more than the usual yearly payment.

Our expenses have increased in repairs, etc., so that our net earnings are less than the last year, and are accounted for in part as follows:

We have laid 998 tons of new and re-rolled iron, against 731 tons last year. We have purchased 2 new monitor top cars; have built 76 freight cars, against 26 last year, and have made full and complete repairs in all the different departments, so that the road way, superstructure, motive power and equipment, are in as good average, if not better condition, than at any previous time, and will compare favorably with any road in the country.

Our business arrangements with connecting roads remain the same as at our last report.

The usual payment of $12,500, to the sinking fund has been made, which, with the accumulations, now amounts to $228,000.

We have paid and charged in the accounts, the two dividends on the preferred stock for the year, and see no reason why they will not continue to be regularly paid.

The bonds known as convertible mortgage bonds, amounting to $350,000, viz., $200,000 7 per cent., and $150,000 6 per cent., become due July 1st, 1870. Arrangements for payment or extension of them will have to be made.

In accordance with the agreement made between the corporation and the White Mountains, N. H. Railroad, for the extension of the road beyond Littleton, which was confirmed by the stockholders of both corporations at special meetings held at Concord, the 29th day of August last, the directors made a contract with Messrs. Kenrick, Chamberlain and Bishop, to build the road from Littleton to Wing road and Whitefield, and work was commenced late last autumn, and continued through the winter with fair success; but owing to the inclement weather in March and April, there has not been so much progress made as could have been wished. The contractors hope to have it done so that the track can be laid to the Wing road early in June.

There has been paid towards the contract, for labor and iron, about $87,000 which is not included in the accounts, but has been paid by money advanced outside, and will have to be repaid hereafter.

The President, by authority of a vote of the directors, has given notice that this company or the White Mountains, N. H. Railroad, will apply to the Legislature for authority to build a road from some point on the extension in Bethelem or Whitefield, to the Fabyan place and the base of Mount Washington, and will make such application to the Legislature.

This will be a branch road, and, as the freight will be all down, can be built with high grades and at a moderate expense, a large proportion of which will be contributed by those who will be benefitted, and if it can be done in this way, will be a benefit to this road.

In accordance with the vote at the last annual meeting, a committee was appointed to consider the subject of consolidation of the stock, and it is expected that they will report at the annual meeting.

The total number of passengers carried during the year was 125,169; equal to 7,610,140 carried one mile. Total number of tons of freight, 69,791, equal to 4,187,460 tons carried one mile.

TRIAL BALANCE, MARCH 31, 1869.

Construction	$2,850 000 00
Wood and oil on hand	18,012 74

President.—JOHN E. LYON.

Directors.—John E. Lyon, Alexander H. Tilton, J. P. Pitman, Peter Butler, John L. Rix, John A. Parks, Joseph W. Lang.

Treasurer.—EDWARD HARLOW.

Superintendent.—J. A. DODGE.

☞ The following gentlemen have been elected directors of the Louisville, Cincinnati and Lexington Railroad Company: Josiah Speed, C. N. Warren, J. Guthrie Coke, J. W. Kalfus, R. C. Hewitt, Marvin Green, Henry Belle, M. C. Johnson, and T. K. Hunt. A resolution was unanimously adopted rejecting the river line for the connecting line between the Louisville and Nashville and the Louisville, Cincinnati and Lexington roads. The directors were instructed to secure a connection with the least possible delay.

☞ At a recent meeting of the directors of the Portchester and Ridgefield Railroad at Long Ridge, Conn., the report of the engineer, together with his profiles and maps of the proposed road were accepted and approved. According to the surveys, the road will be twenty-three miles long, and its greatest variation from a direct line will not exceed half a mile. The present estimates are less by $40,000 than the sum indicated by the preliminary surveyors.

☞ The Waynesburg *Republican* says that the Monongahela Valley Railroad Company has proposals from three different parties, each of which is anxious to go to work at once upon the road. About the first of January next a new set of officers of the company will be elected, when the building of the road will be at once undertaken.

☞ The Chicago *Railroad Gazette* says that the Davenport and St. Paul Railroad is to be commenced immediately. The President and Executive Committee now advertise for proposals to grade and bridge from Davenport to De Witt, the crossing of the Northwestern, a distance of 22 miles.

☞ The White Mountain Railroad, which is now extending towards Northumberland, has been completed to the line of Whitefield, is now open to the Wing Road, six miles beyond Littleton, and is run regularly in connection with the Boston, Concord and Montreal road.

☞ The route of the Port Royal and Augusta Railroad has been surveyed from Port Royal to within ten miles of Augusta. Rails have been shipped from New York, and it is thought that the road will be completed by next May.

☞ The western extension of the European and North American road, from St. John to the State line, will be open to traffic about the middle of November.

From the Iron Age.

Northern Pacific Railroad.

LETTER FROM AN ILLINOIS FARMER.

ROCKFORD, ILLINOIS, October 2, 1869.

Dear Sir: I saw by your paper of the 23d ult., that you expressed a desire to see the report of my friend, the Railroad Commissioner, I referred to in my letter of the 18th. I have obtained his permission for you to publish such parts of it as I might select. Accordingly, I have copied such portions as I think will interest your readers, and herewith inclose it. If, on looking it over, you should think it not worth while to print it, you can return it to me without any fear of giving offense to my good friend, who, I can assure you, cares as little about notoriety as any one I know.

Your obedient servant,

AN ILLINOIS FARMER.

NORTHERN PACIFIC RAILROAD.

September 25, 1865.

The importance of a railroad across the American Continent, within the territory of the United States, by the shortest route, to connect China and Japan with the Atlantic cities, is the great question of the day.

The steamers' route from San Francisco to Japan will be up the west coast of America, as far as the north end of Vancouver Island; and thence westward across the North Pacific Ocean, to avail of the short degrees of longitude, the same as is now done in running from New York to Liverpool. The "northing" thus made will be near nine hundred miles. The distance from San Francisco to the straits of San Juan de Fuca is about eight hundred miles. It is thus seen, if direct communication can be had between New York city and that point, the distance between New York and Japan will be several hundred miles less than that by San Francisco.

Two very important considerations are to be taken into account in building a line of railroad—character of the country through which the road is to run, and materials with which to construct it.

The country between the Missouri River, at Omaha, and the city of Sacramento, has been so often described, and is so well known that it is not necessary to refer to it in this paper; suffice it to say, however, that at least 1800 miles of continuous rail will be required to connect those two points. It is equally true, on the other hand, that, using the navigable waters of the Upper Missouri and Columbia Rivers, a communication can be had between the Mississippi River, near St. Paul's, and Puget's Sound at Olympia, with less than nine hundred miles of railroad. Thus:

	Miles.
The distance by rail from the Mississippi River to where the Northern Pacific road will cross the Missouri River, is	450
The distance by rail around the Great Falls of the Missouri is	20
By rail from head of navigation on the Missouri to that on the "Jocko," is	150
By rail around "Thompson's Rapids" on Clark's Fork of the Columbia is	4½
By rail around the Rapids at "Cabinett Landing," on the Columbia, is	7½
By rail from "Pend d'Orielle Lake" to the Columbia below Lewiston, is	125
Around the Rapids at "Dalles" and Cascades of the Columbia, is	20
From the mouth of the Cowlitz to Olympia	80
Total	857

It is a question to be solved, whether a railroad will pay the great cost of constructing it from Seattle, on Puget's Sound, up the Dwanish River, though "Yakima Pass," down the Yakima River to the crossing of the Columbia near Wallula, or not—for it is almost taken for granted that no attempt will ever be made to run the road due east from the "Cascade Mountains," to the "Spohane," and thence to Pend d'Orielle Lake. The report of Captain Maclellan, who examined the

most of that line, certainly, is not very encouraging.

As the law of Congress authorizes building what is known as the "Columbia River Branch" of the Northern Pacific road, from near Wallula to the mouth of that river, or "at or near Portland," it is suggested whether or not it would be good policy, for the present at least, to build a short road of 80 miles from Olympia on Puget's Sound to the mouth of the Cowlitz, a point only about 60 miles from the sea, and then unite with the Oregon Steam Navigation Company's Steamers on the Columbia, and use them as a means of communication as far up that stream and its tributaries as they can navigate.

From the mouth of the Cowlitz to the Cascades, about 100 miles, the Columbia is a broad, deep river, not unlike the Mississippi at New Orleans. A railroad is in operation five miles around the falls at the Cascades. From the Cascades to the Dalles the navigation is good. At the Dalles a railroad fifteen miles long, in good order, is in operation to the head of the rapids.

From the Dalles to Wallula, 125 miles, the navigation is always good. From this point to Lewiston the navigation is sometimes interrupted, when the water is low, but the shoal places could easily be removed, and thus make the communication to that point permanent and reliable.

From Lewiston to Pend d'Orielle Lake, the distance overland is one hundred and twenty-five miles, which break would have to be united by a railroad. At Pend d'Orielle Lake the Oregon Steam Navigation Company have boats which run up the lake and Clark's fork of the Columbia fifty miles to "Cabinett Landing," the first rapids on the fork. The portage around the rapids here is 7½ miles, which would require a short railroad. Above these rapids the company are building a boat to run farther up Clark's Fork (with only one portage at Thomson's Rapids,) and its tributary, the "Jocko," to a point not more than 150 miles from the head of navigation on the Missouri, above the great falls of that river, near Fort Benton.

The Oregon Steam Navigation Company is a strong, wealthy concern, with a paid up capital of over two million dollars, invested in their twenty and odd boats, railroads around the "Cascades" and Dalles, with the necessary wharves and warehouses to accommodate their present extensive business.

They are prepared to meet the Northern Pacific Railroad Company at almost the very summit of the Rocky Mountains, long before that company can reach that point from the East; so that the great cost for steamers to navigate the Columbia River (as stated by Gen. Simpson in a report he made some time since to the Hon. United States Secretary at War on this subject) is erroneous. The writer has been repeatedly told by the officers of the Oregon Steam Navigation Company, that they will not only furnish the boats required to do all the business the railroad can bring to them, and take their "chances" for compensation, but would aid in improving the shallow parts of the streams where necessary.

Any one at all acquainted with steamboating on our Western Rivers, knows full well that railroad companies always find boatmen quite ready and willing to make freighting and passenger arrangements and connections with them, without cost to the such railroad companies.

Well informed parties who have been engaged in steamboating on the upper Missouri, state that the navigation of that stream, from where the Northern Pacific Railroad will cross it, say near Fort Clarke, to Fort Benton; and, also, from the Great Falls above Benton for about one hundred miles, is practicable and perfectly reliable, at least seven months in the year. How far the Yellow Stone can be navigated has not yet been ascertained.

As regards building the Olympia Branch from the Columbia River immediately, it may be remarked, that it is not absolutely necessary, for the entrance to the mouth of the Columbia for the largest steamships is entirely feasible. It is quite true that the "bar" at the mouth of the river is bad and rough; yet there are thirteen fathoms of water on it, and the steamers from San Francisco to Portland, Oregon, make their weekly trips with perfect regularity. It is therefore suggested that this Olympia connection be deferred for the present, and that the line be first built from Lewiston to Pend d'Orielle Lake, one hundred and twenty-five miles; for which the rails and rolling stock can be taken *via* the Columbia River. In the same way such material could be taken for the road around the Rapids of Clarke's Fork, above that lake. For the road around the Great Falls—above Fort Benton—of the Missouri, and from the head of navigation above Benton to that on the "Jocko" River, such material could be taken by the Missouri River from Omaha. For that part of the line east of the Missouri they could be taken over the "Transit Road," or a part might go up the river, also, if it should be desirable to work from both ends of the line east of the Missouri River at the same time.

It is thus seen that the Northern Pacific line, unlike the "Union Pacific," which has to be built over 1800 miles before a communication can be had from one ocean to the other, and that a continuous line, which can only be built from the two ends, is susceptible of being made at several points at the same time; and that the length of road to make the transit of the continent is less than one half as great as that of the "Central" or "Union" Company's line. When the so much less amount of road to build, and abundance of timber on nearly the whole line of the Northern Pacific road, are contrasted with the great distance from the Missouri River to the Sierra Nevada Mountains, and the almost entire absence of timber for superstructures and bridges over that distance—some 1800 miles—on the Union Pacific line, it would seem as though there could be no comparison between the feasibility and value of the two enterprises.

There is another important feature respecting this Northing Pacific line well worthy to be mentioned. The isothermal lines from latitude 36° to 40° north, on the Atlantic coast of the American continent, run far to the north, as we go westward north of that parallel of latitude. The temperature in latitude 47° north, at the east base of the Rocky Mountains, is about that of St. Louis, in latitude 39°, on the Mississippi River, while still farther to the west, in British Columbia, the Hudson Bay Fur Company raise barley in 65° north.

Colonel Alexander Majors, the celebrated Government freighter over the plains for so many years past, states that his oxen subsist better during the winter months on the Yellow Stone, and come out in the spring in finer condition than they formerly did on the head waters of the Arkansas, notwithstanding there is over ten degrees difference of latitude in the two places. The writer traveled from Salt Lake City *via* Fort Hall, on the Upper Columbia, Boise City, Idaho Territory, Grand Ronde Valley and the Blue Mountains of Eastern Oregon, thence to Portland by the Columbia River, in the months of January and February, 1865. The climate of Boise and Grand Ronde Valleys (lat. 46 and 47,) was at that time like April in New York city. Descending from the Blue Mountains (lat. 47) to the Valley of the Columbia, at Umatilla, the temperature was so mild that an overcoat was uncomfortable. Cattle and horses were grazing everywhere on the plains as they would be with us in early May. Going down the Columbia, in February as it was, ladies and gentlemen promenaded the deck of the boat with as much pleasure as they would a North River steamer early in June. It was difficult to realize, but such was the case. "Isothermal" theories may be taught and studied, but nothing so convinces one of their truth as to experience their influence in that latitude in mid-winter.

As regards the particular "Pass" through the Rocky Mountains that will be adopted, of course only practical engineering can decide that point. But there will be no difficulty on that score, for there are "Lewis and Clark's," "Codottes," "Hell Gate," and two or three others already known, where the grades will be very light as compared with many other mountain roads in this country and in Europe, while it is not at all improbable that other and better passes may be discovered when a thorough, practical examination shall have been made.

CHARACTER OF THE COUNTYY.

When the character of the unoccupied lands of the United States is considered, it will be seen that the Northern Pacific Railroad, running as it does through the choicest of them, is destined not only to sell its own lands rapidly, but will be the means of locating upon the Government lands, in the great Northwest, a large population of agriculturists and miners.

That "the area of good agricultural lands in the Territory of the United States is almost without limit," is an erroneous opinion. A large part—if not the greatest portion—of the country in the United States south of the 43d parallel of north latitude; west of the 98th meridian of west longitude, and east of the Sierra Nevada Mountains in California, can only be cultivated by irrigation, and the irrigating can only be done in the valleys of streams. This is caused by the almost total absence of rain in the area here described. North of the 43d parallel there is an abundance of rain as far west as the Blue Mountains of Oregon. West of the "Cascade" Mountains in that State, and Washington Territory, there is, if any thing, too much rain. The lands north of this line, and west of the Mississippi River, are very fertile and produce crops equal, if not superior, to those raised in the old "Western" and "Middle States." Minnesota is claimed to be the most reliable wheat growing State in the Union, and it is believed the broad and fertile prairies and timber lands of Dakota will be found to be equally productive.

Montana will, at no distant day, be as famous a sheep and cattle growing country as it is now for its almost fabulous yield of the precious metals.

Idaho is coursed through its entire length and breadth with the richest of valleys skirting it, thousands of mountain streams, brooks, and rivers. "Deer Lodge" valley, in this Territory, is said to have yielded large crops of wheat this past season. This country will soon produce more food for man and beast than its extensive mining districts will require. What an inducement is here presented to the farmer and stock grower? A home consumption at his very door for the greatest portion of his products, and a railroad to carry his surplus to market. The valley of the Yakima River, from the junction of that stream with the Columbia near Wallula, for a distance of seventy-five miles toward the "Cascade" Mountains in Washington Territory, is said to average from five to eight miles wide, with a rich, alluvial soil, producing the finest of grass for its entire length. There is no better farming country on the continent than that found on Puget's Sound.

The whole country from Lake Superior to the Pacific Ocean is well watered; abounding in small lakes, streams and rivers of pure, fresh water; it is one continuous alternation of forest, open-timber land and prairie.

In Minnesota and Dakota the winters are not severe. The fall of snow west of the Mississippi is comparatively light, while the climate from one end of the road to the other is as conducive to health and long life as any part of the world. Such being the general character of the country, it is safe to conclude that the tide of emigration, turning northwest around the "great central rainless" waste above described, will soon cover the vast arable plateau of Dakota, Montana and British Columbia; and will eventually follow the route of the road across the continent to the shores of the Pacific Ocean.

INDUCEMENTS FOR SETTLERS.

To the people of our populous States and crowded Europe, the country that will be opened to immigration by the building of the Northern Pacific Railroad will afford a splendid opportunity to better their condition in life.

It is well known that the American farmer, with

his ever profitable farm and comfortable home, is the most independent of men. Under a system of government where every one is free to make the most of his fortune in life, all branches of industry thrive; and where the highest places of honor and trust are within the reach of the humblest, individual effort, virtue and merit are rewarded to an extent entirely unknown in the countries of the Old World.

In the manner in which the hundreds of thousands who have settled in the Mississippi Valley within the past thirty years have succeeded, is found full proof of these statements.

The peoples of Northern Europe, the English, Scotch, Irish, Swedes, Germans, Prussians, Danes and Norwegians, are peculiarly adapted to our "great Northwest." Among its forests, on its prairies, in its mountain valleys, by the borders of its lakes, along the banks of its rivers and mill streams, in its mines, or down by its rugged sea coasts, each nationality may find some locality suited to its taste, and where its people may prosper as never before by following their accustomed pursuits.

The first settlers on the route will have the choice of locations, and will buy their lands at the lowest price. While the road is building they will find a ready sale for the products of their labor to the employes of the company. They will also be afforded an opportunity to work for the company in various capacities, thus enabling them to earn money to pay for and stock their farms, and thus make themselves comfortable homes.

SUCCESS OF LAND GRANT RAILROADS.

The Illinois Central Railroad Company was chartered in 1851, and received from the United States a fraction over 3675 acres of land per mile (amounting in the aggregate to 2,595,000 acres for its 706 miles of road), on similar conditions to those contained in the charter of the Northern Pacific Company.

The Illinois Central Company commenced the sale of its lands in 1853. They were sold to actual settlers in small tracts at low prices, and on liberal terms of payment. In this way there was secured on the line of the road, as fast as it was completed (and often in advance of such completion), a sprinkling of energetic pioneers, who soon demonstrated what could be done at clearing and cultivating the lands thus acquired.

The success of the first settlers, and the liberal policy of the company, in time attracted a large immigration to the company's lands, as is shown by the following statement.

The company received from sales of land in the years 1853, '4 and '5, only $476,811 71; while in 1864 alone the sales amounted (including interest on previous sales) to $2,898,980 19. In the eleven years ending Dec. 31, 1864, there had been sold 1,484,416·49 acres, for $17,670,267 34, leaving unsold at that time, 1,111,583 51 acres.

Notwithstanding the low price at which the first sales were made, the advance has been so great that the average price per acre for what have been sold is nearly twelve dollars.

The following extracts from the company's report for the year ending December 31, 1864, give some idea of their land operations. The President says:

"I am pleased to report the promising condition of the land department. There has been an active demand for land. Three thousand five hundred and one purchasers have bought 264,432·05 acres at an average of $10.96 per acre, amounting to $2,898,980 19.

"These sales are widely distributed and in small tracts. In the majority of cases one-fourth of the purchase money has been paid in cash, and the balance is payable annually in advance. The arrears of interest have generally been paid. The policy has been liberal to the party actually settled upon and working the land. Great care has been taken not to dispossess any man making an honest effort to work his farm, and this course has established confidence in the company.

"The property of the company now consists of 706 miles of railway, 105 miles of sidings and double track, 183 engines, and 3,500 cars. The machine shops are well furnished, and the facilities for building locomotives and cars are ample. A very large outlay has been made at Chicago and Cairo for depot and station accommodations. I do not know that the company will require any more land at any of its stations for many years. Two-thirds of the structures on the road are of masonry. The cost of the property stands on the books of the company at fifty thousand dollars per mile; and beside the income from the railway, you will have for many years a large revenue from the land.

"The local traffic on the line for 1864 was much disturbed by the requirements of the government. The forage and other supplies for the armies in the Southwest were taken, to a large extent, from Illinois, and the preference, which the government had a right to demand, prevented the company from doing the private business of the line with regularity, and great dissatisfaction has existed in consequence thereof.

"Although the rolling stock has been largely increased within the past two years, we have not kept pace with the increasing volume of business, and require more motive power. Our expenses are much larger than in previous years.

"From a careful consideration of the possible condition of the traffic—if peace should be restored—I am disposed to believe that there would by a larger amount of business than we have yet had, and with diminished expenses."

The large local traffic of this road is due in no small degree to the wise policy which induced the settlers to locate along the line of its route. The following statement is, in this connection, worthy of consideration:

Cost of the 706 miles of the road and the other property, as stated in the report, is $50,000 per mile, making the whole cost		$35,300,000 00
Ded't 1,484,466 acres sold at $12, is	$17,670,267 34	
1,110,583 acres unsold at $12	13,326,982 12	
		30,997,249 46
Leaving the actual cost of the entire railway and property		$4,002,750 54

As the Illinois company's lands are daily appreciating in value, it may with safety be assumed that that company will eventually realize from its comparatively small land grant (3,675 acres per mile) the entire cost of its present valuable property.

If such has been the result thus far with the Illinois Central, what may not be estimated with regard to the munificent grant to the Northern Pacific, which, in the "States" through which the road is to run, is nearly four times, and in the "Territories" almost seven times as many acres per mile as that granted to the Illinois road?

CONCLUSION.

Nearly all that portion of Illinois through which the Illinois Central Railroad now runs, was as sparsely settled at the time that company was chartered, as that part of Minnesota now is through which the Northern Pacific Road will run. There is vastly less desirable, unoccupied agricultural land in the United States now than there was fifteen years ago. Immigration from Europe is increasing so rapidly that it is even now pushing itself far beyond rail communication in its westward course.

The great rainless plain south of latitude 43° is already reached, and it requires no prophet to foretell where this increasing tide of humanity will next find a resting-place. Minnesota and Dakotah, with British Columbia and its Red River country, and the Great Saskatchawan Valley, can no longer be held by the "red man" and the monopolizing "Hudson Bay Fur Company." The fertile plains of Montana, and the rich mines of iron, coal, copper, lead, silver and gold in the mountains beyond them, cannot lie dormant as they have (for aught we know) since the creation of the world. They must be opened up. They must and will be occupied. The age of progress in which we live demands it; and it will be done. That man is not fifty years old who, in his childhood days, sailed from Buffalo in the first steamboat that navigated our great lakes; neither is that man fifty-five years old who built the first framed house where the city of Chicago now stands. Thirty years ago St. Louis and Chicago were the western limits of civilization on the North American continent. A journey at that time from either of those places to "Fort Snelling," on the Mississippi, or "Council Bluffs," on the Missouri, was considered by far a greater undertaking than to cross the continent to the Pacific Ocean is considered now.

Less than forty years ago there were not twenty miles of railroad in the whole United States. Now we have forty thousand miles in full operation. But little less than twenty years ago Lieutenant Fremont was regarded as one of the greatest explorers of modern times for having found a pathway over the mountains to the Pacific Ocean. Now a daily line of "Concord coaches" makes the trip with as much regularity as was formerly done between Albany and Buffalo. Who shall then say that we do not live in an age of progress? It is, indeed, true, that this our western "world does more!" Let the word but be spoken, that "the Northern Pacific Railroad shall be built," and it will be done.

MAY, 1867.

Since the foregoing was written, the writer has conversed with an intelligent gentleman of Olympia, on Puget's Sound, who made a reconnoissance of the country from Walla-Walla to Helena, in Montana, *via* Pend d'Orielle Lake—Clark's fork of the Columbia River—to a branch of that stream called the "Jocko," and thence up that stream as far as boats can navigate, and so on to Helena overland in an almost due easterly direction. He says: "The country from Walla Walla to Pend d'Orielle Lake is one of the most fertile I have ever traveled over. The distance from the 'Snake' river (Columbia), near Lewiston, to the lake, is about 125 miles. An abundance of timber for building the road, and all other purposes necessary for its operation, can be procured near the line of the railroad for about sixty miles from the river. From that point to the lake there is no lack of timber of the best kind on the immediate line of the road, and such I found to be the case up the river, and from the 'Jocko landing,' the whole distance, some 150 miles, to the 'divide' of the mountains near Helena. The pass at this point in themountains is so gradually approached, and the 'divide' is so low, that it is difficult to know which way the water runs without close examination. In this respect it is not unlike the 'south pass' west of Fort Larimie. The country between the 'Jocko' and the 'pass' in the mountains is not hilly, but is gently rolling. The timber for the whole distance is good; trees, varying from twelve inches to four feet in diameter, with little, if any, undergrowth, are abundant. The United States mail is now carried by this route to the Jocko, the old 'Mullen wagon road' having been abandoned. The soil is good, and produces the very best of grasses in great abundance."

The above notes are added, for it is deemed important to get all the information possible respecting that country.

☞ The Winona and St. Peter Railroad, in Minnesota, which has been running this season as far as Waseca, 106 miles west of Winona, has been completed to Janesville, six miles further West. Twelve miles more will complete it to the St. Peter's river, and this extension will probably be made next spring.

☞ The directors of the Portland and Ogdensburg Railroad have made a location of three more divisions extending from the foot of Sebago Lake to Fryeburg. The directors are now ready to receive proposals for the grading and masonry.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterick (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics.*" State-aid Railroads are distinguished by a "†."

American Railroad Journal.

Saturday, October 23, 1869.

Stock Exchange and Money Market.

Money has been in fair, though not notably urgent, request, since our last, at from 4@7 per cent. on call, and 8@15 per cent. per annum, in the discount form, as the extremes. There has been a rather less liberal supply available within the range, and during the closing days of the week, the tendency of rates has been slightly in favor of lenders. There has been more call from the West and South for currency to be used in moving the various crop products to market. The banks have been enabled to add to their legal tender reserve, to the amount of about 1¼ millions, they report a loss of about 1⅛ millions of specie, and over half a million of deposits. They reduced their loans nearly 2¼ millions. They now hold 20⅛ millions more of gold and legal tender notes than the 25 per cent. of their liabilities for deposits and circulation, called for by the National Banking Act. The U. S. Sub-Treasury now holds a coin balance of 84⅞ millions, and a currency balance of over 6½ millions.

The specie reserve of the city banks according to the latest return is $20,399,070, against $9,186,620 same time last year. The city bank deposits are now $178,642,936, against $188,880,586 week ending Oct. 17, 1868. The legal tender reserve amounts to $53,229,504, against $58,626,857 same time last year. The circulation now stands at $34,217,114, against $24,213,918 same time last year. The loans are now $248,537,984, against $264 644,135 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged about $89,065,044 a day, against a daily average of $104,730,142 the preceding week, and $132,879,962 the week ending with Oct. 2, 1869. The current week's exchanges average abont $100,656,430 a day. The city banks, last week, reported a loss of $1,114,456 of specie, and $571,739 of deposits, with an increase of $1,211,916 of legal tender notes. They reduced their loans, $2,211,990; and increased their circulation, $38,189.

The city bank exchanges on Wednesday were $92,342,057.

National Bank notes to the amount of $11,400 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $218,323,191, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $18,687,306, leaving, with the existing 1,620 banks, (having an aggregate capital of $422,650,260,) an actual circulation at this date, of $299,635,785. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,459,950; and for the public deposits, $19,273 000—making a total of $361,732,950. The Treasury Department last week redeemed and destroyed $226,700 of worn and mutilated fractional currency, and issued $778,700 of new. The outstanding amount of fractional currency on the 1st of Oct., was $33,001 298 50, against $30,711,799 87, on the 1st of September, 1869.

The U. S. Sub-Treasury receipts, week ending with Oct. 16, were $3,999,453 in coin, including $2,564,673 from customs duties, and $5,535,358 in currency; payments, $4,305,184 in coin; including $240,435 of coin interest, and $4,612,527 in currency; balance at the close of the week, $90,796,088, including $83,743,693 of coin, and $6 744,380 of currency, against $91,205,547 at the close of the preceding week, showing a decrease of $509,459. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $610,527 in coin, (including $365,317 from customs,) and $202,128 in currency; payments, $50,726 in coin, (including $35,693 of coin interest,) and $334,985 in currency. On Tuesday, receipts $843,952 in coin, (including $475,162 from customs,) and $3,246,830 in currency; and payments $272,784 in coin, (including $23,364 of coin interest,) and $3,315,823 in currency. The balance at the close of business on Tuesday stood at $91,892,477, (including $6,542,529 of currency, and $84,874,741 of coin,) against $91,240,175 a week previous; and $89,729,337 on Oct. 5, 1869. The aggregate receipts of the office in Sept. were $63,725,058, including $12,504,326 from customs; aggregate payments, $57,424,305, including $4,358,339 of coin interest.

Government revenues have been on a moderate scale, since our last. The excises yielded about 2¾ millions; customs at the port of New York, $2,564,673, and at the outports about $850,000 (in

coin) more, making the grand total income for the week equal to about $7,189,075 in currency. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 55 millions.

The outstanding amount of coin certificates on the 1st of Oct. was $24,412,720, against $23,647,580 on the 1st of Sept. 1869. The Sub-Treasurer at this port, last week, retired $2,428,656 of coin certificates through the receipts for customs.

Gold has been remarkably tame, and steady in price, all through the week, the extremes having been from 130@130⅜, and the closing quotation on Wednesday 130⅛. There has been very little speculative business reported. The customs call has been less urgent. The export drain has been quite moderate; last week it was about a million. Goverment marketed on Tuesday a million of gold to-day, at from 130@130.06. The aggregate of the bids was $3,131,000.

The coin balances of the Government at this port on Wednesday morning, amounted to nearly 84⅞ millions.

The customs of the port on Wednesday yielded $430,000. The U. S. Sub-Treasury disbursed $23,001 of coin interest, on that day.

The customs demand for Gold last week, averaged $512,934 a day; thus far, this week, it has averaged $420,239 a day, or equal to a weekly aggregate of $2,521,434. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $137,391, and since Jan. 1, $14,702,820, against $6,078,842 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $109,039,230, against $97,997,893 same time in 1868. At San Francisco, from Jan. 1, to Oct. 12, 1869, $6,507,000, against $6,560,730 same time last year.

The exports of specie, from this port, last week, were $1,010,513, against $410,313 same week last year; total, since Jan. 1, 1869, $28,393,797, against $66,840,470 same time last year. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $240,435, and since Jan. 1, 1869, $69,783,452, against $63,765,130 same time in 1868. The specie exports from San Francisco, from Jan. 1, to Oct. 12, 1869, were $31,003,560, against $30,150,981 same time in 1868.

The U. S. Treasury receipts from customs at all ports from July 1, to Oct. 16, were about 57¼ millions.

The amount of specie sent east by railroad from San Francisco, thus far, this year, has been $5,056,537.

The following is a semi-official report of the amount of U. S. currency now outstanding:

United States notes old issue		$113,318 50
United States notes new		356,000,000 00
One year 5 per cent. notes	$197,677 00	
Two year 5 per cent. notes	74,352 50	
Two year 5 per cent. coupon notes	40,052 50	
		312,082 00
Compound interest notes		2,752,323 0
Fractional currency		31,870,142 88
Total		$394,134,862 88

Washington advices give the amount and description of the Five-twenty bonds purchased by the Secretary of the Treasury from May 1 to Sept. 30, inclusive, as follows:

When payable.	Registered.	Coupon.	Total.
May 1, 1882..	$6,496,700	$39,500	$6,526,200
Nov. 1, 1884..	705,400	.....	705,400
Nov. 1, 1884..	2,348,600	4,977,600	7,326,200
Nov. 1, 1884..	2,574,900	1,294,100	3,869,000
July 1, 1885..	3,340,000	12,968,350	16,308,450
July 1, 1887..	2,852,350	13,245,900	16,098,250
July 1, 1888..	282,000	1,575,500	1,857,500
Grand total..	$18,590,050	$34,100,950	$52,691,000

Foreign exchange has been held with more confidence, but has not been in particularly urgent request. Bankers' prime sixty day bills on London closed on Wednesday at 109⅛@109⅜, and on Paris to 5.21¼@5.16¼; sight bills on London to 109½@109¾, and on Paris to 5.15¾c.@5.14⅜. The offering of produce bills has been liberal this week. The week's exports of domestic produce have been to the currency value of $4,149,217, making the total since Jan. 1, 1869, $156,125,800, against $132,159,391 same time last year.

Government securities have been in moderate demand, most of the week, and as the offerings of bonds have been on a reduced scale, there has been more firmness noted in price, the market closing, however, less buoyantly. There has been more call for Five-twenties from export buyers, who have been represented as having made freer purchasers than in any preceding week for some time past. On Wednesday, Government bought two millions of U. S. 5-20s at 115.68@115.71 net, out of an aggregate of about 8¼ millions.

U. S. sixes of 1881 closed here on Wednesday at 119¾@119⅞; U. S. Five-twenties of 1862, ex-coupon, 120⅛@120¼; U. S. Five twenties of 1864 at 119⅛@119¼; U. S. Five-twenties of 1865 at 119¼@119½; U. S. Five-twenties of 1865, consolidated, 117¾@117⅞; U. S. Five-twenties of 1867, 117⅞@118; U. S. Five-twenties of 1868, 117¾@118; U. S. Ten-forties at 108⅛@108¼; U. S. Six per cent. currency bonds, 107¾@107⅞.

* Ex Nov. 1, coupons.

Railway and miscellaneous stocks have been more active, and in the main much stronger in price, the New York Central, Hudson and Harlem, and the Lake Shore shares leading off.

General business has shown more animation and firmness in the leading kindness of domestic produce. Middling upland cotton closed, however, less buoyantly on Wednesday at 26½@26¾ cts. per lb. The stock of cotton now here is given at about 15,000 bales. The receipts at the port this week, have averaged about 4,150 bales a day. The receipts at all the ports, thus far in the year commencing with Sept. 1, 1869, have been 271,000 bales, against 196,000 bales in 1868-'9; exports, same time 80,000 bales, against 47,500 bales same time in 1868-'9; stock on hand at latest dates, 127,750 bales, against 109,000 bales same date 1868. The exports of domestic cotton goods from this port, since Jan. 1, have been 18,299 pkgs., against 16,571 pkgs., same time last year. From Boston, 6,489 pkgs., against 7,484 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in less demand, and heavy at from 8@16c., per lb.; week's receipts, 9,619. Milch cows rule dull, at $40@$110 each, receipts, 81. Veal calves in fair request at from 5@13½c. per lb.; receipts, 1,970. Sheep and lambs fairly active at from 4½@7c., and 7@9½c. per lb.; receipts, 35,926. Swine in request at 9@10⅜c. per lb., all live weight; receipts, 18,111.

The week's dry goods imports were valued at $1,319,456, and of general merchandise, $2,418,333, making an aggregate for the week of $3,737,789 specie value, against $5,371,469 same week last year. There has been a rather less satisfactory trade, reported in most kinds of foreign goods, but prices have been generally well supported.

The ocean freight market has shown much more animation and firmness. Room has been less abundant. For Liverpool we quote flour at 2s. 4½d.@2s. 6d. by sail, and 2s. 9d.@3s. by steamer, per bbl.; grain at 8¾d.@9d. by sail, and 9¾d.@10½d. by steamer, per bushel; cotton at $\frac{5}{16}$@⅜d. by sail, and ½@$\frac{5}{8}$d. by steamer, per lb.; and heavy goods 22s. 6d.@35s. by sail, and 30s.@50s. by steamer, per ton. Total number of vessels in port on Wednesday, 394.

The New York exports, exclusive of specie, for the week ending Oct. 19, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$3,351,454	$4,149,217
Prev. reported	128,807,937	151,976,583
Since January 1	$132,159,391	$156,125,800

The imports for the week ending October 16, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,577,323	$1,319,456
Gen. merchandise	3,794,136	2,418,333
Total for the week	$5,371,459	$3,737,789
Previously reported	197,685,206	240,316,760
Since January 1	$203,056,665	$244,054,549

The balance in the Sub-Treasury on Wednesday was $93,026,161 07.

☞ THE BUSINESS OF THE CENTRAL PACIFIC RAILROAD compares with that of the Illinois Central Railroad as follows:

	Miles in operat'n..	Locom's.	Pas. Co's.	Earnings May 1 to Oct. 1.....	Ratio of Op. Exp.	Land's unsold Acres.....
Ill. Cen...	708	170	96	$3,763,136 (cur'y)	64	526,600
Cen. Pac.	690	172	101	2,812,705 (gold) or 3,656,516 (cur'y)	55	7,200,000

Thus, it will be seen the results of the Central Pacific, attained during the first year of its operation, are equally gratifying with those of the Illinois Central Railroad, after twelve years. Their respective obligations are quoted to-day:

Ill. Cen. 7 p. c. cur'y Construction Bonds..119
Cen. Pac. 6 p. c. gold, 1st Mortgage Bonds.. 93½

The two causes, which, in great part, have given the high standing to the securities of the Illinois Central Company, on both sides of the Atlantic—large surplus earnings, with the proceeds of land sales, which together have been invested in their own bonds—are the same which must hereafter give great prominence to those of the CENTRAL PACIFIC. The honorable and judicious management of the Central Pacific Company, together with the great value of their property, entitle their securities to the fullest confidence.

We are prepared to buy and sell the Securities of the Central Pacific Railroad Company at the current market rates.

FISK & HATCH,
Bankers and Dealers in Government Securities.
No. 5 Nassau-st.

☞ PACIFIC RAILWAY GOLD LOAN, $6,500,000. A seven per cent. land grant, railroad, first mortgage bonds, having thirty years to run. Interest and principal payable in gold. Coupons payable semi-annually in London, Frankfort and New York. Circulars, maps and pamphlets sent on application. The bonds for the present are sold in currency at 95, with accrued interest. DABNEY, MORGAN & CO., 53 Exchange Place. M. K. JESUP & COMP'Y, 12 Pine street.

☞ The earnings of the Cincinnati, Indianapolis and Lafayette Railroad for September, 1869, were $205,683, against $178,527, in September, 1868—an increase of $27,156. For the eight months of the year 1869 they have been $1,186,558, against $1,093,458 in 1868—an increase of $93,100.

Macon and Augusta Railroad.

The annual meeting of the stockholders of this company was held at Augusta, Ga., on the 12th inst. In the absence of the President, Benj. Conley, Esq., Hon. John P. King was called to the chair, and J. H. Milligan, Esq., the Secretary and Treasurer of the company, was appointed Secretary of the meeting. The whole number of shares of capital stock of the company is 14,214, of which 8,422 shares were represented. On motion, the meeting proceeded to the consideration of the reports of the officers. The chair stated that there was no report from the President. George H. Hazlehurst, Esq., Chief Engineer, then read the following report:

ENGINEER'S DEPARTMENT, October 4, 1869.

To the President and Directors of the Macon and Augusta Railroad Company:

GENTLEMEN:—The free discussion of the reports made at the late called Convention in May last, is so fresh in the memory of stockholders as to make it unnecessary to dwell at length upon matters connected with my department.

The contract recommended by that Convention was perfected soon after adjournment with Messrs. George G. Hull & Co., and the work has been entered upon with vigor and dispatch.

One thousand hands are now engaged on the grading, masonry, bridging and timber getting on the line of the road.

One cargo of one thousand tons of iron rails were ordered immediately, and is now on its way from Europe, and may be expected to reach the port of Charleston at an early day. So soon as this cargo arrives the track laying will at once be commenced at Milledgeville, and pushed upon the eight miles of graded road bed south of that point.

Active measures are being taken to complete the Ocmulgee River Bridge at Macon at the earliest day, with the purpose of starting track laying at that end of the line.

Under the arrangements made, it appears reasonable to suppose the contracts for completion will be fulfilled in advance of the time stipulated. The character of the work is generally heavy, the country being rugged and broken, involving deep cuts and high embankments.

The amount which has been expended on the grading since the commencement of the contract is some $75,000.

It is gratifying to report the condition of the running portion of the road between Warrenton and Milledgeville to be excellent.

Heavy repairs have been made during the Summer on trestleworks, new timbers having been substituted for all showing the least decay.

The Oconee Bridge has been covered, tinned and painted.

Altogether the road may be considered in first rate condition.

The statement of the earnings as presented by the Georgia Railroad, now operating the finished portion, from April 1st, 1868, for twelve months show receipts for gross earnings of ...$45,123 52

The expenses for the same time were:

Ordinary.....	$39 863 85
Extraordinary (new depts)	7,418 62
Total expense.....	$47,282 47
Excess of all expenses over earnings was.....	$2,158 95

But this statement does not include the interest on the company's first mortgage bonds amounting to $28,000 per annum or seven per cent. on the loan of $400,000, nor officers' salaries, nor contingencies. It will, therefore, be seen that there has been a deficit of $3,000 per month or $36,000 per annum incurred by the year's operations. It was this showing that made it apparent that something should be done, and that quickly, to save the road from ruin, and the stockholders from the loss of every dollar of their investment. The extension of the line to Macon was the sole alternative, and

this fortunately has been secured by the contract with Messrs. George G. Hull & Co.

I feel the utmost confidence that, upon completion of the road to its destination, we shall not only be able to meet the interest on the funded debt of the company, but also pay a small dividend to stockholders. With the natural increase of business and a return of prosperity to the fine farming country traversed by the road, we may rest assured that dividends will constantly increase with the progress of the coming time.

Apart from the profit which, as the shortest line between Augusta and Montgomery we shall derive by the transit of passengers and through mail and express business, I believe that the legitimate business between the two cities of Augusta and Macon, and the local traffic on our line will enable us to meet expenses and the interest on the bonded debt of the company.

Respectfully submitted,
GEO. H. HAZLEHURST,
Chief Engineer.

Mr. J. H. Milligan, Secretary and Treasurer, reported the following condensed statement of the condition of the Macon and Augusta road, October 4, 1869:

ASSETS.

Construction of road	$1,479,005 33
Real estate	16,528 90
Baldwin County bonds	21,000 00
Profit and loss	96,771 85
Interest on bonds	14,315 00
Interest	5,355 38
Incidental expenses and salaries	2,155 49
Due from other corporations and agents	15,007 63
Taxes	30 00
Bills receivable	390 89
Cash	4,116 55
Total	$1,654,676 52

LIABILITIES.

Capital stock paid in	$1,078,878 64
Bonds of the company, first mortgage	400,000 00
Bills payable	11,024 87
Due to other corporations & agents	4,374 67
Forfeited stock	5,610 00
U. S. tax on coupons	5 25
Loss on iron rails seized by the (C. S.)	154,783 09
Total	$1,654,676 52

On motion, the Reports of the Chief Engineer and Treasurer were received and ordered to be printed. The meeting then proceeded to the election of twelve directors to serve for the ensuing year, which resulted in the choice of the following gentlemen: H. F. Russell, W. E. Jackson, John P. King, H. Moore, W. J. McGrath, H. J. Lane, B. B. DeGraffenried, Geo. S. Obear, G. H. Hazlehurst, W. H. Ross, J. T. Gardiner, S. D. Heard.

At a subsequent meeting of the Board of Directors, Geo. H. Hazlehurst, Esq., of Macon, was elected President.

☞ Alex. S. Macrae, of Liverpool, England, oil broker, announces under date of 25th September last, that Maryland and Virginia green lubricating oil, 28° specific gravity, which used to be unsaleable in England at £15 per ton, is now in excessive demand, and market cleared at £30. This figure, taking gold at 137, would be, he writes, equal to $182 per 2,240 lbs.

☞ A movement is in progress for consolidating the Maine Central Railroad, which runs from Danville Junction to Bangor, and the Portland and Kennebec, which runs from Portland to Skowhegan.

Journal of Railroad Law.

RAILROAD COMPANIES—ACTION FOR NEGLIGENCE—UNINCLOSED LANDS.

The facts of the late case of Tarwater *vs.* The Hannibal and St. Joseph Railroad Company (42 Mo., 193,) are fully and clearly stated in the following opinion by

HOLMES, J.—This was a suit under the statute (Gen. Stat., 1865, ch. 63, p. 343.) for damages in killing a horse of the plaintiff which had got on the track of the railroad, and was run over by the locomotive and train, in a part of the road that was not enclosed by a lawful fence, and was not at the crossing of a public highway.

The answer contained no specific denial of the allegations of the petition. It merely alleged that the plaintiff carelessly and negligently turned the animal out upon the unenclosed land adjoining the railroad, and that by means of that act of gross negligence on the part of the plaintiff the animal got upon the track and was run over, whereby the cars were thrown off the track and injured to the amount of $5,000, and that the injury done to said stock was the same injury mentioned in the plaintiff's petition; and the defendant asked judgment against the plaintiff for that sum as damages.

This answer was stricken out, on motion of the plaintiff; and the defendant failing to file any further answer, the plaintiff had judgment by default, which was affirmed on appeal to the Fifth District Court, and the case is now brought by appeal to this Court.

He is not bound to keep his cattle within inclosures. He had a right to allow them to range on the open prairie. It is averred that this was done carelessly and negligently. But whether or not a given state of facts and circumstances amount to negligence, or to any proof of negligence, is a question of law. This averment, therefore, so far as it goes beyond a bare statement of the facts themselves, avers a matter of law only, of which the Court, and not the party himself, must be the judge. (Callahan *vs.* Warne 40 Mo., 136.) It is assumed, as a matter of law, that the facts stated raise a presumption of such negligence as would make the party liable. There is no distinct allegation of such negligence as a main fact, which might be proved by evidence of other facts and circumstances from which it might be inferred by a jury. In the case of the Hannibal and St. Joseph Railroad Company *vs.* Kinney 41 Mo., 271, the petition alleged that the defendant's mules wrongfully, and by reason of the defendant's negligence entered upon the track and caused the damage. The particular facts were not stated. On demurrer, the averment was held to be sufficient. The Court would not undertake to say by what evidence this averment might be sustained on the trial, and it was said that the question, what circumstances would amount to proof of negligence, or would show negligence, would more properly arise when the evidence should be introduced. It was distinctly intimated, also, that if no other evidence of negligence were produced than the mere omission of the party to enclose his cattle, he would not be liable for the damage done to the railroad company by their straying upon the track where no fences were erected. The railroad company may be liable in these cases for unavoidable accidents or simple misadventure, but the owner of cattle, in such case, would not be liable. On the other hand, if a person should wilfully drive his cattle upon a railroad track, another principle would be involved, for no one can charge another with damages which he has wilfully brought upon himself, *volenti non fit injuria.* (Corwin *vs.* N. Y. & Erie R. R. Co., 3 Kernan, 42.) And accordingly the statute has provided that if any person shall ride, lead, or drive any horse or any other animal upon such road, and within such fences and ground, other than a farm crossing, without the consent of the corporation, he shall, for such offense, forfeit and pay a sum not exceeding ten dollars, and shall also pay all damages which shall be sustained thereby on the part of the aggrieved. (Gen. Stat., 1865, ch. 63, § 43.) The same general principle would be applicable if the same thing were done where there were no such fences.

Judgment affirmed. The other judges concur.

Great Western (Ca.) Railway.

The gross traffic receipts of the Great Western Railway of Canada for August, 1869, were $267,384 80; and the working expenses, including renewals, $171,077 53—making the net earnings, $90,307 27. In August, 1868, the earnings were $298,810 53, the expenses, $156,059 81, and the net earnings, $142,751 22. This shows a decrease in earnings of $31,425 73, with an increase in expenses of $15,018 22—making the decrease in net earnings, $16,443 95. The above is subject to loss by the exchange of American currency. Deducting from net earnings interest charges and loss by exchange, the balance applicable to dividend is in August, 1869, $41,928 09, against $34,810 15 in August, 1868, an increase of $7,117 94.

☞ A railroad convention to consider the project of building a road from Kansas City, Mo., to Memphis, Tenn., to be known as the Kansas City, Springfield and Memphis Railroad, was held at Kansas City on the 19th inst. Delegates were present from Tennessee, Arkansas and Missouri. Colonel J. M. Richardson, of Springfield, Mo. was elected President, and R. D. Williams, of Kansas City, Secretary.

☞ The Connecticut Valley Railroad from Hartford to the Shore Line Railroad at West Brook, on the west bank of the river, is to be put under contract directly, and completed by 1870. The length is about fifty miles. The stock subscription already amounts to $1,500,000.

☞ The Memphis, Springfield and Kansas City Railroad Company was organized in Memphis on the 13th inst., by the election of Judge Wm. Byers, of Arkansas, President; Col. J. M. Eldridge, Vice President; F. S. Delvis, of Tennessee, Treasurer.

☞ The rails on the Lebanon and Pinegrove Railroad have been laid from Pinegrove to Jonestown. It is thought that by Christmas the whole line between Lebanon and Pinegrove will be in running order.

☞ The track of the Chicago and St. Paul Railway is to be laid to Hastings, Min., by the 14th of December.

☞ Henry Colony has been elected President, and Thomas E. Hatch, of Keen, N. H., clerk of the Manchester and Keene Railroad Company.

HENRY YOUNG, President. AGENCY OF G. B. HUBBELL, Secretary.

THE UNITED STATES RAILROAD SCREW SPIKE CO.,

No. 45 CLIFF STREET,

Works at OSSINING, Westchester County, N. Y.

To all persons engaged in the construction and management of railroads.

MONTIGNANI'S PATENT.

We respectfully call your attention to the DOUBLE HOOK HEADED SCREW SPIKE for fastening rails and chairs to ties. The above cut represents the size and shape of the Screw. It has been thoroughly tested on several of the most important railroads in the country and in every case it has stood the test in the most admirable manner.

The SCREW SPIKE possesses the following advantages over the common spike.

First. They are made of the best refined iron, the thread being forged (not cut,) refines and toughens them.

Second. The holding power of each SCREW is from four to five tons, and the side pressure, three to four tons.

In three years' experience no SCREW has moved from its place and the rails in every case have been held as firmly to the ties as when first put down. By its use therefore the numerous accidents constantly occurring from loose and broken spikes, and loose and broken rails, and consequent spreading of the track will be obviated.

Third. In order to remove the rails it will only be necessary to reverse the SCREW one quarter, and when replacing it, turn the SCREW back to its original position (the same as turning a button,) when the rail will be held firmly as before. *The ties* will thus be saved from the injury the splits, and the numerous holes made in them by repeatedly drawing out and replacing spikes. By the use of the SCREW therefore the durability of the ties will be greatly increased.

The saving to railway companies in ties alone, it is estimated (by experienced trackmasters) will more than pay the whole cost of the SCREW

Fourth. Where the SCREW is in use in addition to the saving of time in relaying rails, a much less number of men are required to watch the track, and keep it in repair, thereby causing a great saving.

In corroboration of the foregoing, we could present the testimony of many of the most experienced trackmasters and engineers in the country, but deem it only necessary to refer to the following railroad companies selected from more than forty who have used these SPIKES in more or less quantities, viz:

Philadelphia and Reading, Hudson River, Philadelphia, Wilmington and Baltimore, New York and New Haven, Chicago and Rock Island, Fond du Lac and Sheboygan, Albany Bridge Company, Quincy Bridge Company. During the year 1869 The New York and Oswego Midland Railroad Company has used more than four hundred Tons of our Screws. We are now prepared to manufacture these SCREWS in any quantity desired.

We call particular attention to the following mode of putting down our Screw Spikes:

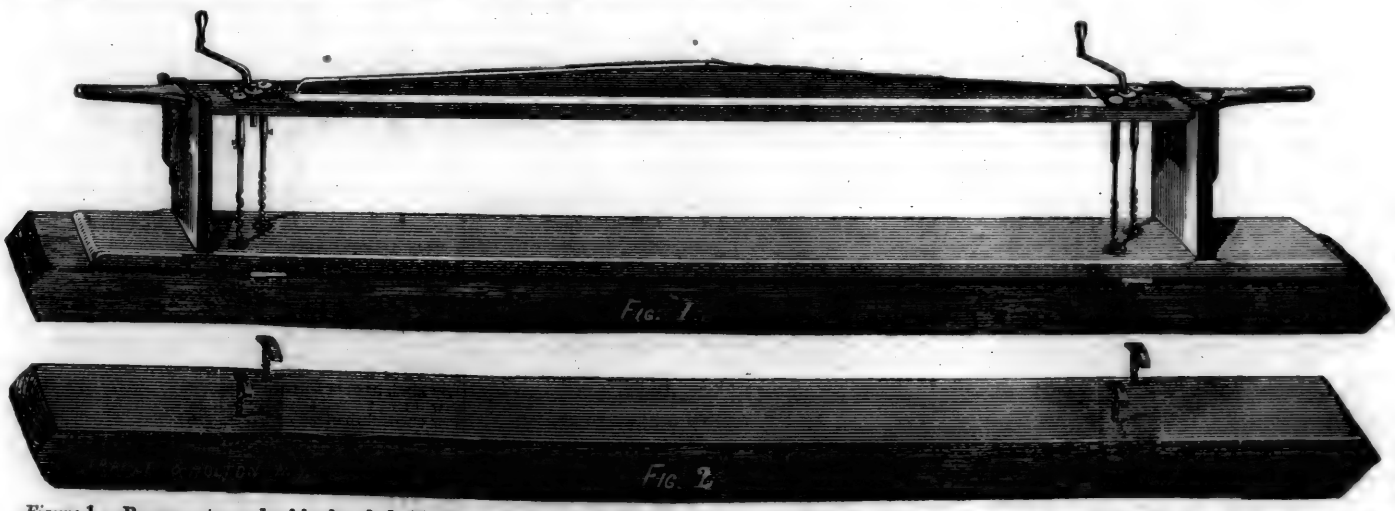

FIG. 1.

FIG. 2.

Figure 1.—Represents a double handed Machine for boring and guaging Railroad Ties which is done with one operation. The Machine is placed upon the Tie, is easily worked by two men, and bores four holes at once, it may also be used by Steam or Water power and in this way the holes for the Screw Spikes are bored very rapidly.

Figure 2.—Represents a Tie with the Screw Spikes set in it, preparatory to placing the same on the road bed. The Screws may be put in the Tie by hand, in the woods, in a Mill, or any other place where a large number of Ties are collected. The Screws will be set to the proper guage for the track and may be so nearly screwed down that it will only be necessary, after the Ties are properly distributed on the Road Bed to drop the Rail in its place and give the Screw a quarter turn, or at most three-quarter turn when the Rail will be firmly fastened to the Tie. The Screws may be turned into the ties with an upright Power Drill such as is used in any machine shop, or, two such machines could be so placed that one could bore the holes while the other was turning in the Screw; such machines can also be so arranged to bore two holes and turn in two Screws at the same time, the Tie can be moved along on a carriage or endless apron.

It will readily be seen that the work of preparing the Ties with the Screws in, may be done under cover, in cold or stormy weather at a time when no work can be done on the Railroad. With Ties thus prepared the Track can be laid in much less time than it can be with common Spikes, thus giving additional proof of the great value of the SCREW SPIKE.

We are now prepared to furnish the double handed Tie boring Machines and hope bye and bye, to be able to publish cuts of improved Screw driving Machines. We also furnish other Tools for putting down the Screws which are used for repairing or replacing Ties.

For further particulars, addres.

G. B. HUBBELL, Secretary, 45 CLIFF STREET, N. Y.

☞ The contract for the construction of the new bridge at the Junction of the Southside and Richmond and Danville Railroads, at Burksport, has been awarded to the Baltimore Bridge Company. They will commence work at once. The bridge is to consist of rolled iron girders, with substantial cross braces of the same character.

☞ The Galveston *News* says that the Galveston, Houston and Great Northern Railroad Company is now ready to negotiate for the construction of the whole line from Galveston to the Red river, where it will meet one of the roads from Kansas.

☞ The Hannibal and Naples Railroad, which connects by an air line the Toledo, Wabash and Western and the Hannibal and St. Joseph, is completed.

☞ The Cleveland and Pittsburg Railroad Company have voted to increase their share capital fifteen per cent. This is to be in the form of a dividend.

☞ The directors of the Lake Shore and Michigan Southern Railway Company elected Mr. James H. Banker treasurer, in the place of Mr. Legrand Lockwood resigned.

☞ The Bangor and Piscataquis Railroad will be completed as far as Dover in a few weeks. The cars are now running daily as far as Milo.

☞ The survey of the George's River Valley Railroad has begun. This road is to connect Warren and Belfast, Me.

☞ The contract for the construction of the railroad from Holton to Woodstock, Vt., has been let.

Beebe's Invention of Rail Fasteners on hand and for Sale.

These fasteners have a jaw and collar to revolve on the neck and under the head of the fasteners, which are made to drive or screw in the tie. The driving fastener has sunken sides within flanges wider at the top than below the middle, forming keys of the brush wood, also barbs on the sides.

FIRST & PRYIBIL'S
PATENT IMPROVED
BAND SAW MACHINE,
452, 454 & 456 Tenth Avenue,
NEW YORK CITY.

This Machine, with the exception of the table, is made entirely of Iron. Its weight is 1800 lbs.; drums 3 feet 3 inches in diameter; height, 8 feet 5 inches; depth 4 feet 3 inches; width 6 feet; driving pulleys usually 14 inches in diameter, or to suit our customers.

Our machine can be run with a speed of 330 to 350 revolutions per minute, causing the saw to travel 3300 to 3500 feet per minute, and with a belt from 4 to 5 inches in width a block of Rosewood from 10 to 15 inches thick, or wood of any kind, hard or soft, can be cut with ease and facility, the saw being from one-quarter inch to one inch in width. A saw one-eighth of an inch in width, including teeth, can be used for cutting wood of considerable thickness.

The saws are not liable to break owing to our improved slide bearing, which adjusts itself according to the expansion and contraction of the saw. No saw will break except by accident or gross carelessness. The same is used principally by railroad car, chair, and other furniture manufacturers, ship, boat, and wagon builders, and also to saw slate, ivory, bone, &c. Guarantee will be given for all we state above. From three to five times as much work can be done with one of our sawing machines, as with an ordinary up and down saw. The work is cut smooth, the saw being retained by an improved guard.

At the present time, Sept. 1869, 64 of our machines are running in this city, and about twice as many in the country.

We also manufacture a lately patented counterbalance oval turning lathe which can be run with more than twice the speed of the old style of lathes, and much more and better work will be done. Many other wood working machines, and also shafting, pulleys, hangers, &c., &c., constantly on hand. Send for Circulars.

Jonathan T. Hobby,
MATHEMATICAL Instrument Maker, Greenwich Street, Hempstead, Long Island N. Y.

NEW YORK CITY STEEL WORKS,

Manufacture every description of Steel—PERFECTLY UNIFORM IN QUALITY—and of very great tensile and compressible strength.

Plates of Cast Steel may be bent COLD to any angle, yet remain capable of being TEMPERED.

Guaranteed EQUAL TO ANY OTHER STEEL manufactured in Europe or the United States.

TOOL STEEL of very superior quality.

LOCOMOTIVE AND CAR SPRING STEEL A SPECIALTY.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

according to location of berth.

These rates include berths, board and all necessaries for the trip.

CHANGE OF SAILING DAYS.

Steamers of the above line leave Pier No. 42 North River foot of Canal street, at 12 o'clock noon,

On 1st and 16th of each Month,

except when those days fall on Sunday, then the day previous.

One hundred pounds baggage free to each adult. Medicine and attendance free.

Oct. 16, ALASKA, Capt. Gray, connecting with GOLDEN CITY, Capt. Lapidge.

Steamer AMERICA, will leave San Francisco Nov. 4, for China and Japan.

NOTICE TO SHIPPERS—Freight for steamer ALASKA, received until 4 P. M. on FRIDAY, October 15. All freight weighing less than 20 pounds to the cubic foot will be forwarded as fast at slow rates. All usual facilities afforded shippers in collecting inland charges, &c.

For freight or passage tickets and all further information apply at the Company's ticket office on the wharf, foot of Canal street. F. R. BABY, Agent.

BURLEIGH'S PATENT
Pneumatic Rock Drill

Is now in successful working operation in New York, Chicago, Jersey City; also at the Hoosac Tunnel (Mass.) Lake Superior, Colorado and Nova Scotia Mines, Union Pacific and Boston and Hartford Railroads; also in deepening the beds of the Illinois and Michigan Canals, and Des Moines Rapids, and numerous other localities.

The Burleigh Drill is adapted to all kinds of rock cutting in open cut Mining, Tunnels, Sewers, Quarries, &c., drilling holes from 1¼ to 6½ inches in diameter. The Drills are worked either by steam or compressed air. For all kinds of work under ground compressed air is used, serving as a perfect ventilator, as it is exhausted from the Drill. At the Hoosac Tunnel the compressed air is carried upwards of a mile and a quarter, and at that distance works eight Drills at the same time. Information in regard to the ownership of the different State rights. Prices of Drills, Air Compressors, &c., can be obtained at the office of

J. T. & W. H. DALY,
43 New street, New York.

New York Saturday, October 30, 1869.

Chicago, Danville and Vincennes Railroad.

This line, now building, was chartered by the Legislature of Illinois in 1865, and when completed, will extend from Chicago to a point on the Wabash River opposite Vincennes, Indiana, *via* Danville and Paris. Its general route is through the Eastern counties of Illinois, adjoining the boundaries of Indiana; opening communication between the City of Chicago and one of the richest and most fertile, though hitherto neglected, districts of the State. In general productiveness, the region through which it passes is not surpassed by any in the West. The soil is richly fertile and well adapted to the growth of wheat and other standard agricultural products, and both coal and iron abound along the line of the road. The Chicago, Danville and Vincennes Railroad Co. propose at present to build and equip that portion of the line extending from Chicago to Danville, and thence in a southeasterly direction to the Indiana line, where it will connect with the Evansville, Terre Haute and Chicago R. R.—the length of the line being about 140 miles. The topography of the country traversed is very favorable to the construction of a road, there being no grade to overcome exceeding twenty feet to the mile for trains bound north, and forty feet for those going in the opposite direction. On its completion there will be an unbroken line from Chicago to the Ohio River at Evansville, forming a route eighty-five miles shorter than that by way of the Illinois Central road to Cairo. From Evansville there will soon be direct railroad communication with Nashville, Tenn., and indidirectly, with all the districts embraced within the limits of the railroad system of the Southwest, thus opening a new route from Nashville to Chicago and the lakes, *via* the Chicago, Danville and Vincennes road, shorter and more direct than any now existing between these two important points. The estimated cost of building this line from Chicago to Vincennes, 140 miles, is about four and one-half million dollars; and in order to determine what elements the road possesses to warrant the belief that it will be remunerative to the company, a few general facts may be stated respecting the sources from which its business will be derived.

The route of the line is through four of the principal Eastern counties of Illinois, viz., Will, Kankakee, Iroquous and Vermillion, of which the aggregate annual production of wheat, corn and other grains is about 10,300,000 bushels. From these counties alone, not including the business derived from the counties of Western Indiana, tributary to the road, the earnings from freights to Chicago, including coal, are estimated at $1,074,343 34; and on freights from Chicago, estimated from the annual statements of other roads leading from that city, at $1,571,015 76. Add for passenger traffic, $628,406 30, and the gross earnings cannot fall below $2,199,422 06. Estimating the operating expenses of the 140 miles of road at 66⅔ per cent, the net earnings would be $733,140 68. These estimates, except as to coal tonnage, are based on the present productions of the counties tributary to the road. No allowance is made for miscellaneous freights, nor for business from connecting lines, nor is there any estimate made for through business; but as it forms a portion of the shortest route from Chicago to the Ohio River and the South, the through traffic in that direction must prove extensive and profitable as soon as the line is completed.

The coal and iron deposits of the country traversed by this road are of immense extent and value. More than one-third of the 140 miles now building passes through coal fields equal to any in the West, being peculiarly well adapted to the manufacture of iron. The upper veins of coal in this district lie within 60 feet of the surface, are about 8 feet in thickness and easily worked. Underlying them are inexhaustible deposits of iron, yielding over forty per cent. of superior metal. A few miles south of these deposits are found the celebrated Brazil coal fields, which furnish a quality of coal for iron manufacture superior to that of the Pittsburg region in Pennsylvania. The annual consumption of coal in Chicago alone is now about 600,000 tons, and the demand is rapidly increasing. What amount of tonnage for transportation over this company's road will be furnished from the Brazil mines, and the mines of coal and iron in Vermillion County, and at other points on the line, it is impossible to determine; but a very low estimate will be 25 car loads (250 tons) per day, with an average haul of the length of the road—140 miles—say 313 working days, 250 tons per day, 78,250 tons per annum, at two cents per mile per ton, would produce $219,100. It is believed that the traffic of the company in coal will be very extensive, and that it will increase in a ratio proportionate to the growth of Chicago and the development of its manufacturing interests.

The progress of the work of building and equipping this road has been rapid and satisfactory—the line having been already completed to Momence, 55 miles from Chicago, and opened for business on the 10th of the present month. Local subscriptions have been obtained along the line to an extent more than sufficient to pay for the right of way, grading, bridging, culverts, and other work of similar character for the entire road. The right of way has been obtained, and contracts have been entered into with experienced and responsible parties for the construction of the whole work. Means are also provided for the ties for this section of the line, and for a portion of the iron.

In order to provide the means for the remainder of the construction and equipment, the company has executed a mortgage upon its road, property and franchises, to Wm. R. Fosdick and James D. Fish, of New York, Trustees, to secure an issue of $2,500,000 of 7-40 first mortgage sinking fund bonds, with interest payable semi-annually in gold. These bonds are now in the market, and as an investment for capital they are among the

best offered to the public. The entire issue will be less than $18,000 per mile, and besides being a mortgage on the road, are secured by a sinking fund to be set aside for their redemption at maturity from the net earnings of the company. In order to secure the bondholders against any fraudulent issues of surplus bonds, a system of registration has been adopted, such as should be required of all railroad companies by law, by which the purchaser or holder of a bond may at any time know the exact amount of bonds issued and by whom they are held. Every guaranty of security and honest dealing is offered by the company, and the fact that 55 miles have already been built and equipped from the capital stock without any previous issue of bonds, shows they have undertaken the work in earnest. The officers of the company are: Prest., W. D. Judson, of N. Y.; Treasurer, Amos Tenny, of N. Y.; Secretary, F. E. Jones, of Chicago; Chief Engineer, Z. F. Summers, of Chicago.

Cincinnati, Hamilton and Dayton Railroad.

The earnings of this road for the years ending March 31, 1868 and 1869, were as follows:

	1868.	1869.
From passengers	$476,797 63	$437,626 75
" freight	727,275 84	696,691 52

Balance—surplus account, March 31, 1869	303,602 69	
Total, as above	$675,678 00	

Compared with the previous year, the gross earnings show a decrease of $123,790 17, with a decrease in operating expenses of $44,645 34. The entire expenditures, including interest, taxes, etc., was $942,274 16, against $974,435 60 in 1868—a decrease of $32,161 44. The net earnings show a decrease of $91,628 73. The earnings per mile have been $20,151 84. Number of passengers carried, 642,583. Tons of freight moved, 508,692. Number of miles run by trains, 475,805. The operating expenses were 58.23 per cent. of gross earnings. The report says:

The floating debt of the company has not been reduced as much as was hoped for and desired. The large amount expended on the Dayton and Michigan and Cincinnati, Richmond and Chicago roads in permanent improvements and extensions, made necessary by the increasing business on the former, and for the renewal of bridges, on the latter, which were carried away by one of the greatest floods known in the Seven Mile Valley, has required a large portion of the net earnings of this company. As there remains no present necessity for further expenditures, to any considerable extent, on these roads, the entire net income of the three roads will be applied this year to the liquidation of the remainder of the floating debt of the Cincinnati, Hamilton and Dayton Co.

During the past year two dividends, of five per cent. each, have been made, free of Government tax, and were paid in Dayton and Michigan bonds, received by this company for advances made for permanent improvements and construction on that road.

The lease of the company's road and property, proposed to be made to the Erie Railway Company, approved by the stockholders at their meeting held on the 18th of February last, was not carried into effect, for reasons arising subsequent to that action, which have become generally known, and need not be here repeated. The failure to execute this lease, and subsequent disagreement as to the terms of division of the rate upon through traffic, for a time interrupted the business of the company and the Erie and the Atlantic and Great Western Railway Companies. Our business relations, however, with these companies, have been since restored by the execution of a contract which took effect on the 1st day of May, a copy of which is submitted with this report. Its chief features are, that, for an annual sum of one hundred and eighty thousand dollars, payable in equal monthly instalments, we grant to the Erie Railway Company, for ten years, the exclusive privilege of our broad gauge track, and a portion of our depot facilities, for their business in connection with our road, reserving our local business, but withdrawing from competition for New York traffic; and that, to avoid confusion and unnecessary expense to both parties, this company is to move their trains and cars, and handle such of the freights of the Erie Company as they shall require, on their account and at their expense, the cost of which service, including the cost of furnishing motive power, a fair proportion of the compensation of station agents and clerk hire and of the salary of a joint Superintendent, and other necessary expenses connected with the business, is to be determined in proportion to the comparative wheelage of the two parties, and paid monthly.

It is believed that this arrangement will prove satisfactory to both companies. It secures to the Erie Company an independent control of its own business, and connection with Cincinnati and the Southwest, and to this company a fixed and definite equivalent for the concession by which this is secured. It avoids the complication and danger arising from the operation of one road by two independent companies, each having a large amount of business, and economises the cost to both.

An arrangement has also been made with the Cincinnati, Sandusky and Cleveland Company, by which our road still continues to receive the full local business of that road, we giving in return the business of the Cincinnati, Hamilton and Dayton to all local points on the Cincinnati, Sandusky and Cleveland road, and uniting with them in a through Eastern all rail business. With a view of avoiding an injurious competition between the Dayton and Michigan and the Cincinnati, Sandusky and Cleveland roads, it has been agreed that the business of the Cincinnati, Hamilton and Dayton road shall be sent by the Cincinnati, Sandusky and Cleveland road to and from all places to which the said road, in connection with the Cincinnati, Hamilton and Dayton, forms the whole or part of the shortest all rail railroad line. On the other hand it is agreed that all traffic west of the Sandusky road, including Detroit and Canada, shall not be competed for by the Cincinnati, Sandusky and Cleveland Co., as against the Dayton and Michigan.

This contract harmonizes with that made with the Erie Company, and continues to our road the valuable local business of the Cincinnati, Sandusky and Cleveland Railroad.

During the year ending March 31, 1869, 1,290½ tons of rail, 18,866 cross ties, 37,201 spikes, 7,996 lbs. cast iron chairs, and 101,504 lbs. splice plates and bolts were used, 500 tons of rail, new iron, were purchased at a cost of $38,000, and 107 tons of Bessemer steel rail at a cost of $15,509 18, the balance of 683½ tons being re-rolled iron.

The company have purchased the right to use "Miller's Patent Platform, Coupler and Buffer," and have placed them on 26 passenger and baggage cars.

The current assets and liabilities of the company are as follows:

Assets:	
Materials for repairs	$198,090 03

	$1,276,720 37

The receipts from operations of the Dayton and Michigan Railroad during the year were $1,050,962 22; and the expenditures, $1,301,671 54—an excess of expenditures over receipts of $250,709 32. To which add balance due from previous year ($397,164 64,) and old account D. & M. R. R. ($19,274 53,) making a total of $667,148 49. Deduct for 700 3d mortgage bonds, $560,000, leaving balance due C., H. & D. R. R. Co., March 31, 1869, $107,148 49.

The receipts from operations of the Cincinnati, Richmond and Chicago Railroad were $104,928 42; and the expenditures, $151,432 26—an excess of expenditures over receipts of $46,503 84. To which add balance due March 31, 1868, $13,226 29—making a total of $59,730 13. For this amount the C., H. & D. R. R. Co., have received 65 2d mortgage bonds in full payment.

Balance due Lessees March 31, 1869		$107,148 49

The balance of the First Mortgage Bonds (recently the second) of which there was $229,000 held by the lessees as per last report to pay the indebtedness to them for redemption of first mortgage bonds due July 1, 1867, have been disposed of and the amount realized therefor ($194,818 33) has been applied for that purpose, leaving a balance of $38,717 52, which has been carried to this year's account. Two of the bonds Nos. 22 and 23 have not been presented for payment, and as there has been no interest paid on them since 1859, the probabilities are they have been lost. During the year 35 first mortgage bonds have been cancelled by the sinking fund making an increase as shown been on the balance sheet of $194,000.

A mortgage of $700,000, has been recently placed on the property of the company, to Stanley Matthews, trustee, and bonds issued for that amount in sums of $1,000 each, bearing interest at 7 per cent. per annum, and payable October 1, 1888. These bonds have been paid to the lessees at 80 cents on the dollar, in part payment of amount due them, leaving a balance still due of $107,148 49, and the discount on these bonds has charged to profit and loss account.

Ass't Superintendent.—Lewis Williams.

North Carolina Railroad.

The Raleigh *Sentinel* says that "the North Carolina Railroad Company have let and farmed out their road, for the term of twenty years, to the Raleigh and Gaston Railroad Company and others, for an annual rent of $240,000, to be paid on the first day of January in each year. The same paper adds: "The rent is secured by a deposit in bank of cash or its equivalent in United States bonds; or good and acceptable railroad or other bonds; this deposit is to be permanent, and if there is occasion to apply it, then it is to be renewed, and as often as necessary. This is an important transaction, and it would seem to be a beneficial one for the stockholders of the company. $240,000 is six per cent. on the whole capital stock. The stock has been worth about twenty-five cents in the dollar; this lease will probably run it up. The lessees, as we learn, are entirely responsible. Indeed, the Raleigh and Gaston Railroad Company, itself, is able to discharge such an undertaking."

Southern Maryland Railroad.

At a public meeting in Oakville district, on Saturday last, the announcement was made by Mr. Maddox that a million of the stock of the Southern Maryland Railroad had been subscribed, and that the two per cent. bonus on this amount had already been paid in as required by law. Mr. Maddox, we learn, accompanied this statement with the declaration that he was just from a meeting of the corporators at Charlotte Hall, and had been authorized by them to make this announcement to the public. Mr. Maddox in the morning presented us a paper signed by Colonel John D. Bowling, of Prince George's, Major Gardiner, of Charles, and other gentlemen well known to us, and there it was in black and white, over the signatures of those gentlemen: First, that a million of the stock of the Southern Maryland Railroad had been subscribed; and, secondly, that the two per cent. bonus, ($20,000,) as required by law on this amount, had already been paid in.—*St. Mary's Beacon, Oct.* 21.

☞ A stock exchange has been organized in Chicago. It will be opened for business about the first proximo. The officers are D. H. Denter, President; Christian Wahl, Vice President; J. J. Richards, Secretary, and James E. Taylor, Treasurer.

Our Foreign Trade.

Western Maryland Railroad.

The annual meeting of the stockholders of this company was held in Baltimore on the 19th inst. The meeting was organized by calling John K. Longwell, of Carroll County, to the chair, and appointing Daniel W. Moore, Secretary. Wendell Bollman, Esq., President, presented his annual report, showing the condition of the road and its working for the past year. But little work in the extension of the road was done for want of funds, the injunction against the city of Baltimore having prevented the company from coming into possession of funds for that purpose. The annual election then took place, when the following directors were elected: John K. Longwell and George W. Harris, of Carroll; Joshua Biggs, of Frederick, and John Welty and Isaac Molter, of Washington County. A meeting of the directors was subsequently called, when Wendell Bollman, Esq., was re-elected President. The road is represented as being at present in good working condition from Baltimore to Double Pipe Creek.

New York, Providence and Boston R. R.

The receipts of this company for the year ending August 31, 1869, were as follows:

From passengers		$368,633 73

		214,447 42
Surplus		$21,010 79

Compared with the previous year, the gross receipts show an increase of $235,723 13, with an increase in expenses of $102,712 38—making the increase of net earnings, $133,010 75. The report says:

By an agreement entered into in April last, between the Stonington and Fall River Lines, the Bristol Line, so called, was discontinued, and the Boats of the Narragansett Steamship Company were transferred from Bristol to Fall River, thus throwing the entire influence of the Boston and Providence Road in our favor, and placing our through connection on its former favorable footing. To effect this agreement, it was necessary to pay the Providence, Warren and Bristol Road for the abrogation of its contract with the Narragansett Steamship Company. The proportion paid by this company was $4,659 38, a portion of which we shall probably get back.

The boats of the Stonington Steamboat Company have performed their trips with remarkable regularity, and, it is believed, have steadily gained in favor with the traveling public and shippers of freight. Your investment in that company has thus far proved valuable, directly and indirectly, with a promise of still better success in the future.

The rate of fare, between New York and Boston, has been steadily maintained at $5 throughout the year.

To preserve the road in its usual good condition, and to adapt it to the increased business, a large outlay has been necessary for repairs, improvements, and additions to rolling stock. 32,703 new ties, and 996 1-2 tons new rails, have been laid—the latter with the fish-bar fastening; 89 tons iron have been rerolled, and 7,331 rails repaired at the Company's shop. The track is now in fair running order; but more new rails, with the improved fastening, are required, and it is believed to be good policy to substitute them for the old fashioned and nearly-worn-out rails, as fast as practicable. The truss and pile bridges have had extensive repairs, and much has been done towards filling them in. In consequence of the rapid decay of the piling and timber, it will be necessary to push this work with vigor, for some time to come.

In the company's shop, one eight-wheel passenger car, one eight-wheel baggage car, three eight-wheel platform cars, two four-wheel platform cars, and one derrick car, have been built, and three passenger cars rebuilt with Monitor roofs. The company have also paid their proportion of four new passenger cars for the Shore Line Express Train, and have bought the four cars replaced by these, which are well adapted to our local business. We have also bought one new first-class locomotive, and fifteen new freight cars. Six more platform cars are needed, and will soon be procured.

Station houses, buildings, and platforms, have had extensive repairs; but there is still much to be done in that direction.

The number of miles run by locomotives during the year is 338,201, at a cost for fuel of 13.85 cents per mile.

The valuation of stock and material on hand, including fuel, is $102,987 35.

Acting under proper authority, the directors, in November last, directed the issue of $1,000,000 in 7 per cent. bonds, payable in 1899. Of this amount, $400,000 was offered for sale, and $383,000 disposed of, and the proceeds applied to the payment of the floating debt. In addition, $56,000 of the old 6 per cent. bonds have been exchanged for the new issue, and the balance remains in the hands of the Treasurer.

Of the outstanding claims against the former Treasurer, I. H. Palmer, and the Stonington Bank, amounting to $85,683 48, there has been realized $32,445 60. The matter is now in the hands of the counsel for the corporation for final settlement, and it is expected a large part of the balance will be collected.

The suit against the Merchants' Navigation and Transportation Company, of Boston, which you were informed in previous reports had been commenced, came to trial, before the Supreme Court at New London, in January last. The result was a verdict in our favor for $66,666 67, from which the defendants appealed, and moved for a new trial, which motion is not yet decided. It is not believed that a new trial, should one be granted, will result unfavorably to our claim for damages.

The expected completion, during the coming winter, of the Shore Line Bridge, at Connecticut River, is a matter of much interest and importance, presenting, as it does, an opportunity for largely increasing our through business, *via* Shore Line and New Haven Roads. With a ferry boat at New London sufficiently large to accommodate the through travel, and proper arrangements for giving passengers a good dinner, there seems to be no reasonable doubt that this route, with less dust in summer, and less snow in winter, will attract a large share of travel from the northern route.

In this connection it is proper to state, that the time is rapidly approaching—in fact, has already arrived—when a double track over at least a portion of your road, has become a necessity, and it is now recommended that authority be conferred on the directors to commence laying the second track whenever, in their opinion, it shall be judicious to do so.

The assets of the company are as follows:

Amount due from the late Treasurer and in Stonington Bank	$53,237 83
Due from post office department	2,018 75
Bills receivable	2,000 00
Bonds	20,000 00
A. S. Matthews, Superintendent	11,907 52
Due from connecting roads	23,607 52
	$112,771 62

The number of passengers carried over the road the past two years is as follows:

	1868.	1869.
Through passengers	136,065	130,983
Local "	286,978	307,056
Commuters	42,376	50,028

The amount of freight transported over the road the past two years is as follows:

	1868. Tons.	1869. Tons.
Through freight	47,513	124,815
Local "	38,859	40,465

☞ The work on the Fort Wayne, Muncie and Cincinnati Railroad is steadily progressing southwork from Fort Wayne. It is expected that the entire line will be opened between Fort Wayne and Cincinnati by the 1st of November.

U. S. Railroad Clerks' Mutual Insurance Association.

A meeting of delegates from various railroad companies throughout the United States was recently held in Philadelphia, in pursuance of a call made by R. D. Keen, of the Camden and Amboy Railroad, for the purpose of forming a Railroad Clerks' Mutual Insurance Association.

The meeting was organized by the election of R. D. Keen, Chairman, and Mr. James P. Foster, of Pittsburg, Secretary.

The following delegates were present: L. B. Blydenburg, Camden and Atlantic Railroad; R. D. Keen, Camden and Amboy Railroad; Joseph Barnes, Camden and Amboy Railroad; L. M. Babcock, Erie and Pittsburg Railroad; Q. Letroubridge, Philadelphia and Erie Railroad; Wm. H. Cantline, Camden and Atlantic Railroad; J. S. Hackett and M. Mills, West Jersey Railroad; Jno. Dougherty, Jos. S. Jenkins, David McKnight, Joseph S. Milligan, Lewis W. Young and Wm. S. Paddock, Pennsylvania Railroad; John S. Mischamp, Camden and Atlantic Railroad; F. A. Anten, Philadelphia and Trenton Railroad; E. L. Thompson, C. & A. R. R.; W. Maull, Erie Railway Company; Wm. L. Cromlish and John G. Neil, Pittsburg; C. C. Fisher and James P. Foster, Pittsburg, Cincinnati and St. Louis Railroad; James P. Kerr, Northern Central.

The Chairman briefly stated the object of the Convention, when, on motion of Mr. Babcock, it was resolved that all present should be considered delegates.

A committee was appointed on Constitution and By-laws, consisting of Messrs. Babcock, Fisher and Keen. The meeting then took a recess.

At the hour fixed the Convention reassembled.

The Committee on Constitution and By-laws, through its Chairman, Mr. R. D. Keene, reported that the organization shall be known as the Railroad Office Clerks' Mutual Life Insurance Association of the United States. Its officers to consist of a President, Vice President, Executive Committee of Five, and Grand Secretary and Treasurer, who shall give bonds for the faithful performance of his duties.

The officers to be elected for one year, and the meetings of the Association to be annual; the delegates thereto to consist of one from each road or division belonging to the Association. In case of the death of any member, the widow to receive the premium due; if no widow is left, then the heirs to receive the amount, and in default of heirs the funeral expenses to be paid. In the case of a member being totally disabled, the same premium to be raised by the Executive Committee by assessment, as in the case of death, and paid to such member.

The report was adopted.

An election for permanent officers for the ensuing year resulted as follows:

President, John G. Neil; Vice President, L. M. Babcock; Grand Secretary and Treasurer; R. D. Keene; Executive Committee, O. A. Trowbridge, D. McKnight, James P. Kerr, L. B. Blydenburg, C. C. Fisher.

The Convention then adjourned to meet at Chicago on the second Tuesday of April next.

☞ Two sections of the Portland and Ogdensburg Railroad, in Vermont, are located and now ready for contract; from St. Johnsbury to the Lamoille River, in Hardwick, on the eastern end of the line, and from Swanton to the Lamoille River, in Cambridge on the western end, leaving only 25 or 30 miles of the road to locate between the two points.

Railroads through the Indian Territory.

The following is a copy of the joint resolutions of the Chicasaw Legislature, relative to railroads passing through their Nation, approved September 17, 1869:

Whereas, Under the treaty made at Washington, 1866, the Choctaws and Chicasaws granted a right of way through their lands to any companies which shall be authorized by Congress, or the Legislatures of said Nations, respectively, and which shall, with the express consent and approbation of the Secretary of the Interior, undertake to construct a railroad through the Choctaw and Chickasaw Nations; and,

Whereas, It is also provided in said treaty, that the Nation through which the roads aforesaid shall pass, may subscribe to the stock of the particular company or companies such amounts as they may be able to pay for in alternate sections of unoccupied lands for a space of six miles on each side of said roads, at a price per acre to be agreed upon between the Choctaw and Chickasaw Nations and the said companies, subject to the approval of the President of the United States; therefore,

Be it resolved by the Chickasaw Legislature, That while the Legislature fully appreciates the necessity of railroad connections through the Choctaw and Chickasaw country, between railroads being built outside thereof, and the great benefits such connections will confer by developing the resources of the country, and furnishing cheap and rapid transportation for the surplus productions thereof; and by facilitating communication, social intercourse, and trade between the Choctaw and Chickasaw people and the citizens of the United States, it is considered premature and impolitic at present, to entertain any propositions for the charter, or for subscriptions payable in land to the capital stock of any company, and that no steps should be taken in that connection, *until* such companies as propose to build railroads through the Choctaw and Chickasaw county *shall have been authorized by Congress* to construct and operate said road or roads, with the express consent and approbation of the Secretary of the Interior, and shall give unmistakable evidence of the *intention and ability to construct* and operate such road or roads.

Resolved further, That it is the opinion of the Legislature that the Choctaws and Chickasaws ought to entertain such propositions only for building and operating railroads through their country emanating from corporations chartered outside thereof, as come from such, *as shall first reach the lines* of the Indian Territory, either on the north, east or south.

Resolved further, That the Governor of this nation be requested to forward a copy of these resolutions to the Commissioner of Indian affairs.

Approved Sept. 17, 1869.

C. HARRIS, Governor.

New York, Housatonic and Northern R. R.

Some time ago this company selected their route through the village of Danbury, Connecticut, and the selection was approved by the Connecticut Railroad Commissioners. The company constructed and put in operation the northern portion of their road, between Brookfield and Danbury, but have, during the past year, done no work upon the line beyond Danbury. The Boston, Hartford and Erie managers were desirous of using the same line, but could make no satisfactory arrangement with the former company, who demanded, it is said, $100,000 for the privilege of laying down a track over their line. The Railroad Commissioners being appealed to, decided that the New York, Housatonic and Northern Company had forfeited the right to their line by failing to construct a road upon it; and the right was given gratuitously to the Boston, Hartford and Erie Company.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterisk* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "†."

Years ending.	Railroad: Main Line.	Railroad: Branch Lins.	Railroad: 2d Track and Sidings.	Railroad: Railroad in progress.	Rolling Stock: Cars: Engines.	Rolling Stock: Cars: Pass.	Rolling Stock: Cars: R. M. E.	Rolling Stock: Cars: Freight.	Companies.	Abstract of General Balance Sheet: Property and Assets: Railroad.	Property and Assets: Rolling Stock. RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, October 30, 1869.

Stock Exchange and Money Market.

Money has been in quite liberal supply all the week. The balances available through private channels have been on the increase. The banks have been free of accommodation, partioularly to the leading street borrowers. The demand for aid has been moderately active within a range of from 5@7 per cent. on call, and 8@12 per cent per annum, for strictly prime to good houses, in the discount line. The drain of currency, to move produce to the seaboard has been less extensive. The South has been the main source of inquiry for funds, for this purpose. Speculation has been comparatively spiritless at the Stock and Gold Boards and has called for the employment of smaller amounts of money than usual at this season. The Gold Board has been remarkably dull, and the dealings there have shown a weak and irregular market. The city banks enlarged their loan and discount averages, last week, $857,089, while they reported a reduction of nearly 2⅞ millions in their deposits, 1⅛ millions of legal tender notes, and nearly a million of specie. The U. S. Sub-Treasury closed the week with an increased cash reserve. On Tuesday, under instructions from Washington, the Assistant Treasurer commenced disbursing the November coin interest on the public debt. On that day and the next, the disbursements on this account exceeded 3½ millions. The Sub-Treasurer made further sales of Gold, last week, and purchases of bonds on Tuesday of the current week.

The specie reserve of the city banks according to the latest return is $19,399,701, against $9,553,583 same time last year. The city bank deposits are now $175,798,919, against $186,052,847 week ending Oct. 24, 1868. The legal tender reserve amounts to $52,037,604, against $56,711,434 same time last year. The circulation now stands at $34,204,435, against $24,193,938 same time last year. The loans are now $249,395,073, against $23,579,133 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged about $96,918,377 a day, against a daily average of $89,065,044 the preceding week, and $104,730,142 the week ending with Oct. 9, 1869. The current week's exchanges average about $96,428,845 a day. The city banks, last week, reported a loss of $999,369 of specie, $2,844,017 of deposits, and $1,191,900 of legal tender notes. They increased their loans, $857,089; and reduced their circulation, $12,679.

The city bank exchanges on Wednesday were $80,772,241.

National Bank notes to the amount of $146,040 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $318,487,231, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $18,754,486, leaving, with the existing 1,620 banks, (having an aggregate capital of $422,659,260,) an actual circulation at this date, of $299,732,745. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,459,950; and for the public deposits, $19,273 000—making a total of $361,732,950. The Treasury Department last week redeemed and destroyed $419,200 of worn and mutilated fractional currency, and issued $1,432,970 of new. The outstanding amount of fractional currency on the 1st of Oct., was $33,001,298 50, against $30,711,799 87, on the 1st of September, 1869.

The U. S. Sub-Treasury receipts, week ending with Oct. 23, were $4,184,928 in coin, including $2,499,000 from customs duties, and $7,202,698 in currency; payments, $3,412,021 in coin,(including $3,412,021 of coin interest,) and $8,481,706 in currency; balance at the close of the week, $91,766,639, (including $84,516,599 of coin, and $5,465,372 of currency,) against $90,796,088 at the close of the preceding week, showing an increase of $970,551. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $718,545 in coin, (including $429,241 from customs,) and $524,029 in currency; payments,$229,882 in coin, (including $52,839 of coin interest,) and $636,364 in currency. On Tuesday, receipts $631,628 in coin, (including $365,571 from customs,) and $297,418 in currency; and payments $1,167,201 in coin, (including $1,639,577 of coin interest,) and $516,234 in currency. The balance at the close of business on Tuesday stood at $91,209,913, (including $5,314,220 of currency, and $83,955,690 of coin,) against

$91,892,477 a week previous; and $89,729,337 on Oct. 12, 1869. The aggregate receipts of the office in Sept. were $63,725,058, including $12,504,826 from customs; aggregate payments, $57,424,305, including $4,358,339 of coin interest.

The outstanding amount of coin certificates on the 1st of Oct. was $24,412,720, against $23,647,580 on the 1st of Sept. 1869. The Sub-Treasurer at this port, last week, retired $2,237,385 of coin certificates through the receipts for customs.

Government revenues have been yielding moderately since our last. The excises yielded about 3½ millions; customs at the port of New York, $2,499,000, and at the outports about $825,000 (in coin) more, making the grand total income for the week equal to about $7,821,200 in currency. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 58 millions.

The cost of collecting the internal revenue for the past six months has been reduced from $5,149,629 79 for the same period in 1868, to $4,350,243 79 in 1869, or a total reduction of $799,385 92—a saving of 15⅛ per cent.

Gold has been rather moderately dealt in, through the week, opening at advancing figures, but closing weak, influenced by the announcement of the anticipatory payment of the November interest on the public debt, which payment was begun on Tuesday, and continued on an enlarged scale on Wednesday. The two days' disbursements, on the interest account, were about 3½ millions. The range of the price during the week was from 130@131¾, and the closing quotation on Wednesday was 130⅛. The customs call has been quite moderate. The exports of specie, last week, were only $170,238. On Tuesday, of this week the shipments were $94,000; and on Wednesday, $486,000. The *Arizona* delivered here at the beginning of the current week $29,700 of California gold.

The coin balances of the Government at this port on Wednesday morning, amounted to nearly 84 millions.

The customs of the port on Wednesday yielded $426,323. The U. S. Sub-Treasury disbursed $2,132,641 of coin interest, on that day.

The customs demand for Gold last week, averaged $416,500 a day; thus far, this week, it has averaged $397,406 a day, or equal to a weekly aggregate of $2,384,436. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $55,166, and since Jan. 1, $14,737,936, against $6,087,029 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $111,534,527, against $100,288,205 same time in 1868. At San Francisco, from Jan. 1, to Oct. 16, 1869, $6,722,126, against $6,857,505 same time last year.

The exports of specie, from this port, last week, were $170,238, against $29,724 same week last year; total, since Jan. 1, 1869, $28,564,235, against $68,870,194 same time last year. Government disbursed last week through the U. S. Sub Treasury here, on account of the coin interest on the public debt $192,202, and since Jan. 1, 1869, $69,975,654, against $43,431,724 same time in 1868. The specie exports from San Francisco, from Jan. 1, to Oct. 16, 1869, were $31,681,712, against $29,827,173 same time in 1868.

The U. S. Treasury receipts from customs at all ports from July 1, to Oct. 23, were about 60½ millions.

The amount of specie sent east by railroad from San Francisco, thus far, this year, has been $5,194,617.

Foreign exchange has attracted much less attention, and rates have been quoted easier, on a rather better supply of bills. Bankers' prime sixty day bills on London closed on Wednesday at 109@109¼, and on Paris to 5.21¼@5.16¼; sight bills on London to 109⅜@109¾, and on Paris to 5.15¾c.@5.14⅜. The offering of produce bills has been less extensive this week. The week's exports of domestic produce have been to the currency value of $3,997,794, making the total since Jan. 1, 1869, $160,123,594, against $135,499,085 same time last year.

Government securities have been offered more freely and prices have been quoted lower, on a restricted volume of dealings in nearly all issues. There has been very little of an investment call, the bulk of the business having been transacted on local account. The Government bought in on Wednesday of the current week two millions of Five-Twenties, all of Messrs. Fisk & Hatch, one million at $114 58, and another at $114 68 nett, out of an aggregate offering of $5,598,250. Some Banks and Savings' Institutions have been marketing the high priced gold bonds, and investing the proceeds in the currency issues, at the going rates, which circumstance has operated against steadiness in values.

U. S. sixes of 1881 closed here on Wednesday at 119½@119⅝; U. S. Five-twenties of 1862, ex-coupon, 120⅜@120⅝; U. S. Five twenties of 1864 at 118¼@118½; U. S. Five-twenties of 1865 at 119⅛@119¼; U. S. Five-twenties of 1865, consolidated, 116⅞@117⅛; U. S. Five-twenties of 1867, 117@117⅛; U. S. Five-twenties of 1868, 117@117⅛; U. S. Ten-forties at 107⅞@108; U. S. Six per cent. currency bonds, 107¼@107½.

The latest quotations at the London Stock Exchange compare as follows with former returns:

* Ex Nov. 1, coupons.

Railway and miscellaneous stocks have been devoid of animation, yet, on the whole, values have been well supported; though there have been daily fluctuations of more or less moment, in the speculative favorites.

General business has shown less activity and less buoyancy. Most kinds of Breadstuffs closed in favor of buyers, the main exception having been mixed Western Corn, which advanced sharply, under speculative purchases. Provisions closed steadily, Petroleum, dearer. Cotton, in less request. Middling upland cotton closed, however, tamely on Wednesday at 26¼ cts. per lb. The stock of cotton now here is given at about 17,500 bales. The receipts at the port this week, have averaged about 4,500 bales a day. The receipts at all the ports, thus far in the year commencing with Sept. 1, 1869, have been 348,171 bales, against 253,507 bales in 1868-'9; exports, same time 115,000 bales, against 61,650 bales same time in 1868-'9; stock on hand at latest dates, 155,790 bales, against 139,798 bales same date 1868. The exports of domestic cotton goods from this port, since Jan. 1, have been 18,337 pkgs., against 18,871 pkgs., same time last year. From Boston, 6,512 pkgs., against 7,484 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in limited demand, at from 8@16½c., per lb.; week's receipts, 4,499. Milch cows rule dull, at $40@$110 each, receipts, 123. Veal calves in less request at from 5@13c. per lb.; receipts, 2,143. Sheep and lambs less active at from 4@6½c., and 7@9c. per lb.; receipts, 43,658. Swine in moderate request at 9⅝@10⅝c. per lb., all live weight; receipts, 23,383.

The week's dry goods imports were valued at $1,618,658, and of general merchandise, $2,807,173, making an aggregate for the week of $4,425,831 specie value, against $4,999,106 same week last year. There has been a fair though not notably active movement in foreign goods, at generally steady prices.

At the auction sale of Scranton Coal on Wednesday, 70,000 tons were disposed of at advanced prices, ranging from $5.25@$8.35, as against $5@$7.22½ per ton of 2,240 lbs., last month, deliverable at Elizabethport, N. J. The latter bids were less spirited than the opening offers.

Freights have been rather quiet, but firm. For Liverpool we quote flour at 2s. 6d.@2s. 9d. by sail, and 3s.@3s. 3d. by steamer, per bbl.; grain at 9½d. by sail, and 10½d. by steamer, per bushel; cotton at ¼@$\frac{5}{16}$d. by sail, and ½@$\frac{9}{16}$d. by steamer per lb.; and heavy goods 20s.@30s. by sail, and 35s.@60s. by steamer, per ton. Total number of vessels in port on Wednesday, 394.

The New York exports, exclusive of specie, for the week ending Oct. 26, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$3,839,694	$3,997,794
Prev. reported	132,159,391	156,125,800
Since January 1	$135,499,085	$160,123,594

The imports for the week ending October 23, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,458,083	$1,618,658
Gen. merchandise	3,540,023	2,807,173
Total for the week	$4,999,106	$4,425,831
Previously reported	203,056,665	244,054,549
Since January 1	$208,055,771	$248,480,380

The balance in the Sub-Treasury on Wednesday was $93,430,027 26.

☞ Louisville, Ky., has voted by a majority of about 500 to subscribe $500,000 to the projected Louisville, New Albany and St. Louis Air Line Railroad. Gen. I. M. St. John, Chief Engineer, in the report of his survey, estimates the cost of grading and trestle work at $1,731,114; track superstructure, including siding and depot yards, $1,413,600; bridges, $115,860; depots, water stations, etc., $200,000; contingencies, including engineering, etc., $300 000. Total, $3,760,583.

☞ The Michigan Air Line Railroad Company, at the annual meeting at Jackson, elected the following officers: President, Col. J. B. Eaton, of Jackson; Secretary, O. M. Bennett, of Jackson; Treasurer, R. W. Landon, of Niles; Attorney, Eugene Pringle, of Jackson; Managing Director, M. A. McNaughton, of Jackson; Chief Engineer, Col. N. Boardman.

☞ Hon. George Greene, of Cedar Rapids, Iowa; H. H. Boody, D. A. Boody, Henry Boody, Leo Lahman, O. D. Ashley, of New York; B. C. Coblentz, of Sterling; Jas. R. Young, of Chicago; and Calvin Truesdale, of Rock Island, have been elected directors of the Rockford, Rock Island and St. Louis Railroad Company.

☞ A contract has been entered into between the Lafayette, Bloomington and Muncie Railroad Company and Messrs. Howard & Wesson, Railroad contractors, for the completion and equipment of the road from Bloomington to the State line of Indiana, by the first day of January, 1871.

☞ Tqe Iowa Central Road is being pushed and is to form a junction with the Yankton Division of the Milwaukee and St. Paul Railway at Nora Springs, and with the Iowa Division at Austin, both points giving the road direct communication with Milwaukee.

☞ Horace Fairbanks has been chosen president, Jonathan Ross clerk, and E. C. Redington treasurer, of the Montpelier and St. Johnsbury Railroad.

☞ Gen. J. T. Boyle has been elected President, and Phelps Sasceen Secretary and Treasurer of the Evansville, Henderson and Nashville Railroad Company.

☞ Joseph L. Griswold has been appointed General Superintendent of the Ohio and Mississippi Railroad.

☞ CHICAGO, DANVILLE AND VINCENNES RAILROAD COMPANY'S 7 PER CENT. GOLD BONDS pay annually, on an investment of $10,000 in currency, $698 25 IN GOLD, while only $475 are derived from $10,000 invested in Government Sixes.

$2,500,000 First Mortgage Sinking Fund Bonds, forty years to run, on 140 miles of road, or LESS THAN $18,000 PER MILE.

Starting at Chicago, the Road runs through the richest lands of Illinois, along the line of Indiana, and from which the local business, bound to this road, is estimated to net $733,000, or nearly THREE TIMES THE SUM required for interest and sinking fund on the WHOLE ISSUE OF ITS BONDS.

It forms part of the SHORTEST LINE FROM CHICAGO *via* Terre Haute, Vincennes, Evansville and Nashville to New Orleans, &c., and opens to the Chicago market rich ORE AND COAL BEDS, sufficient of themselves to insure large earnings.

It also brings the BRAZIL COAL MINES nearer to Chicago by 90 MILES THAN ANY other line.

Total cost of construction and equipment estimated at $4,500,000.

$2,100,000 of stock subscribed, which pays for right of way, grading, bridging, &c.

WHOLE AMOUNT OF IRON ALREADY OBTAINED.

From Chicago to Momence, 55 MILES, NOW OPEN TO BUSINESS, and a considerable part will be finished this autumn.

Pamphlets in more complete detail, with maps, can be had of us on application.

Purchasers may obtain Bonds through our advertised local agents, who will be responsible for their safe delivery, or directly of us, express charges prepaid, the buyer remitting $950 and 7 per cent. in currency interest from October 1, to date, funds current in New York. Any of the Eight Hundred Banks in correspondence with the National Park Bank of New York, will receive and transmit purchase money for these Bonds, and in return receive the Bonds direct from the bank and deliver to the purchaser.

Having personally examined this entire line of road, finished and projected, as well as the country through which it runs, we offer these bonds with entire confidence in their value and soundness.

W. BAILEY LANG & CO., Merchants,
No. 54 Cliff st., New York,
Agents for the sale of the Bonds.

☞ PACIFIC RAILWAY GOLD LOAN, $6,500,000. A seven per cent. land grant, railroad, first mortgage bonds, having thirty years to run. Interest and principal payable in gold. Coupons payable semi-annually in London, Frankfort and New York. Circulars, maps and pamphlets sent on application. The bonds for the present are sold in currency at 95, with accrued interest. DABNEY, MORGAN & CO., 53 Exchange Place. M. K. JESUP & COMP'Y, 12 Pine street.

☞ The Alexandria Canal, Railroad and Bridge Company has appointed Berkly Ward, Esq., chief engineer for the company, to locate a railroad from their aqueduct to Alexandria, Va. They have also contracts for ties and iron for the road, and the construction will be vigorously pushed forward.

Journal of Railroad Law.

COMMON CARRIERS MUST ACCOUNT FOR GOODS WHEN DELIVERY TO THEM IS FIRST PROVED—LIMITATION OF RESPONSIBILITY.

The facts of the late case of Levering *vs.* Union Transportation and Insurance Co. (42 Mo. p. 88) are fully and clearly stated in the following opinion by

WAGNER, J.—This suit was brought by plaintiffs to recover the value of twenty six bales of cotton, which defendant had received to transport from East St. Louis to New York. The cotton was destroyed by fire in the course of its transit, in one of defendant's railway cars. At the time the cotton was delivered to defendant, it gave a receipt for the same, in the nature of a bill of lading, which had stamped across its face the words, "At owners' risk of fire" and also a like reservation in regard to loss by fire inserted in one of the conditions embodied in the instrument.

The plaintiffs claim damages to the amount of the value of the cotton, and allege that the loss was occasioned by the negligence and carelessness of the defendant in failing to furnish suitable cars for its transportation. The jury, acting under instructions of the court, found a verdict for the defendant on which judgment was rendered. There is nothing in the evidence requiring comment; and if the law was correctly and properly declared there is nothing to justify an interference. The plaintiffs were not bound to show negligence on the part of the carrier, in the first instance. All that is necessary to charge a carrier is to prove the delivery of the thing to him to be carried, and the burden of accounting for it is thrown upon him; and if he wishes to exonerate himself from liability, he must either show the safe delivery of the goods or prove that the loss occurred by one of the causes excepted in his undertaking. (Berry *vs.* Cooper 28 Geo. 543.) It is universally admitted that the carrier is always liable for injuries resulting from his own negligence, which will include defects in the means of transportation provided by him; and his liabilities will extend to agencies which the violence of nature causes in consequence of his negligence or defective means. In general he has been held to be an insurer of the safety of the goods intrusted to his care, and can only be exempted from perils occasioned by the act of God and the public enemy. For a long time it was denied by most respectable and eminent authorities that a carrier could release himself from the stringent responsibility imposed upon him by the common law or destroy the character of insurer which he held toward the person employing him either by notice or contract. But the opinion now seems to prevail that he may stipulate for a limitation of his responsibility. (Western Transportation Co. *vs.* Newhall 29 Ill. 466.) But although he may thus restrict his liability, so far as he is an insurer against losses by mistake or accident, he cannot exempt himself from losses caused by a neglect of that degree of negligence which the law casts upon him in his character of bailee.

As the exception is an innovation on the principles of law and introduced exclusively for the benefit of the carrier, the construction must be made most strongly against him.

In Atwood *vs.* Reliance Transportation Co., 9 Watts, 88 in relation to the restriction in a contract by a carrier, Mr. Chief Justice Gibson said "Though it is, perhaps too late to say that a carrier may not accept his charge on special terms, it is not too late to say that the policy which dictated the rule of the common law requires that exceptions to it be strictly interpreted and that it is his duty to bring his case strictly within them;" and the authorities are all to the same effect. The peculiar duty and high responsibility which has been imposed upon the common carrier arises from the public character of his employment the extensive control he exercises over the property of others, and the facilities which he usually has for securing impunity for an abuse of his trust. (2 Kent Com. 597.) It is the imperative duty of a common carrier to receive whatsoever goods are offered to him for transportation in the usual course of his employment, and he takes them with all the responsibilities attached by law to his calling or employment. He cannot vary his liability by inserting conditions in his acceptance of goods; but to have this effect of exonerating him, there must be a special contract assented to by the shipper.

The argument in favor of the right of the carrier to vary his liability, by introducing conditions into his acceptance is founded on a misconception, in considering that his liability is voluntary and arises *ex contractu*. The law attaches the responsibility to his employment or calling, and if he assumes the calling, he has no power over the duties which the law annexes to that calling. His assuming the character of a common carrier depends entirely on his own will and assent; but if he undertakes that occupation, the liabilities which come upon him in respect of goods brought home to him to be carried, are imposed by law and not created by his assent or agreement. The law of common carriers is different from the law applicable to other classes of people. They are recognized by the law as peculiar persons, in respect to whom, in their employment, non-feasance is a misdemeanor; a failure to carry and deliver safely is a *tort*. (Merrit *vs.* Earle 31 Barb. 38.) Public policy and fair dealing on which the extraordinary liability of a common carrier is founded, cannot be undermined and frustrated by the design and circumvention of artfully prepared printed receipts contrived by scheming corporations and soulless companies, thrust upon the public without an opportunity of fair assent, in the press and hurry of railroad travel. But in the case presented for consideration we suppose there was a special agreement between the parties; it was argued on that hypothesis by the counsel on both sides, and seems to stand admitted by the pleadings. It devolved on the defendant to show, notwithstanding the exception exempting it from loss by fire, that the accident did not occur through any fault, want of care, or negligence on its part, or the part of its agents or employees.

The court refused all the instructions asked for by the defendant, and instructed the jury at the request of the plaintiffs that "if the cotton might have been saved by due and proper care by defendant or its employees, then the defendant is liable for the loss.

"The burden of proof is on the defendant to show that the cotton was not lost by reason of any want of care, skill, and diligence on the part of defendant or its employees.

"The defendant is liable for any loss occasioned by the negligence of its agents. If the cotton was burned by reason of the insufficiency of the car in which it was transported, in not being close and tight then the defendant is liable for the loss."

Other instructions were asked by the plaintiffs, which were refused, and in this refusal we see no error, as the above most clearly lay down the law and explain the defendant's liability throwing the whole onus upon it.

It has often been held that this court will not reverse a judgment when the court below refused to give instructions perfectly unexceptionable, provided the law was fully and clearly given by the court in others. After the giving of the plaintiff's instructions, the court, of its own motion, gave the following: "If the cotton in question was lost by fire, while in defendant's possession, on a railroad train, then the defendant is not liable, if the persons in charge of the train took all reasonable care and observed all reasonable precautions in the management and conduct of the train, and if the car in which the cotton was burned was reasonable tight and suitable for the transportation of such freight." This instruction constitutes the chief error complained of by plaintiffs. We cannot perceive that there is any well-founded objection to it. Taken in connection with the other instructions, in effect it tells the jury that it was incumbent on the defendant, before it could screen or shield itself from liability, to show that its agents took that precaution and used that diligence which were suitable and appropriate to the business it was pursuing and the responsibility it had incurred, and also that the vehicle it used for the purpose of transportation was good and sufficient. The ordinary bailee for hire or private carrier is liable only for neglect of ordinary care; but the common carrier is held to a different and higher degree of diligence, and the word "reasonable" used in the instruction is intended to convey the idea that the carrier was bound to use that care and foresight which was appropriate to the occasion and necessary to be used in like exigencies and employments as contradistinguished from that ordinary care which devolves upon an ordinary bailee. A reasonable act is such act as the law requires. (Warne *vs.* Bickford 9 Price, 43). In Riley *vs.* Home 5 Bing. 220, Chief Justice Best, in discussing this question, says: "When goods are delivered to a carrier, they are usually no longer under the eye of the owner; he seldom follows or sends any servant with them to the place of their destination. If they should be lost or injured by the grossest negligence of the carrier or his servants, or stolen by them, or by others in collision with them, the owner would be unable to prove either of these causes of loss; his witnesses must be the carrier's servants, and they, knowing that they could not be contradicted, would excuse their masters and themselves. To give due security to property, the law has added to that responsibility of a carrier which immediately arises out of his contract to carry for a reward—namely, that of taking all reasonable care of it—the responsibility of an insurer. From his liability as an insurer the carrier is only to be relieved by two things—both so well known to all the country when they happen, that no person would be so rash as to attempt to prove that they had happened when they had

not, namely the act of God, and the King's enemies." The taking of reasonable care, and the furnishing of cars reasonably safe and suitable for the business—these seem to be the very things required by law; and unless the carrier shows satisfactorily that he has come up to these requirements, he will be responsible for loss, without regard to his special contract for exemption. The law, it is believed, very properly declared, and we cannot undertake to weigh the evidence.

Judgment affirmed. The other judges concur.

Commerce of New York.

The foreign imports at New York for the month of September, 1868 and 1869, are officially stated as follows:

	1868.	1869.
Entered for consumpt'n.	$14,152,546	$12,938,666

Do. exclusive of specie	119,964,120	140,205,582

Norfolk and Great Western Railroad.

It will be gratifying to the friends of the Norfolk and Great Western road to learn that its President, Colonel Flournoy, has within the last few days concluded important negotiations in New York with the Memphis, El Paso and Pacific Railroad Company, by which the former is made the eastern terminus of the latter great line—the two together forming the Southern Transcontinental Railroad. In this connection it is proper to say that the late Louisville Commercial Convention endorsed and recommended the Memphis, El Paso and Pacific Railroad as the South Pacific road. Colonel Flournoy is engaged in other negotiations with capitalists, the object of which is to put important portions of the road to contract during the coming winter. All acknowledge the importance of this work—all see how, when completed, it will develop a vast trade and attract to our seaboard an amount of business that will be lost to it without such a line.—*Richmond (Va.) Whig.*

Railroads in Peru.

A correspondent of the *N. Y. Herald*, writing from Lima, under date Sept. 28, says that railway matters are steadily progressing. The line to Arequipa from the coast is already ironed for upwards of twenty miles, and the difficult tunnels are being bravely pushed through. Two splendid American locomotives are running on the line, conveying stores, &c., to the workmen in advance, and in the course of a year Mr. Meiggs is confident that the entire line will be completed. The road may be called a political rather than a financial undertaking, the productions and traffic of that section not warranting the expenditure of the $12,000,000 contract price; but if it be extended to Puno the varied and extensive products of the country will speedily find a market, and the road will pay very handsomely.

The railway from Lima to Huacho, a hundred miles north, is also approaching completion. This, running through a district comprising some of the finest sugar estates in South America, and terminating in Huacho, which is the market garden of Lima, is sure to prove remunerative. It is being built by private enterprise, aided in a manner by the Government. In the south a line from the seaport Iquique to the extensive nitrate mines of La Moria, thirty miles inland, is also progressing favorably. Built by a company already largely interested in the nitrate trade, it cannot but be a financial success. In the interior, at Cerro de Pasco, 14,000 feet above the level of the sea, the mineral railway connecting the silver mines with the water courses, where the metal is cleaned and amalgamated, is being vigorously pushed on. The great difficulty experienced in transporting materials to the Cerro, everything having to be carried on mule back and over the first chain of the Andes, causes the works to be retarded a little. The railway from Pisca to Ica, the centre of the wine growing country, and two small lines in the north, are also under way.

Sherbrooke and Kennebec Railroad.

The Directors of the Sherbrooke, E. T., and Kennebec Railway Company have accepted the tenders of Messrs. T. and J. Griffith for sections 2, 5 and 6, and Messrs. G. B. Loomis & Co., for sections 3 and 4, of the proposed railway. These sections comprise a little over ten miles of road, and the work will now be pushed on as fast as possible. Ground will be broken at once, and the grading proceeded with during the winter months, the tenders accepted were the lowest offered.

The Chief Engineer, will in a few days, have several miles more of road ready for contract. He has already made a preliminary survey of most of the line through Westbury as far as the township line of Dudswell, and the line will as soon as possible, be finally located.—*Sherbrooke (Ca.) Gazette.*

Cairo and Fulton Railroad.

This road was chartered by the General Assembly of Arkansas, on the 12th of January, 1853, over sixteen years ago, and the prospects for its construction *now* are no better than when the company was incorporated. The land grants and franchises of the road are more valuable, perhaps, than any road in the State. The grants of land by Congress are munificent—all of which will revert to the Government if twenty miles of the road are not completed by the 28th of April, 1870—a little over six months from the present time. Twice has Congress extended the time for the building of this twenty miles—but with the present inefficient management, it can scarcely be expected that another extension can be obtained.—*Arkansas Gazette.*

The Louisville Bridge.

The great Iron Bridge over the Ohio River at Louisville, Ky., is one of the finest and most imposing structures of the kind in the country. The first stone of this bridge was laid in August, 1867, and the work has been steadily progressing since that time. The bridge consists of twenty-seven piers and four abutments, containing 31,000 cubic yards of stone. Two of the abutments are constructed for the crossing over the Jeffersonville and New Albany Railroad on the Indiana shore. The masonry supports a superstructure of iron of an entire length of 5,280 feet, or one mile, and is composed of twenty-seven spans arranged as follows, from the Kentucky side: Two spans of 50 feet each, one draw span of 264 feet, over the Louisville and Portland Canal, four spans of 150 feet, two spans of 180 feet, two spans of 210 feet, two spans of 227 feet, one span of 370 feet, six spans of 254½ feet, one span of 400 feet, three spans of 180 feet, one span of 150 feet, one span of 100 feet, reaching the abutment on the Indiana side, and a span of 49, crossing the Jeffersonville and New Albany Railroad. This bridge is to be arranged for both carriage and railroad travel, though no street cars or ordinary vehicles can pass at the same time as the locomotives and trains. The railroad track will be laid on the centre, with an outside rail on both sides, so that the rails of the railroad track, with the outside rails, form a double street railroad track. The estimated cost of the bridge, including land and depots, amounts to $1,500,000. It is expected to be completed for the passage of trains early in November.

The Edgewood Railroad.

This is a work that is now attracting the attention of the people of this vicinity to a large extent. We learn that the Philadelphia, Wilmington and Baltimore Railroad Company has expressed, through its officers, a willingness to meet the citizens of the county at a time to be appointed, and make favorable offers for the construction of the Edgewood road during the coming winter. It is said that the Port Deposit branch of their road has proved highly remunerative, even with the water carriage in competition with it, and they are convinced that a road from Belair, to intersect their own at Edgewood or other convenient point, will prove equally if not more so. All the freight that goes by wagons or otherwise to Baltimore, and the return freight for our farmers and country merchants, would be concentrated from a large scope of country to this road.—*Harford (Md.) Ægis.*

☞ It is telegraphed from Washington that upon the presentation of a coupon of one of the two year five per cent. Treasury notes issued by Mr. Chase under the act of March 3, 1863, the Treasurer of the United States refused payment. The applicant then obtained an order from the Comptroller of the Currency for its payment. The Treasurer still refusing, the holder appealed to the Secretary of the Treasury, who upholds the Treasurer, on the ground that it is distinctly stated on the coupon that it is void when detached except by an officer of the Government.

☞ Mr. H. D. Newcomb has been re-elected President, and Willis Ranney Secretary of the Louisville and Nashville Railroad Company, for the ensuing year.

☞ A letter to the *Herald*, dated Panama, Oct. 15th, says the friends of the Darien Canal scheme are beginning to look forward more hopefully than they have lately been doing. It is generally believed that the Legislative Assembly will instruct their Senators and Representatives to the Congress at Bogota to vote in favor of granting any reasonable privileges or concessions that might be asked by those anxious to carry the matter through. The President and every one interested in the prosperity of the State is most anxious to have it accomplished, and will lend all aid and assistance thereto.

☞ General Spaulding, Chief Engineer of the Costa Rica Railroad, wrote to the supreme Government of Costa Rica on the 25th of August, that on that date the work of grading and construction had been commenced at Limon in pursuance of the contract entered into between the Government and Messrs. Reilly, May, Vickers & McArthur.

☞ Rutland Vt., has voted to subscribe for 250 shares of the capital stock of the Massachusetts Central Railroad. The town of Barre voted unanimously to subscribe for 900 shares of the same stock.

☞ The citizens of Rockbridge County, Va., have voted $400,000, as the county subscription towards the building of the Virginia Valley Railroad.

FIRST & PRYIBIL'S
PATENT IMPROVED
BAND SAW MACHINE,
452, 454 & 456 Tenth Avenue,
NEW YORK CITY.

PRICE - - - - - $350.
BOXING AND SHIPPING, $10.

This Machine, with the exception of the table, is made entirely of Iron. Its weight is 1800 lbs.; drums 3 feet 3 inches in diameter; height, 8 feet 5 inches; depth 4 feet 3 inches; width 6 feet; driving pulleys usually 14 inches in diameter, or to suit our customers.

Our machine can be run with a speed of 330 to 350 revolutions per minute, causing the saw to travel 3300 to 3500 feet per minute, and with a belt from 4 to 5 inches in width a block of Rosewood from 10 to 15 inches thick, or wood of any kind, hard or soft, can be cut with ease and facility, the saw being from one-quarter inch to one inch in width. A saw one-eighth of an inch in width, including teeth, can be used for cutting wood of considerable thickness.

The saws are not liable to break owing to our improved slide bearing, which adjusts itself according to the expansion and contraction of the saw. No saw will break except by accident or gross carelessness. The same is used principally by railroad car, chair, and other furniture manufacturers, ship, boat, and wagon builders, and also to saw slate, ivory, bone, &c. Guarantee will be given for all we state above. From three to five times as much work can be done with one of our sawing machines, as with an ordinary up and down saw. The work is cut smooth, the saw being retained by an improved guard.

At the present time, Sept. 1869, 64 of our machines are running in this city, and about twice as many in the country.

We also manufacture a lately patented counterbalance oval turning lathe which can be run with more than twice the speed of the old style of lathes, and much more and better work will be done. Many other wood working machines, and also shafting, pulleys, hangers, &c., &c., constantly on hand. Send for Circulars.

Jonathan T. Hobby,

MATHEMATICAL Instrument Maker, Greenwich Street, Hempstead, Long Island N. Y.

NEW YORK CITY STEEL WORKS,

Manufacture every description of Steel—PERFECTLY UNIFORM IN QUALITY—and of very great tensile and compressible strength.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.

That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

MANUFACTURERS OF ALL KINDS OF

RAILROAD MACHINERY.

SILVER PALACE SLEEPING CARS of the **finest finish**, also all kinds of PASSENGER AND FREIGHT CARS, DUMPING CARS, HAND CARS, WHEELS and AXLES, STEEL SPRINGS, and in fact EVERYTHING for the **full equipment** of a road.

From our long **experience** in Car building, and our **facilities** for doing work, we are enabled to give ENTIRE SATISFACTION in every particular.

From our LOCATION, and CONVENIENCIES FOR SHIPMENT, we can supply southern roads with dispatch, and ship at reasonable freights.

We are also extensively engaged in building IRON VESSELS and IRON STEAM BOATS, STEAM ENGINES and BOILERS and **Machine Work in general.** All orders executed with dispatch and on reasonable terms.

WEST POINT FOUNDRY.

Paulding, Kemble & Co.

Manufacture all Kinds of Machinery—Marine and Stationary—Blowing Engines, Presses, Boilers, Bridges and Piers, Rifled and Smooth-bore Cannon, Wrought and Cast Iron Work for Buildings, and for all other purposes.

Office in New York, 30 Broadway

RICHARD B. OSBORNE,

THROUGH LINE TO

California and China.

FREIGHT AND PASSAGE GREATLY REDUCED.

Through rates, New York to San Francisco:

First Class. Steerage.

$140 to $180. $65.

according to location of berth.

These rates include berths, board and all necessaries for the trip.

Steamers of the above line leave Pier No. 42 North River foot of Canal street, at 12 o'clock noon,

On 1st and 16th of each Month,

except when those days fall on Sunday, then the day previous.

One hundred pounds baggage free to each adult. Medicine and attendance free.

Nov. 1, ARIZONA, Capt. Maury, connecting with MONTANA, Capt. Farnsworth.

Steamer JAPAN, will leave San Francisco Dec. 4, for China and Japan.

NOTICE TO SHIPPERS.

For reduced rates of freight apply on wharf. Freight for steamer ARIZONA, received until 4 P. M. on SATURFRIDAY, Oct. 30. All usual facilities afforded shippers in collecting inland charges, &c.

For freight or passage tickets and all further information apply at the Company's ticket office on the wharf, foot of Canal street. F. R. BABY, Agent.

BURLEIGH'S PATENT

Pneumatic Rock Drill

Is now in successful working operation in New York, Chicago, Jersey City; also at the Hoosac Tunnel (Mass.,) Lake Superior, Colorado and Nova Scotia Mines, Union Pacific and Boston and Hartford Railroads; also in deepening the beds of the Illinois and Michigan Canals, and Des Moines Rapids, and numerous other localities.

The Burleigh Drill is adapted to all kinds of rock cutting in open cut Mining, Tunnels, Sewers, Quarries, &c., drilling holes from 1¼ to 6½ inches in diameter. The Drills are worked either by steam or compressed air. For all kinds of work under ground compressed air is used, serving as a perfect ventilator, as it is exhausted from the Drill. At the Hoosac Tunnel the compressed air is carried upwards of a mile and a quarter, and at that distance works eight Drills at the same time. Information in regard to the ownership of the different State rights. Prices of Drills, Air Compressors, &c., can be obtained at the office of

J. T. & W. H. DALY,

Union Patent Stop Washer.

How it should happen that a piece of leather or metal laid between a bolt nut and the thing it holds fast has gone from time immemorial under the technical name of a washer, is one of those mysteries of the past into which it would be idle to examine, were it not for our knowledge of the inherent poetry of all honest work in life, and the tendency to turn aside from its original meaning inherent in all words in common life. But this lets us into many a secret.

Our stop washer, then, is simply a new and very clever contrivance, and a very effectual one, to *watch* the nut on the end of a bolt. And the way in which Mr. A. Gibson, of Coatesville, Pa., has managed to effect this, is worthy of all praise. His circular says: "the patents cover the principle of turning a flexible material held in place against a nut to prevent its receding or getting loose." Mr. Wilson, Chief Engineer of the Pennsylvania Railroad, writes to him:

"As we are now using the English fish bar splice, to the exclusion of all other joint fastenings, we need washers on every joint to keep the nuts tight, and expect to continue ordering from you as heretofore."

Mr. Cassett, Superintendent of Motive Power at Altoona, adds:

"There are a great many bolts about a car to which I think they can be applied to advantage; and they are a perfect Stop Washer—there is no possibility of the nut working off."

Mr. Reeves says that the Phœnix Iron Company uses it exclusively on their new "Reeves Rail Joint," of which there were already July 12, 1869, 40,000 joints in general use, requiring two bolts and nuts each, and he had never heard of a nut turning. Mr. Heizmann, resident Engineer of the Philadelphia Division Pennsylvania Railroad, calls the washer an undoubted success, having been used on the road since early in 1868. Such testimony ought to recommend it. It is simple, cheap, and does its work, dispensing with the common washers and with jam nuts and saves the trouble and expense of watching and tightening. The alleged saving over jam nuts is thus stated: 4 bolts to each joint (25 feet rail)=1088 bolts per mile=844 lbs. × 7½c.=$63.30. Whereas the washers cost from $21.10 to $50.64 (saving from $42.20 to $12.66 per mile) according to size and kinds.

The invention consists of a disc, or two discs connected by a strap, of flexible metal, cut into a six pointed star, in the centre of which is the bolt hole. The washer being slipped over the bolt, the nut is screwed down and two opposite points of the star are bent up against its sides, holding it in a gentle but immovable embrace, no vibrations or expansions can make it turn.—*U. S. R. R. & Mining Register.*

Changeable Gauge Freight Car Trucks.

The Lobdell Car Wheel, Tire and Machine Company, of Wilmington, Delaware, have been made sole agents for the South and Southwest of New York for the manufacture and sale of the Patent Adjustable Gauge Cars. Several hundred of Adjustible Gauge Cars, constructed under these patents, are now and have been running successfully in a through freight line between the New England and Western States for the past year, which number is to be largely increased as soon as they can be built.

☞ Hon. Geo. H. Pendleton has been appointed President of the Kentucky Central Railroad.

Wharton's Safety Railroad Switch.

A valuable improvement in the important matter of *safety from railroad accidents* caused by misplaced switches, was tested yesterday, on the Pennsylvania railroad above the Wire Bridge, and on the West Chester railroad near Thirty-second and Walnut. The switch used was "WHARTON'S SAFETY SWITCH." It is very simple in its mechanism and substantial in its structure, but cannot be accurately described without the use of diagrams to show its mode of operation. Its striking peculiarity is that it preserves the *main track unbroken*, keeping it as completely intact when the switch is open as when it is closed, and by means of this peculiarity it does away with the risk of the frequent and fatal accidents caused by misplaced switches. The first test was at the siding just above the Wire Bridge, where two men lost their lives not long ago because the old switch was accidentally left open when a train was passing on the main track. There is a WHARTON SWITCH there now, and at the trial yesterday the switch was set wrong for the main track, but right for the siding, whilst a locomotive and tender were running along the main track. The engine and tender, however, kept firmly on the track, the same as if no switch were there at all.

This test was repeated a number of times and in various ways, with the engine running back and forth on both the siding and the main track, and with the switch set both right and wrong, locked and unlocked. The trial was so perfectly satisfactory that the party of gentlemen present, by invitation, got on board the locomotive and passed over the switch at a speed of thirty miles an hour, when it was set as wrong as it could possibly be put by any negligence or any ingenuity of malice or wickedness.

There was subsequently an additional test near Thirty-second and Walnut, on the West Chester Road, where the switch was misplaced in every way that the experience of the railroad men present could suggest, and the locomotive, tender and car were run over it at various speeds, from that of the mere gravitation of a single car on a down grade, to a velocity of forty miles an hour, and the result was still the same. The switch was then taken to pieces and nearly all the movable

parts taken away, so as to show what would happen if it should get broken, and still the locomotive and tender passed firmly as well as safely along the main track. It is not easy to imagine how there can be any doubt as to its absolute safety. The railroad operatives present all gave it their unqualified approval, and spoke of it as an invention that would relieve them from many of the risks and perils of their occupation.

This switch has been in partial use for several years on some of the roads near Philadelphia. There are about seventy on the Reading road, and a few on the Pennsylvania and Baltimore roads. It is the invention of WILLIAM WHARTON, JR., Civil Engineer, of this city, and a factory, built for the purpose, at Thirty-second and Walnut streets, is now engaged in the manufacture of the safety switch.—*Philadelphia Ledger, Oct.* 26.

Ohio and Mississippi Railway.

The following is a statement of the earnings and expenses of this road for the years ending December 31, 1867 and 1868:

Earnings:	1867.	1868.
From passengers	$1,429,210 56	$1,230,981 92
" freight	1,872,428 25	1,586,818 96
" mails & express	157,680 46	146,239 79
	$3,459,319 27	$2,964,040 67
Expenses:		
Maintenance of way and structures	$718,869 93	$858,051 59
Motive power & cars	433,941 85	269,224 99
Transportation exp.	1,011,168 23	978,904 71
General expenses	97,130 84	98,876 46
Taxes, Municipal and Government	84,486 55	82,262 16
Damages to property, cattle killed, etc.	50,193 26	23,293 88
	$2,395,790 66	$2,300,613 79
Net earnings	$1,063,528 61	$664,326 88

Compared with 1867, the gross earnings of 1868 show a decrease of $495,278 60, with a decrease in the ordinary operating expenses of $95,176 87—making the decrease in net earnings, $400,101 73.

The ordinary expenses really exhibit a much larger sum than legitimately belongs to it, and as compared with 1867, shows a proportionate decrease with the earnings.

To the difference stated above	$95,176 87
Should be added the purchase of 3,[illegible]00 tons of railroad iron, costing	287,643 08
	$382,819 95

—which would increase the net earnings (deducting the iron purchases from the expenses,) the sum of $951,069 96. The extraordinary expenses, not included in the above, were as follows:

Excavations, fillings & embankments	$3,165 55
Ballasting road bed	33,686 80
Fencing road	11,121 88
New depots	9,126 14
Miami Bridge	140,628 19
Track connection with L. M. R. R.	4,360 59
Filling Front st. wharf	15,229 16
Rebuilding iron bridges	46,212 07
Legal services, interest on loan, discount on sale of bonds, and salaries of officers due from previous year	189,853 11
New cars	29,775 00
Wheels on new locomotives	3,617 25
Expenses on account of change to narrow gauge	204,624 30
Total	$691,350 04

The extraordinary expenses have been reduced about $500,000, deducting from the amount charged, the items of discount on sale of Consolidated Mortgage bonds, and for change of locomotive engines and cars to narrow gauge, and the difference between the amounts charged this account in 1867 and 1868.

The following statement of receipts and disbursements for the current year 1868, shows the receipts from all sources, and the payments made on the several accounts charged. First, the receipts on account of earnings for the year, and then the payment of the current claims provided for out of the earnings for current business. Second, the receipts from all sources, other than earnings, and the several payments of general claims absorbing such receipts, and leaving a cash balance in hand, January 1, 1869, of $163,694 71:

Received on account of earnings in 1868		$2,846,942 66
Paid on account of operating expenses in 1868	$2,091,979 56	
Coupons of interest on bonded debt	318,187 23	
Interest on preferred stock & certificates	239,823 32	
Increase of materials	40,765 57	
	2,690,755 68	
Leaving a balance of		$156,186 98
Add cash balance, January 1, 1868		154,205 50
Receipts from uncollected revenue of 1867		128,113 53
Accounts open on account of the rebuilding Miami Bridge		94,027 32
Open accounts in settlement		25,595 45
Temporary loans increased		123,753 16
Proceeds of sale 1076 Consolidated bonds		912,265 00
Total		$1,594,146 94
Paid on account of real estate		$38,766 86
Pay rolls, due of 1867		137,269 88
Bills of purchases of 1867		154,318 79
On account of extraordinary exp.		527,615 04
Accounts in settlement with contractors, rebuilding Miami bridge, etc.		70,986 78
Charges due to other roads		8,890 10
Open accounts in settlement		10,200 52
Coupons of interest due by the Receiver, and accounts settled, including amount due Geo. Peabody & Co		229,530 36
Coupons of interest First Mortgage W. D., due previous to January 1, 1868		41,844 82
Interest due on Preferred "Trustees" certificates, prior to January 1, 1868		216,029 58
Balance, cash on hand, January 1, 1869		163,694 71
Total, as above		$1,594,146 94

Included in the general receipts is stated the net proceeds of the sale of 1076 Consolidated Mortgage bonds, disposed of at an average rate of about 86 per cent., yielding the sum of $912,265, which, added to the old outstanding bonds, makes the bonded debt of the company January 1, 1869, $4,964,000, authorized to be increased to $6,000,000, leaving yet to be sold, $1,036,000.

Of the $20,000,000 common stock authorized to be issued, there has been converted of the "Trustees'" certificates into common stock, $19,057,473 83. Of the $3,500,000 Preferred stock, there has been converted of the "Trustees" certificates into preferred stock, $3,345,950 89. The whole amount of preferred certificates issued by the "Trustees" was $3,354,000, leaving *available* to be issued of preferred capital stock, $146,000 to complete the amount authorized.

GENERAL LEDGER ACCOUNT,
From Nov. 1, 1867, *to Dec.* 31, 1868.

Railroad	$24,068,830 89
Real estate, etc.	1,468,938 56
Equipment	1,707,000 00
Telegraph line	25,042 59
Illinois Southern R. R. purchase	279,819 17
Shop tools and machinery	141,740 93
Materials on hand	154,964 03
Ordinary operating expenses	2,801,288 84
Extraordinary expenses	844,941 96
Mortgage bonds, coupons and interest paid	860,081 92
Interest on preferred stock and certificates	461,701 05
Running accounts in process of settlement	40,779 49
Accounts with agents and others for uncollected revenue	110,060 84
Cash balances on hand	163,694 71
	$32,628,884 98
Common capital stock certificates	$19,057,473 86
Trustees' certificates, unconverted	942,526 14
Trustees' common certificates to be provided for outside of capital stock	226,604 44
Preferred capital stock certificates	3,345,950 89
Trustees' preferred certificates unconverted	8,173 73
First Mortgage bonds, E. D	2,050,000 00
First Mortgage bonds, W. D	850,000 00
Second Mortgage bonds, W. D	556,000 00
Income bonds, W. D	221,500 00
Funded debt bonds, W. D	16,500 00
Consolidated bonds	1,270,000 00
Earnings	3,572,159 32
Pay rolls unpaid	98,569 35
Bills of purchases unpaid	107,809 89
Running accounts to be settled	25,091 02
Notes outstanding	46,680 00
Open accounts of 1867 and 1868	233,816 34
	$32,628,884 98

The following is a list of the officers and directors who were elected at the recent meeting of the stockholders:

President.—W. D. GRISWOLD.

Vice President—ALEXANDER H. LEWIS.

Directors.—William D. Griswold, Larz Anderson, W. W. Scarborough, Alex. H. Lewis, Cincinnati; John Ross, Vincennes; Lewis B. Parsons, John J. Roe, St. Louis; Joseph W. Alsop, William H. Aspinwall, William Whitewright, Jr., Samuel U. F. Odell, Allan Campbell, Frederick Schuchardt, New York.

Gen'l Superintendent.—J. L. GRISWOLD.

Treasurer.—CHARLES S. CONE.

Auditor.—P. VAN DEURSEN.

Secretary.—E. D. HAMMOND.

Ass't Secretary.—SAMUEL TREVOR.

Spuyten Duyvil and Port Morris Railroad.

The route of this road will be through the valley of the Spuyten Duyvil Creek to the Harlem River, and along the course of that river to the mouth of Cromwell's Creek; from which it will strike across West Morrisania towards the Harlem Railroad; thence along what is known as the ridge to Mott street, in Melrose; thence across the low lands of that village and that of Bensonia, to connect with the present Port Morris branch of the Harlem road. The change of engineers caused delay in the construction of the line. The present engineer has adopted, almost entire, the route laid out by the former, and the work will be soon begun.

☞ The Queen Anne's Railroad will soon be completed. Only three miles, which is between Millington and Sudlersville, remain unfinished.

Georgia Railroad and Banking Co.

The earnings of this road for the years ending March 31, 1868 and 1869, were as follows:

	1868.	1869.
From passengers	$288,865 28	$321,789 78
" freight	694,321 38	761,694 25
" mail	21,037 00	21,037 01
	$1,003,723 66	$1,104,521 04
Expenses, viz:		
Conducting transp.	$129,228 87	$146,341 59
Motive power	203,841 44	222,869 04
Maintenance of way	132,509 69	148,280 12
Maintenance of cars	46,254 28	57,967 93
	$511,834 28	$575,458 68
Earnings less expenses	$491,889 38	$529,062 26

Deduct extraordinary expenses, viz:

Renewing locomotive engines	$61,976 15	
New cars & rebuilding cars	53,645 68	
New railroad iron, chairs and spikes	43,000 00	
Ties and labor laying new track	12,263 55	
		176,258 69
Net income		$352,803 67

Out of which has been paid—

For 4 new locomotive engines	$49,093 22
New freight house & offices at Atlanta	30,947 82
Bal. on new round house at Atlanta	4,408 86
Surplus	268,353 77
Total, as above	$352,803 67

Compared with the previous year, the gross earnings show an increase of $100,797 38; with an increase in expenses and payments, both ordinary and extraordinary, of $17,254 78—making the increase of net income, $83,542 60. The President in his report says:

The Superintendent shows a gross profit of $1,104,521 04, and a net profit (deducting ordinary and current expenses) of $529,062 36; and deducting all payments on account of road, ordinary and extraordinary, a surplus remains of $268,353 77, applicable to other purposes. The company, however, has some valuable assets independent of the road, and the entire net income for the year may be stated thus:

Net income from the road after all payments, as above stated		$268,353 77
Dividends on stocks, interest, and rent	$100,711 75	
Charged with interest on bonds, taxes, & salaries	59,304 26	
		41,407 49
Total net profits		$309,761 26

It will be perceived by the above that after paying all expenditures and appropriations on road account, the company had for last year a net income of $309,761 26.

Two dividends have been declared in the year of $4 per share each, amounting, with the tax of $16,624, to $349,104. The deficit in net profits, to pay these dividends, was taken from and charged to reserved fund. This fund has also been charged with various items of war damage and losses by the old Bank in liquidation, and stood on the 31st of March, as will be seen, at $718,233 53. This reserved fund, as it is known, is not immediately available as a cash resource. It has resulted, to be sure, from net profits over all expenses incurred and debts contracted; but it is invested in our assets, some of which we do not wish to part with, and others are depreciated and unavailable. These assets are however valuable, and abundantly sufficient, even under forced sales, to pay all liabilities of the company and leave it entirely free from debt. That they are valuable, may be seen from the fact that they produced an income the last year of $100,711 75, and relieved the road earnings from all salaries in the financial department, the entire interest on the funded debt, upwards of $16,000, taxes, and leaving a balance in aid of dividends of $41,407 49. The income from these assets may not be fully maintained in future, butit is not doubted that they will continue to yield a sufficient income to meet the interest on the bonded debt of the company, or any debt the company is likely to contract. It has been the policy of the company to contract no debt not fully covered and provided for by the assets, thereby leaving the stock whole, and the company virtually out of debt. Some increase of the bonded debt since the last annual convention, proves no departure from this principle. To save the forced sale of assets at an under value, and liquidate some war damage claims and bank circulation, and provide in part for the heavy extra work for restoration of property, without interfering with dividends, the Board authorized an issue of 7 per cent. bonds to a limited amount, which have been sold at a premium. But the amount of assets has not been exceeded or even equalled, and the issue has been stopped.

The Superintendent has stated the gross and net profits of road operations for the past year. He also states the encouraging fact that the gross earnings exceeded those of the year preceding $100,797 38, and the net earnings those of the preceding year, $83,542 00. He also states in detail the expenditures on account of the road, distinguishing the ordinary from the extraordinary. The extraordinary are so called because of extraordinary causes—that is, by the waste and ravage of war. These changes make no difference in the capital. They are all charged to profit and loss account, like the ordinary current expenses. These expenditures have continued to be large, but with a round house in Augusta, and a few minor items, this distinction may be dropped—though somewhat larger outlays for new iron than "ordinary," will be required for several years.

Though the business of the year has been very satisfactory, it has been maintained under very strong and active competition. With a much heavier tonnage and 20 per cent. more mileage, an increase of 10 per cent. in gross profit has only been realized from the low rates at which much of the work has been done. Roads continue to multiply, by which we shall in the future be variously affected; but the Board are inclined to believe, with the Superintendent, that the present profits of the road may be maintained.

Compared with other contiguous roads, our business in the transportation of cotton has been very encouraging. Whilst other neighboring roads have fallen off largely, the number of bales transported over our road has only declined 8,336 bales, and that loss has been entirely on cotton from Montgomery. From that point we transported in 1867-8, 12,062 bales, and the last year only 2,903 bales; decrease, 9,159 bales, which more than accounts for the whole decrease. From most other points beyond our terminus, especially the Northwest, we have had a handsome increase. The loss from Montgomery is easily accounted for. It was partly from the short deliveries at that point, but mainly from the control of the Montgomery and West Point Road by rival interests. Where the competition is equal, we may always expect our full share in the transportation of this important staple. Augusta is fast regaining its former popularity as a cotton market, and as an entrepot, its advantages are unrivalled.

We are also much pleased to find a progressive increase in the grain and provision trade from the West. In 1867-8, we transported of corn 487,828 bushels; and in 1868-9, 1,059,043 bushels; increase, 571,215 bushels. We transported wheat, 104,640 bushels in 1867-8, and in 1868-9, 802,411 bushels; increase, 197,711 bushels; and the same increase is found in most other articles of Western production. Should the increased facilities in the means of transporting grain in bulk, spoken of by the Superintendent, be realized, this business will become one of much importance to us. It is to a great extent, a Summer business much needed by Southern Roads, as it gives employment to their stock at a season when much of it is idle.

To provide a safe and convenient fiscal agency for our own business, and with a hope of making some profit on the earnings of the road until needed, and upon private deposits, an office of discount and deposit has been recently re-opened. The business has scarcely been fairly opened, and a large business will not be sought or desired. The small business yet done has been entirely safe, and it should be the policy of the Board to keep it so, and run no risks. Agencies have been established at Atlanta and Athens, and from the high credit of the institution, deposits will no doubt soon accumulate, when the business may be safely enlarged and the profits increased. The uncertain and fluctuating value of the currency is, however, very much against a safe and profitable banking business upon deposits.

The company have 41 locomotives, of which 25 are in good order, 23 passenger, 10 baggage, 292 box, 18 coal, 100 platform, 14 shanty, 14 cab and 27 stock cars. Miles run by engines 747,099. Miles of road in use 231. Bales of cotton transported, 104,372. Bushels of grain, 1,407,326. Barrels of flour, 12,530. 12½ miles of new iron have been laid during the year, making in all 47½ miles of new iron laid down since the close of the war.

The following is a Condensed Statement of the condition of the Georgia Railroad and Banking Company, on the 31st of March, 1869.

The road and its outfit		$4,156,000 00
Real estate		114,628 66
Banking house and lot		35,000 00
Road expenses and expenditures for the road	$882,090 10	
Incidental expenses and salaries	13,113 86	
Interest on bonds	29,633 58

President.—JOHN. P. KING

Directors.—E. E. Jones, B. H. Warren, John Bones, Edw. R. Ware, Sam'l Barnett, Antoine Poullaine, James W. Davies, L. M. Hill, Richard Peters, Stevens Thomas, James S. Hamilton, Geo. T. Jackson, M. P. Stovall, Thos. J. Burney, D. E. Butler, Green Moore.

Gen'l Superintendent.—E. W. COLE.

Ass't Superintendent.—S. K. JOHNSON.

Treasurer.—J. MILLIGAN.

Steel Rails.

ELEVEN HUNDRED MILES OF STEEL ROAD IN THE UNITED STATES—AMERICAN AND ENGLISH RAILS—STEEL HEADED RAILS—ADVANTAGES OF SOLID STEEL.

Eight years ago steel rails were a doubtful experiment. To-day they are a fixed fact and an absolute necessity. When they were first offered for sale, as was recently stated by Mr. W. Bragge, the gentleman on whom devolved the difficult task of introducing them, they were looked upon with distrust, and only by giving rails to be made into points and crossings, on trial, to be paid for when they had earned their value, was it possible to dispose of them in England. In 1861, Mr. George Wilson, agent of Cammell & Co., who were among the earliest steel-rail makers, and manager of their famous Cyclops works at Sheffield, visited this country with specimens of the new manufacture, and succeeded in persuading the far-seeing President of the Pennsylvania Central Railway to purchase a few hundred tons, which were laid during the ensuing season on the most trying portions of that road. These were the first steel rails used in the United States, and the credit of their introduction is largely due to Mr. Phillip S. Justice of Philadelphia, who perceived at once the advantages which they must possess over iron rails, and exerted his influence to secure a trial for them. Notwithstanding this auspicious opening, the sale of steel rails in this country was very far from easy work. When the subject was first brought to the notice of the President of the New York and New Haven Railway, one of the directors of the company chanced to be sitting in the office, absorbed in a newspaper. Catching the topic of conversation between the President and the agent, he suddenly looked up, exclaimed with a sniff of supreme contempt, "Steel rails? Bah! stuff! bosh! nonsense! humbug!" and then relapsed into his newspaper again, leaving the President to take the very broad hint and the agent to sell no rails. As an offset to this, and as a good illustration of the progress steel rails have made in the good opinion of American railroad men, the fact may be cited that less than a week ago, the General Superintendent of the very same road promptly replied to the question, "How many steel rails are you laying this season?" with the significant remark, "All that we can raise the money to pay for!" In England, too, it is only a few weeks since the engineer of the Metropolitan Underground Railway of London stated to an American gentleman, that without steel rails it would have been utterly impossible to operate that road successfully; for the heavy trains, drawn by forty-five-ton locomotives, starting every five minutes, and stopping at half-mile stations, and running forty miles an hour with the brakes down more than half the time, would have used up the best iron track so fast that it could not have been relaid without interfering most seriously with the traffic of the line. And, finally, the report of the exhaustive and important discussion held last year by the Institution of Civil Engineers in England, sums up the case in these words: "There can be no doubt as to the expediency of employing steel rails, even on railways where the traffic is light; but, of course, the heavier the traffic the greater will be the economy of substituting steel for iron."

In view of this forcible verdict in favor of steel rails, it becomes a matter of great public interest to know by what companies and to what extent these rails are being laid in the United States. The report on Railroads of the State Engineer and Surveyor of New York, prepared by S. H. Sweet, Deputy, says: "It is estimated that from 40,000 to 50,000 tons of steel rails are in use on our various railways." Careful researches, made in this city during the past week, warrant the use of much more encouraging figures, and authorize the assertion that by the end of the year 1869 there will be laid in the United States, in round numbers, one hundred and ten thousand tons of steel rails, equal to eleven hundred miles of steel road; and of this amount about thirty-six thousand tons, equal to three hundred and sixty miles, will be laid during the present season! These rails are in use on more than 50 different roads, and are partly of American, principally of English, and to a very small extent, of Prussian manufacture.

Four large steel works for making rails have already been established in this country, and a fifth is nearly completed. John A. Griswold & Co., proprietors of the Bessemer Steel Works of Troy, N. Y., made about 2,000 tons of steel rails, half of them for the Erie Railroad, prior to the burning of their works in October, 1868. None of these rails have broken, and official certificates testify that they are equal to the best foreign rails. The new works, now nearly completed, will enable the proprietors to produce steel rails at the rate of 15,000 to 20,000 tons per year. The Pennsylvania Steel Works at Harrisburg are now, and have been for some time, producing steel rails at the rate of 12,000 tons annually. These are mostly laid on the Pennsylvania Railroad, and the official reports show them to be equal to the best foreign rails. The yearly capacity of the works is 20,000 tons. The Cleveland Rolling Mill Company are producing steel rails at the rate of 6,000 to 8,000 tons per year. They have only recently started and are not yet in full operation. Their capacity is 15,000 to 20,000 tons per year. Their steel is of Lake Superior iron and is of excellent quality. The Freedom Iron and Steel Works at Lewistown, Pa., are producing rails for the Pennsylvania and other roads at the rate of some 8,000 tons per year. Their annual capacity is 10,000 to 12,000 tons. Their steel is pronounced by the Pennsylvania Railroad Company, after rigid tests, equal to the foreign. The Cambria Iron Company have a Bessemer steel works nearly completed at Johnstown, Pa. Its capacity will be 20,000 tons. The above statements are authorative, and clearly indicate that we shall be able, by next year, to produce annually at least 80,000 tons of good, American-made, steel rails, a fact full of promise for the future of American railways. It may also be stated here that the proprietors of one of the largest iron-rail-making establishments in Pennsylvania, after struggling vainly for four years against the rising steel-rail tide, are now negotiating for the services of able and experienced German engineers and metal-workers, with a view to immediately establishing steel works, at which they confidently expect, within a year, to produce steel rails equal to the best for $75 a ton, which is less than the present price of good iron rails! The report quoted above states that some 7,000 tons of domestic steel rails have already been laid, and it is certainly safe to assume that 5,000 tons will be laid this season, making a total in round numbers of at least 12,000 tons (120 miles) of American steel rails in use in the United States at the end of 1869.

The English steel rails laid in this country are made by four great manufacturing companies, each having an agent in this city. Guest & Co., of the Dowlais Works in South Wales, are very celebrated makers of the iron rails, but have not long been engaged in the steel-rail manufacture, and have only been actively in the American market a little more than a year. Eight hundred tons of their rails are in use on the Erie Railway, and 1,200 tons on the New York Central. The orders for this season include 1,000 tons for the Delaware, Lackawanna and Western, 750 tons for the New York and New Haven, 500 tons for the Hudson River, and small trial lots for the Boston and Providence and other roads, making a total of about 3,000 tons for this year and 5,000 tons in all. The rails for the Delaware, Lackawanna and Western Railway were ordered through an influential director, who visited the Dowlais Works and was so well satisfied with what he saw that the order was given, despite the fact that the managers of this road have hitherto strenuously opposed steel rails in consequence of being pecuniarily interested in iron rail-works. The Guest rail weighs about 60 pounds to the yard, and is tested with the utmost severity, by placing it on bearings three feet apart, and then dropping a ton-weight on it from a height of 30 feet. Guest & Co. made the huge 85 pound rail on the London Underground Railway, and said to be the heaviest steel rail ever made. A specimen of it may be seen at the office of their agents, Perkins Livingston, & Post, No. 68 Broadway.

The steel rails of the Barrow Hematite Steel Company have been for sale in this market a little more than two years, during which time fully 15,000 tons have been sold, the sales this year reaching about 10,000 tons. The first Barrow rails laid in this country were put down three years ago on the curved track running out of the Hudson River Railroad depot at Thirtieth-st., and, as yet, they show scarcely a sign of wear. Four thousand tons of Barrow rails are going down this Summer on the New York Central, and about 2,500 on the Hudson River, while others in various quantities are now laying, or have been laid on the Pennsylvania Central, Baltimore and Ohio, Philadelphia, Wilmington and Baltimore, Reading, New York and New Haven, Connecticut River, Boston and Providence, Providence and Worcester, Old Colony and Newport, Norwich and Worcester, New Jersey Transportation, Lehigh Valley, Northern Pennsylvania, Norristown and Germantown, Toledo, Wabash and Western, Chicago and North-Western, Chicago, Rock Island and Pacific, and several other roads. The steel from which the Barrow rails are made is of a peculiarly excellent quality, the works are on the most extensive scale, the appliances are all of the most approved character, and the rails themselves are winning such favor, and are in such demand all over the world, that the orders, despite the great capacity of the works, 1,200 tons per week, or 60,000 tons yearly, can scarcely be filled as fast as they are received. The popularity and success of the steel rail manufacture is indicated by the two facts, that the Duke of Devonshire is Chairman of the Directors of this Company, and that a city of 25,000 inhabitants has sprung up with Chicagoan rapidity, in the past few years, around the Barrow furnaces. The New York agents for the Barrow rail are C. Congreve & Son, Nos. 104 and 106 John-st.

The Cammell steel rail was the first laid in the United States, and about 27,000 tons have been imported for the following roads:

Pennsylvania Central (estimated)	7,500
Hudson River	5,000
New York Central	1,000
Erie	3,000
New York and New Haven	4,500
Boston and Providence	1,000
Lehigh and Susquehanna	3,000
Other roads (estimated)	2,000
Total	27,000

The Cammell rails have stood the test most admirably, and the claim of the New York agents, W. Bailey Lang & Co., No. 54 Cliff st., that these rails are "as good as any," has been fully substantiated. The Lehigh and Susquehanna road, from Easton to Mauch Chunk, a distance of 35 miles, was entirely laid at the outset with these rails, and is the only road of the kind in the United States, the steel rails on other lines being used in relaying tracks originally of iron, and no

such track, as yet, having been wholly replaced with steel.

The fourth great English steel rail making establishment is that of John Brown & Co., which has furnished the United States with 51,000 tons of steel rails, or more than the other three works combined. The importations for the last four years are about as follows, in round numbers: 1866, 10,000; 1867, 12,000; 1868, 17,000; 1869, 14,000. About 200 tons of these rails have just been purchased for the Sixth avenue Railroad in this city, and are now lying in heaps along the upper part of the line, from the Central Park to the company's office at Forty third street. This is undoubtedly the first instance in which steel rails have been adopted on a horse railroad.

All of the English steel rails mentioned above are undeniably of excellent quality, and it cannot be said that any one of them has any marked superiority over the others. The President of the New York and New Haven Railway Company instituted a test last Winter at Bridgeport, in which two iron rails were placed 2½ feet apart on a solid wooden platform. On these bearings a first class iron rail, made at Worcester, was laid and shivered into fine pieces by the 1,550 pound weight of a pile driver falling on it from a height of 20 feet. The same weight was then dropped from a height of 34 feet on each of the steel rails, and neither of them was even cracked. In view of the result of this experiment, the New York and New Haven Company resolved and openly proclaimed that they would hereafter buy the steel rail that could be had for the least money, inasmuch as they were fully convinced that any one of the rails tested would be abundantly strong and durable for all practical purposes.

Steel rails are now in use on nearly all the railways running out of New York, and in some of them to a large extent. There will be 20,000 tons of such rails on the Hudson River road by the end of October, 5,000 tons being laid this season. Two hundred miles, or two-thirds of its entire track, will then be laid with steel, and the remaining third will doubtless be renewed with the same metal inside of two years. On the New York and New Haven road there will be about 6,000 tons of steel rails by the end of the season, nearly half of them being put down this year, and the company have publicly stated their determination to make all renewals of tracks hereafter with steel rails only. On the Harlem road there are 1,500 tons of steel rails. On the New Jersey roads they have been introduced to a considerable extent, and the last report of the New Jersey Railroad and Transportation Company says: "It is probable that steel rails will gradually be laid the entire length of the road, the greater durability of these rails overcoming the objection to their increased cost. It is also noteworthy that a prominent gentleman, officially connected with all the New Jersey Railroads, is now in Europe for the purpose, it is strongly surmised, of thoroughly investigating this whole question of steel rails. On the Erie road there are nearly 9,000 tons of steel rails in use. One thousand tons of John Brown rails were laid three years ago, and are just as good, to all appearances, as when put down. Three thousand tons of the same manufacture, and 3,000 tons of Cammell rails, have been down a little more than a year. There are also 1,000 tons of Troy rails, about 800 tons of Guest rails, and 40 tons of Krupp's cast steel rails, making an exact total of 8,840 tons.

This year the Erie Company is not laying a single solid steel rail. It is putting down, instead, about 2,000 tons per month of iron rails re-rolled at Elmira, and about 1,200 tons per month of steel headed rails made at Trenton, with old iron rails for the base, and a cap of puddled steel welded to this, and forming about one-third of the height of the rail. About 6,000 tons of these have been laid since last November, and very diverse opinions are expressed concerning them. A prominent official connected with the road admitted to an importer of solid steel rails in this city that they were "giving out in all directions." On the other hand an agent of the manufacturers, after careful inspection, found in the whole lot less than a dozen rails that showed flaws or defects of any consequence. The truth undoubtedly is, judging from the essential nature of the case, and from European experience, that these steel headed rails are better than iron rails, but much inferior to rails of solid steel, and the public must judge for itself whether the Erie Company is to be commended or justified for renewing its track with anything but solid steel rails, when the traffic on that road, as its officers are proud to say, tries the rails as severely as on any road in the world. A quantity of steel headed rails made at Rochester, and ingeniously contrived so that the action of the wheels tends to fasten the cap more firmly to the base, have worn well for two years past on the track of the New York Central; and some enthusiasts have maintained that such rails are even better than those of solid steel, inasmuch as the hard steel cap furnishes the required wearing surface, while the tough iron base affords a surer resistance to the downward pressure of passing trains than brittle steel possibly can. This is a point still in dispute, but the general opinion of practical men is indicated clearly enough by the fact that in Germany, where all kinds of rails have been thoroughly tested, steel rails are guaranteed for twelve years and steel headed rails only for five.

Despite the great stride in advance which we are making this year in the laying of steel rails, we are still behind many European countries in this respect. France, Belgium, Germany, and Holland have already laid them extensively, and even Russia has over 70,000 tons engaged for the present year. Immense quantities are also going to the East Indies, the great Indian Peninsula Railway alone having ordered 32,000 tons within the last two years. This tardiness on the part of the United States is owing largely to the higher rates of money in this country. The price of a ton of steel rails at the mill in England is about £12 in gold, which amounts, with the 45 per cent. duty and the cost of transportation, to £19 in gold, equal at the recent rates to about $130 in currency; whereas good iron rails may be had for $85, and poor ones for considerably less. In fact, the failure of many roads to introduce steel is not the worst of it. They will not even use good iron. "It is the hardest thing in the world," as a sagacious dealer lately remarked, "to sell a good rail; but if we had 25,000 tons of miserable bars, as worthless as they are cheap, we could sell them in a week. Plenty of Southern and Western roads are sending on here for wretched 50 and 52 pound iron rails, when their tracks ought to be laid at the very least with 60 pound rails." Such conduct is culpable, but perhaps natural. The projectors of a new railroad aim, of course, at getting the track down and in running order as soon as possible, and not one in a hundred is content to make haste slowly and use the best materials. When the road gets into operation, a dividend must be declared to satisfy the stockholders; and then begins the grand difficulty that lies today in the way of using steel rails, and is well illustrated by the story of an agent who sold 1,000 tons of Cammell rails to a New England road, and called a year later to learn how they had turned out. "O, admirably," said the President, "and we want another thousand tons, but—listen!" In the next room a stockholder, who had just received his yearly dividend and counted it carefully, was heard to exclaim, in a tone of annoyance, "Only $200! Why, I had $250 last year! What's the matter? Is the road running down?" "Oh, no," was the instant response, "but we have been spending a good deal of money for steel rails lately." "Steel rails, eh?" rejoined the stockholder; "I don't know about that. I guess iron rails are good enough; any how, I want my $250 next time," and the speaker retreated with an ominous frown on his countenance. "There," said the President, "that's the trouble; and although we want the rails at once, *that* compels us to defer buying them until next year." The conviction is daily gaining ground among railroad men that it is a "penny wise, pound foolish" policy to continue the use of iron rails, and shrewd managers will not much longer hesitate to cut down dividends, if necessary, for a few years, in order to supply the public with a safe, as well as cheap and speedy, railway transportation.

The great advantage of steel rails lies in their homogeneity. An iron rail, or a steel headed rail, is made of a pile of bars heated and welded together, but a solid steel rail is rolled from a single ingot, and consequently is subject to wear only, whereas the others are exposed to "wear and tear," and the "tear," as any one must know who has ever noticed the battered, laminated, and disintegrated condition of iron rails, on a much used track, is a most serious consideration. So great is this advantage that a single steel rail has been known to outwear no less than 23 iron rails placed successively in the same track, and it is perfectly safe to say that any good solid steel rail will outlast a dozen rails of iron. The argument that steel rails are worthless when once worn out never had much force, and is now entirely upset by the discovery of the Martin process, by which old steel can be re-worked with perfect ease. And the grand objection that steel is brittle, and, therefore, steel rails must break, is now fully overthrown by actual experience. Of course steel rails may be made so brittle as to be worthless, and it is well ascertained that punching holes in them has a most injurious effect; but this process is now discontinued, and it is certain that rails rolled from good Bessemer steel and drilled, instead of punched, are not only far more durable, but are at least as tough as the best iron rails.—*N. Y. Tribune.*

☞ The Cincinnati and Zanesville Railroad, extending from Zanesville to Morrow, 132 miles in length, together with other property and franchises, including the franchise to be and act as a corporation of the Cincinnati and Zanesville R. R. Co. in the State of Ohio, will be exposed for sale at public vendue, in the city of Cincinnati on the 1st of December. The minimum price fixed by the Court is $1,003,968.

☞ The Monongahela *Republican* says that the Monongahela Valley Railroad project is by no means abandoned. A proposal is now being elaborated before the Directory to be acted upon, sometime in January next, which will guarantee the vigorous prosecution of the work along the whole line next summer.

☞ The sections of the Providence and Boston Railroad where steel rails have been used having proved to be a success, the company has just ordered five hundred tons of German steel rails, similar to those which have been effectively proved to be more serviceable and safer than the ordinary rail.

☞ Messrs. W. J. Budd & Co., are the contractors for the construction of the Little Rock and Fort Smith Railroad. They are of the opinion that the twenty miles can be graded by the 1st of January. About 31 miles are now ready for the cross ties.

☞ Upon the recommendation of the Secretary of the Interior the President has accepted a section of sixty-three miles of the Western Pacific Railroad, and ordered the bonds due on account of the construction thereof to be issued to the company.

☞ Hugh Riddle, Esq., has been appointed General Superintendent of the Chicago, Rock Island and Pacific Railroad, Vice John F. Tracy, Esq., resigned.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A dash (—) across the column signifies "nil," and running dots (.....) signify "not ascertained." Land Grant Railroads are printed in *"Italics."* State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterisk* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, November 6, 1869.

Stock Exchange and Money Market.

A more active movement has been reported in money, particularly toward the close, and rates have been quoted stronger, the final quotations having been 6@7 per cent. on call, and from 9@15 per cent. per annum, in the discount line. The demand has been more general and more urgent, while lenders, especially on private account, have been less liberal of accommodation, owing in part, to the severe decline in Stock values, and the consequent disturbance of confidence in railway and miscellaneous share property, as collateral. The West and Northwest have been calling for more extensive supplies of currency, but have not been very generously responded to. At Chicago and Cincinnati, unusually financial stringency, and depression in general business have been experienced of late, and the prospect of early relief is not considered as being very encouraging. Our city banks add largely to their resources, last week, reporting an increase of over five millions of deposits and 2⅛ millions of specie, with a gain of $140,279 of legal tender notes. They enlarged their loan and discount average, about 1⅛ millions, while reducing their circulation $68,186. The U. S. Sub-Treasury closed the week and month with a general balance of $94,689,062, against $89,364,391 at the close of October. The coin reserve of the Treasury Department on the 1st inst., was $116,994,712, of which the Sub-Treasury office here held $81,712,740. Of the amount, the sum of $28,781,520 was represented by outstanding coin certificates. The currency balance of the Department was $7,248,295, including $5,997,182 in the Sub Treasury here.

The specie reserve of the city banks according to the latest return is $21,926,046, against $10,620,526 same time last year. The city bank deposits are now $180,828,882, against $181,948,547 week ending Oct. 31, 1868. The legal tender reserve amounts to $52,177,883, against $51,590,948 same time last year. The circulation now stands at $34,136,249, against $24,253,210 same time last year. The loans are now $250,948,833, against $262 365,869 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged about $90,075,108 a day, against a daily average of $96,918,877 the preceding week, and $89,065,044 the week ending with Oct. 16, 1869. The current week's exchanges average about $112,500,000 a day. The city banks, last week, reported a gain of $2,526,345 of specie, $5,029,963 of deposits, and $140,279 of legal tender notes. They increased their loans, $1,553,760; and reduced their circulation, $68,186.

The city bank exchanges on Wednesday were $132,494,807.

National Bank notes to the amount of $231,460 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $318,718,691, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $18,993,036, leaving, with the existing 1,620 banks, (having an aggregate capital of $422,659,260,) an actual circulation at this date, of $299,725,655. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,455,950; and for the public deposits, $19,558,000—making a total of $362,013,950. The Treasury Department last week redeemed and destroyed $421,100 of worn and mutilated fractional currency, and issued $1,323,000 of new. The outstanding amount of fractional currency on the 1st of Nov., was $37,035,442, against $33,601,299 on the 1st of October, 1869.

The U. S. Sub-Treasury receipts, week ending with Oct. 30, were $8,081,874 in coin, (including $2,420,000 from customs duties,) and $5,818,504 in currency; payments, $10,885,733 in coin, (including $6,594,932 of coin interest,) and $5,286,698 in currency; balance at the close of the week, $94,689,062, (including $81,712 740 of coin, and $5,997,182 of currency,) against $91,766,639 at the close of the preceding week, showing an increase of $2,922,423. The business of the Office on the first two days of the current week, was as follows: On Monday, receipts, $462,328 in coin, (including $282,772 from customs,) and $180,475 in currency; payments, $753,002 in coin, (including $1,012,000 of coin interest,) and $387,060 in currency. On Tuesday, receipts, $1,051,632 in coin, (including $474,000 from customs,) and $397,578

in currency; and payments $730,655 in coin, (including $713,421 of coin interest,) and $258,028 in currency. The balance at the close of business on Tuesday stood at $96,445,167, (including $6,280,287 of currency, and $81,743,043 of coin,) against $91,209,913 a week previous; and $91,892,477 on Oct. 19, 1869. The aggregate receipts of the office in Oct. were $58,880,083, including $11,194,159 from customs; aggregate payments, $53,555,362, including $7,715,080 of coin interest.

The outstanding amount of coin certificates on the 1st of Nov. was $28,731,520, against $24,412,720 on the 1st of Oct., 1869. The Sub-Treasurer at this port, last week, retired $2,095,192 of coin certificates through the receipts for customs.

Government revenues yielded moderately, last week, in both forms. The excises yielded about 3¼ millions; customs at the port of New York, $2,198,192, and at the outports about $750,000 (in coin) more, making the grand total income for the week equal to about $7,008,944 in currency. The receipts from excises, thus far in the current fiscal year, commencing with July 1, 1869, have been about 61 millions.

Gold has been offered much more freely, and has been further depressed in price, the range having been from 127@129⅛, and the closing quotation on Wednesday was 127⅛. Government marketed a million of Gold on Friday last at from 128.51@128.53, and another million on Tuesday of this week at from 127.38@127.79. Government will sell eleven millions of gold, and buy in ten millions of bonds during the current month of November. The customs demand for coin has been on a reduced scale, while the export drain has been very moderate. The coin interest disbursement, through the U. S. Sub-Treasury, since our last, have been nearly eight millions of dollars.

The coin balances of the Government at this port on Wednesday morning, amounted to nearly 81¾ millions.

The customs of the port on Wednesday yielded $413,000. The U. S. Sub-Treasury disbursed $586,073 of coin interest, on that day.

The customs demand for Gold last week, averaged $366,365 a day; thus far, this week, it has averaged $435,500 a day, or equal to a weekly aggregate of $2,613,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $13,900, and since Jan. 1, $14,771,836, against $6,326,932 same time in 1868. The total customs revenue of the Government, in coin, at this port, since Jan. 1, 1869, has been $113,442,993, against $102,287,433 same time in 1868. At San Francisco, from Jan. 1, to Oct. 21, 1869, $6,880,550, against $6,989,341 same time last year.

The exports of specie, from this port, last week, were $684,653, against $1,072,407 same week last year; total, since Jan. 1, 1869, $29,248,688, against $67,942,601 same time last year. Government disbursed last week through the U. S. Sub Treasury here, on account of the coin interest on the public debt $6,594,992, and since Jan. 1, 1869, $76,939,086, against $63,870,609 same time in 1868. The specie exports from San Francisco, from Jan. 1, to Oct. 21, 1869, were $31,716,012, against $29,827,173 same time in 1868.

Foreign exchange has been held with considerable firmness, though the supply has been fair, and the inquiry very moderate. Bankers' prime sixty day bills on London closed on Wednesday at 108¾@108⅞, and on Paris to 5.21¼@5.16¼; sight bills on London to 109¼@109½, and on Paris to 5.15¾c.@5.14⅜. The offering of produce bills has been more liberal this week. The week's exports of domestic produce have been to the currency value of $4,132,157, making the total since Jan. 1, 1869, $164,255,751, against $138,621,082 same time last year.

The U. S. Treasury receipts from customs at all ports from July 1, to Oct. 30, were about 63½ millions.

The amount of specie sent east by railroad from San Francisco, thus far, this year, has been $5,278,917.

Government securities have been in better supply, and less request at generally reduced prices, notwithstanding the favorable debt statement of Nov. 1, which showed a further net liquidation in October of $7,351,608, and since March 1, of $64,197,034. Government bought in on Wednesday, two millions of U. S. 5-20s, at 112.60@113.12 net. The general market closed tame and weak.

U. S. sixes of 1881 closed here on Wednesday at 118@118⅛; U. S. Five-twenties of 1862, ex-coupon, 115@115⅛; U. S. Five twenties of 1864 at 112⅛@112¾; U. S. Five-twenties of 1865 at 113⅛@113¼; U. S. Five-twenties of 1865, consolidated, 115⅜@115⅝; U. S. Five-twenties of 1867, 115⅜@115⅝; U. S. Five-twenties of 1868, 115¼@115½; U. S. Ten-forties at 107⅜@107⅝; U. S. Six per cent. currency bonds, 107¼@107½.

* Ex Nov. 1, coupons.

Railway and miscellaneous share property has been pressed for sale at much lower and irregular prices, on a less active speculative movement. The later dealings showed more steadiness. The consolidation of the New York Central and Hudson River roads has been finally agreed upon. The capital arrangement is made upon the basis of the present separate issues of the stock of the two companies, viz.:

289,000 shares Central	$28,900,000
161,000 shares Hudson	16,100,000
Together, in stock	$45,000,000
In scrip:	
80 per cent. old and 27 per cent. new on Central	$31,315,000
85 per cent. on Hudson	13,685,000
	45 000,000
Stock and scrip, equal dividends	$90,000,000

The time for finally capitalizing the scrip has not been fixed, but the whole of the scrip, including the outstanding 80 per cent. of Central, becomes a consolidated obligation to pay the same dividends as the stock, on the opening of the Consolidated Books, and the separate stocks of the two roads can be made Consolidated stock, share and share alike. But before such consolidation an extra division of one per cent., (equal to $1 80 on the stock with the scrip attached,) will be paid to the holders of New York Central.

General business has shown less animation and less firmness in prices. Middling upland cotton closed heavily on Wednesday at 26@26⅛ cts. per lb. The stock of cotton now here is given at about 17,000 bales. The receipts at the port this week, have averaged about 8,850 bales a day. The receipts at all the ports, thus far in the year commencing with Sept. 1, 1869, have been 424,500 bales, against 320,000 bales in 1868–'9; exports, same time 166,500 bales, against 91,750 bales same time in 1868–'9; stock on hand at latest dates, 168,750 bales, against 154,500 bales same date 1868. The exports of domestic cotton goods from this port, since Jan. 1, have been 18,337 pkgs., against 21,246 pkgs., same time last year. From Boston, 6,537 pkgs., against 7,533 pkgs. same time in 1868.

At the Live Stock markets, this week, Beeves have been in very moderate demand, at from 8@16c., per lb.; week's receipts, 8,109. Milch cows rule dull, at $40@$110 each, receipts, 116. Veal calves in slack request at from 4@13½c. per lb.; receipts, 1,991. Sheep and lambs inactive at from 4@6c., and 7@9c. per lb.; receipts, 31,906. Swine in more request at 9¾@10¾c. per lb., all live weight; receipts, 21,061.

The week's dry goods imports were valued at $1,630,309, and of general merchandise, $2,422,111, making an aggregate for the week of $4,052,420 specie value, against $3,611,633 same week last year.

The ocean freight market has been less active, and rates have been quoted lower. For Liverpool we quote flour at 2s. 4½d.@2s. 6d. by sail, and 2s. 9d.@3s. by steamer, per bbl.; grain at 7¾@8d. by sail, and 8½@9d. by steamer, per bushel; cotton at ¼d. by sail, and ½@$\frac{9}{16}$d. by steamer per lb.; and heavy goods 20s.@30s. by sail, and 55s.@60s. by steamer, per ton. Total number of vessels in port on Wednesday, 417.

The New York exports, exclusive of specie, for the week ending Nov. 2, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$3,121,997	$4.132,157
Prev. reported	135,499,085	160,123,594
Since January 1	$138,621,082	$164,255,751

The imports for the week ending October 30, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,073,811	$1,630,309
Gen. merchandise	2,537,852	2,422,111
Total for the week	$3,611,663	$4,052,420
Previously reported	208,055,771	248,480,380
Since January 1	$211,667,434	$252,532,800

The balance in the Sub-Treasury on Wednesday was $98,375,833 81.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Alabama 8s, 90½; Louisiana 6s, Levee bonds, 60; Georgia 7s, 91½; South Carolina 6s, new, 68; Brooklyn 6s, Water Loan, 98; Toledo, Peoria and Warsaw 1st mort., W. D., 79½; Toledo, Wabash and Western consol. bonds,

Hon. Jesse L. Williams.

The friends of the Grand Rapids and Indiana Railroad are greatly encouraged with the management of its affairs under its present officers. The resignation of Mr. Williams, as United States Director of the Union Pacific Railroad, is also an indication of "business." Mr. Williams has been identified with and acknowledged a leading spirit of the Grand Rapids and Indiana Railroad; and, at present, is the Receiver and Chief Manager of that road, its speedy construction being entrusted to his hands. He finds it impossible to give to both offices the attention justly expected of him. His obligations to the Grand Rapids Road make it out of his power either to attend the meetings of the Union Pacific road at so distant a point as Boston, or to visit the road as required. Under these circumstances he considered it proper to give the Administration a chance of appointing another in his stead. In 1864 Mr. W. received his first appointment as Government Director from Mr. Lincoln, and each successive year has been re-appointed, being the only member of the old board that President Grant retained. He was one of the Locating Committee of the Pacific Road, and personally took part in examining the passes and routes across the Rocky Mountains, and after assisting in the completion of the first railroad over the continent, he retires with the well merited esteem of the government for valuable services rendered.

☞ The Fort Wayne, Muncie and Cincinnati Railroad is completed for 18 miles south of Fort Wayne, and will probably reach Bluffton, seven miles further, by the 10th of November.

☞ The Suncock Valley (N. H.) Railroad was opened from Suncock to Epsom on the 1st inst.

☞ CHICAGO, DANVILLE AND VINCENNES RAILROAD COMPANY'S 7 PER CENT. GOLD BONDS pay annually, on an investment of $10,000 in currency, $698 25 IN GOLD, while only $475 are derived from $10,000 invested in Government Sixes.

$2,500,000 First Mortgage Sinking Fund Bonds, forty years to run, on 140 miles of road, or LESS THAN $18,000 PER MILE.

Starting at Chicago, the Road runs through the richest lands of Illinois, along the line of Indiana, and from which the local business, bound to this road, is estimated to net $733,000, or nearly THREE TIMES THE SUM required for interest and sinking fund on the WHOLE ISSUE OF ITS BONDS.

It forms part of the SHORTEST LINE FROM CHICAGO *via* Terre Haute, Vincennes, Evansville and Nashville to New Orleans, &c., and opens to the Chicago market rich ORE AND COAL BEDS, sufficient of themselves to insure large earnings.

It also brings the BRAZIL COAL MINES nearer to Chicago by 90 MILES THAN ANY other line.

Total cost of construction and equipment estimated at $4,500,000.

$2,100,000 of stock subscribed, which pays for right of way, grading, bridging, &c.

WHOLE AMOUNT OF IRON ALREADY OBTAINED.

From Chicago to Momence, 55 MILES, NOW OPEN TO BUSINESS, and a considerable part will be finished this autumn.

Pamphlets in more complete detail, with maps, can be had of us on application.

Purchasers may obtain Bonds through our advertised local agents, who will be responsible for their safe delivery, or directly of us, express charges prepaid, the buyer remitting $950 and 7 per cent. in currency interest from October 1, to date, funds current in New York. Any of the Eight Hundred Banks in correspondence with the National Park Bank of New York, will receive and transmit purchase money for these Bonds, and in return receive the Bonds direct from the bank and deliver to the purchaser.

Having personally examined this entire line of road, finished and projected, as well as the country through which it runs, we offer these bonds with entire confidence in their value and soundness.

W. BAILEY LANG & CO., Merchants,
No. 54 Cliff st., New York,
Agents for the sale of the Bonds.

Union Patent Stop Washer.

A desideratum appears to be obtained in the Patent Stop Washer advertised in our JOURNAL; it is so simple, and yet so effective, combining the essentials of all improvements, while it cannot be expensive. The fish joints of railways, now generally adopted, are only useful so long as they are kept perfectly tight; and by the jarring of passing trains, unless the nuts are secured, are constantly getting loose. This Washer appears to be just the right thing in the right place; it is so plain that the wonder is, it was not seen long since.

☞ The last rail of the New York and Oswego Midland Railroad, completing the line between Oswego and Norwich, Chenango County, was laid on the 1st inst.

Imports of Dry Goods.

The imports of foreign dry goods at New York for the month of October, were :

Jamestown and Franklin Railroad.

The Pittsburg *Chronicle* says that the Jamestown and Franklin Railroad is to be completed next summer, from Jamestown to Ashtabula, Ohio. The grading for the proposed extension was completed some time since and about all that remains to do is to build the culverts and lay the ties and rails. A large force is now at work on the bridge over French Creek, and that important portion of the work will soon be out of danger from floods and bad weather. Should the proposed extension be made, as is now contemplated, it will give the oil county another outlet to the lakes.

Journal of Railroad Law.

RAILROAD COMPANIES—LIABILITY FOR DAMAGE CAUSED BY FLYING SPARKS FROM DEFECTIVE ENGINES.

The facts of the late case of the Illinois Central Railroad Company *vs.* McClelland (42 Ill., 355,) are fully and clearly stated in the following opinion by

BREESE, J.—This was an action on the case brought in the Marion Circuit Court, by Samuel McClelland against the Illinois Central Railroad Company, and verdict and judgment for the plaintiff.

The record is brought here by appeal, and various errors assigned, the most important of which we have considered.

All the evidence is in the record, and it fully sustains the finding of the jury upon the third count in the declaration. We have often decided that it is negligence in a railroad company failing to provide all the most approved appliances to arrest sparks issuing from the smoke stacks of the engine. There was no proof that the engine which threw the sparks into the plaintiff's meadow was provided with any means by which they might have been arrested. Indeed, it is shown by the testimony of some of the engine drivers sworn on behalf of the defendant, that an engine thus provided, will not throw sparks one hundred feet, though the wind might carry them twenty or thirty feet. Now, as this meadow was one hundred feet from the track of the road, and the sparks were thrown into it by an engine running upon its road, the conclusion is irresistible, that the engine had not the proper appliances. Another engine driver says, a wood spark might be carried one hundred feet, coal would not. Another says, if the sparks went one hundred feet, he would lay it to the wind, and if no wind, then he would think the engine poor, or that something was out of order. Taking either view the company was liable, because they should not run "poor engines," or those out of order. If they do, they must be held liable for all casualties occasioned thereby.

It is proved, as a general fact, that this company had in use, on their engines, the most approved apparatus known for arresting sparks, but no witness stated that this particular engine had it, and the inference is strong it could not have had it if the testimony of the engine driver is to be credited.

To rebut the testimony of these men, three other witnesses were called by the plaintiff, who stated, that they had seen, in 1864, the year this accident happened, engines of the company throw sparks over one hundred feet. As rebutting testimony, this was right, and the Court properly overruled the objection to its reception, and the motion to exclude it from the jury. On the evidence the verdict was right.

As to the instructions, the first one asked by the defendant was this: If the defendant has shown to the satisfaction of the jury that the company was, at the time of the fire, using on all their engines the best known appliances to prevent the escape of sparks, then the defendant would not be liable, although the jury may believe, that by accident, the engines might occasionally get out of order during a trip. If the defendant used the best means at command, and employed competent servants they have done all the law requires.

This instruction the Court gave, after modifying it by striking out the words "although the jury may believe that, by accident the engines might occasionally get out of repair during a trip." To this modification the defendant excepted.

If for no other reason, then for this, the modification was perfectly proper and necessary because there was no evidence to that point. The jury are to believe nothing but what is testified to, and there was no testimony that this engine had met with an accident on the trip.

The second instruction is on the hypothesis that it was the duty of the plaintiff's son and servant, under the circumstances, to endeavor to extinguish the fire.

This has reference to the fire in July, and the injury caused by that fire may be the one for which the jury found the verdict; at any rate, it must have been a part of the finding, in view of the damages assessed. It was then a proper subject of inquiry by the jury, could the plaintiff's son and servant, by the exercise of reasonable diligence, have prevented the spread of the fire? He saw the fire in time to arrest its progress, or at any rate in time to make some effort to that end, but did not choose so to do. He left the scene and was absent near one hour, and on his return, the fire had reached the meadow. Common prudence required he should have made some effort to prevent this, and it was negligence on his part, for which the plaintiff is answerable, that he did not. The fire in the meadow, in July, may be charged to the negligence of the plaintiff's son, who was in a position to have prevented it. The Court should have given this instruction to the jury, and it was an error to refuse it.

As to the third instruction, it would have been entirely proper in the Court to have told the jury, as there were three counts in the declaration, that the plaintiff must make a case by the proof, to fit one or the other substantially. But we do not think the plaintiff was confined to the proof of the precise place where the fire originated, the gravamen of the action being, loss by fire occasioned by the negligence of the defendants, and whether that fire commenced on the right of way in the first instance, and then spread to the meadow, is not very material.

The third count was sufficiently established. It is a very strong presumption indeed, that this particular engine had not sufficient spark arrester, and having none, the defendants are liable for the injury done by it. For refusing to give the second instruction the judgment must be reversed, and the cause remanded. Judgment reversed.

Chenango and Allegheny Railroad.

We understand that the Chenango and Allegheny Railroad have made arrangements with the Erie and Pittsburg management to have the junction of the roads at the present station on the E. and P. at Greenville, instead of a mile this side, as was originally intended. This will prove of great convenience to the traveling public. The contractors of the road have finished their job for the season (from Greenville to the vicinity of Mercer.) As it is, some valuable coal mines have been reached, and the transportation of the mineral duly begun.—*Pittsburg Chronicle.*

Portchester and Ridgefield Railroad.

The route of the Portchester and Ridgefield Railroad, the survey of which is completed, runs through a beautiful tract of country lying between Portchester, in Westchester County, and through the western portion of Ridgefield County, Ct. The road will be twenty-three miles in length. Starting from Portchester, it runs through the village of Pemberton, then passing within a third of a mile of Glenville, strikes a point three miles north of Greenwich, and one and a half miles south of Stanwich, thence passes the south end of Longridge, three quarters of a mile east of Poundridge village, and running through Lewisboro, reaches the north end of Ridgefield, nine miles from Danbury, to which place the road is to be continued.

The road will not, according to the survey, vary one mile from a straight line.

The highest point of the road is at Redfield Summit seven hundred feet above tide water. The heaviest grade of the road will be fifty-eight feet one inch to the mile.

The estimated cost of the road is $672,000, exclusive of right of way. The average cost of the road per mile, equipped, is $29,000. Ground will be broken on the line of the road in about six weeks. It is intended to have the road in running order in about eighteen months from the time of breaking ground.

The road will connect at Portchester with either the Portchester and Harlem or the New York and New Haven roads, to transfer passengers and freight to the city.

Debt of Tennessee.

The following is a full statement of the debt of Tennessee to Oct. 1, 1869, presented to the Legislature now in session:

Bonds loaned to railroads—ante-war.	$13,115,000
Bonds to fund interest thereon—1866.	3,213,000
New bonds to railroads, since war, 1866–'69	13,297,000
Railroad bonds indorsed by State	2,196,000
Total railroad debt	$31,821,000
Bank, capitol, and other debt	3,473,000
Total debt Oct. 1, 1869	$35,294,000
Add July, 1869, interest unpaid	1,100,000
Together	$36,394,000

Represented as follows:

Railroads for bonds and indorsements, as above	$31,821,000	
Due from railroads for arrearages of interest due State	2,806,000	
		34,127,000
State capital, Bank of Tennessee, &c.		$2,267,000
Taxables of the State		223,862,243
Revenues of 1869–'70	$1,878,949	
Less for schools	450,000	
		$1,428,949

McGregor and Missouri Railroad.

This is now the legal name of the road owned and operated by the Milwaukee and St. Paul Company, first organized as the McGregor and Sioux City, and latterly known as the Yankton Division of the Milwaukee and St. Paul. It begins at Calmar, 48 miles west of McGregor, on the McGregor and St. Paul line, is completed about 50 miles west, and is aiming to cross northern Iowa in a westerly direction, to Yankton, the capital of Dakota.

Portland and Ogdensburg Railroad.

This road is located in almost an air line from Portland to Gambo, crossing the Presumpscot at Cumberland Mills and touching the river at Millison's Mills, and at Little Falls, between Cumberland Mills and Gambo. Crossing the river at Gambo the line bears southwesterly to the foot of Sebago Lake. The line then strikes across the Saco river at Steep Falls and the Great Falls in Hiram, reaching these places on the Saco.

All along the line the work is rapidly and satisfactorily progressing, under the contractors, Messrs. Fuller and Harding of Springfield, Mass. The terms of the contract require that the grading on the road from Portland to Sebago Lake must be done by July 1, 1870, and the rails are expected to be laid and the division opened by the fol lowing October.

Some 400 men are at work on the line, the surface grades showing rapid progress, and the deep cuts being opened for winter work. In the first fourteen miles there is no cut deeper than twenty feet, one at Inkhorn Brook, in Windham, reaching this figure. Some 20,000 yards of earth are to be excavated from a long cut at White Rock Hill, in Gorham. The heavy work for winter is all in the last two sections. An embankment, to contain 100,000 yards of earth, is commenced at Great Swamp, in Standish, and will have to be filled. Another embankment across Long Otter Pond will require 64,000 yards of filling. From the swamp to the lake the line runs straight through a broken country, coming out on the lake shore about 12 feet above the lake, or 260 feet above tide water level. The contract is not per mile, but in proportion to the amount of work done, stone excavated, embankments made and earth removed, thus proving a saving to the road. Gen. S. J. Anderson is President of the company, and John F. Anderson Chief Engineer.

Alexandria and Georgetown Railroad.

The work of construction on the railroad to connect Georgetown with Alexandria and the Loudoun and Hampshire Railroad has been commenced, and a large force of workmen has been employed for steady work. The proposed road will be four miles long, and will run along the berme bank of the canal. The work will be under the personal superintendence of Mr. Berkeley Ward, Chief Engineer of the Orange and Alexandria Railroad, who made the preliminary survey. This road is designed to be a connecting link between the Northern and Southern railroads over the Aqueduct Bridge, with the aid of the National Junction Railway, for the building of which road active steps are now being taken.

Pacific Railroad.

The cheap emigrant trains on the overland road have sensibly increased the arrivals of workingmen, and the fast through train recently started will augment the number of capitalists visiting our coast. We are glad to know that the success of the first weekly express train has been such as to suggest the sending of another, giving us two fast through trains weekly between New York and San Francisco.—*San Francisco Bulletin.*

☞ The Los Angeles and San Pedro (Cal.) Railroad has been completed. The opening celebration took place on the 26th ult. This road gives outlet to the ocean to one of the finest valleys in the State.

New York Central and Hudson River Railroad Company.

The agreement for consolidation of the New York Central and Hudson River Railroad Companies was ratified by a vote of the stockholders of both companies at their several meetings in this city and at Albany on the 1st inst. The new company is called the "New York Central and Hudson River Railroad Company." The capital stock of the consolidated company is $15,000,000—$207 per share to the New York Central, and $185 per share to the Hudson River Railroad. Consolidation certificates are provided, and are to be issued at the rate of twenty-seven per cent. of the capital stock held by the Central shareholders and eighty-five per cent. of the Hudson River shareholders. Arrangements are made for the capitalization of the Consolidation certificates, and of the interest certificates issued by the Central Directors. No further increase of the capital stock can be made except on a vote of two thirds of the stockholders. The officers of new company are: C. Vanderbilt, President; William Vanderbilt, Vice President; E. D. Worcester, Treasurer, and Augustus Schell, Secretary.

Loughridge Steam Brake.

An exhibition of the practical use of this brake was recently made on the Erie Railway, under the auspices of the managers and judges of the American Institute. The brake, as described by the *Times*, is designed for steam cars, and is constructed in such a manner as to enable an engineer to stop a train at pleasure, without the aid of brakemen. It is entirely worked by steam, but is easily attached to the ordinary hand brake without dispensing with the latter. It is claimed to possess several advantages over other brakes, chief among them being the saving of time in stoppages and prevention of sliding of wheels, together with its great security against accidents. It is also asserted by Mr. Thos. B. Oakley, agent of the Brake Company, that the motion of an express train can be completely checked in about eighteen seconds by means of the new brake. The brake is now in use on the Morris and Essex Railroad, where it gives great satisfaction.

Pacific Railroad Commission.

The Commissioners of the Union and Central Pacific Railroads have made their reports to the Secretary of the Interior. In concluding, they state that both companies are doing a large amount of work, and are day by day bringing them nearer the standard required by law. This great line, the value of which to the country is inestimable, has been built in about half the time allowed by Congress, and is now a good and reliable means of communication between Omaha and Sacramento. It is well equipped and fully prepared to carry passengers and freight with safety and despatch, comparing favorably in this respect with the majority of first class roads in the United States.

☞ The Dorcester and Delaware Railroad, extending from Seaford, Sussex Co., Del., to Cambridge, in Dorcester Co., Md., a distance of 31 miles, has been completed, and passenger trains will soon commence running regularly. W. Wilson Byrn, of Cambridge, is President; Thomas W. Anderson, Secretary and Treasurer; and D. S. Hessy, Chief Engineer.

☞ The route of the Northern Pacific Railroad will commence at Duluth, at the western end of Lake Superior, and run thence to Seattle, on Puget Sound, a distance of 1,174 miles. The whole distance from the Pacific Ocean at Seattle, to Chicago *via* rail and lake, will be 2,140 miles.

☞ The interest due November 1st on Orange and Alexandria Railroad, and James River and Kanawha Canal Co's bonds, is being paid at Lynchburg, Va. The interest on the first named bonds is $24,000, and on the second $18,000.

☞ The trains on the Yankton Division of the Milwaukee and St. Paul Railway now run through will to New Springs. By the first of January they run twenty miles further. This branch is being pushed forward to the Missouri rapidly.

☞ The last rail on Ben Halladay's Willamette Valley Railroad, in Oregon, was laid on the 29th of October.

☞ The cars are now running on the first five miles completed of the Virginia and Carson (Nevada) Railroad.

☞ The length of railroad to be built between Warren and Belfast, (Me.,) by the late survey, is thirty miles.

PORTLAND AND OGDENSBURG RAILROAD.

Western Division.

Essex County, Montpelier and St. Johnsbury and Lamoille Valley Railroads.

ENGINEER'S OFFICE,
ST. JOHNSBURY, VT., Oct. 7, 1869.

TO RAILROAD CONTRACTORS.

Proposals for the gradation and masonry of those sections of the above roads included between St. Johnsbury and the Lamoille Valley in the town of Hardwick, and also between Swanton and the Lamoille Valley in the town of Cambridge, will be received at the general office of the above companies in St. Johnsbury, up to and including Nov. 20. Much of this is desirable work, and can be prosecuted during the Winter. Contractors are invited to make an early examination before the ground is covered with snow.

The Executive Committee reserve the right to reject bids from irresponsible parties, and all which in their judgment may not accord with the interests of the companies.

By order of the Executive Committee,
ASA C. MITCHELL, Chief Engineer.

PORT HURON AND LAKE MICHIGAN RAILROAD CO., TREASURER'S OFFICE, PORT HURON, Mich., Oct. 14, 1869.

FIRST & PRYIBIL'S
PATENT IMPROVED
BAND SAW MACHINE,
452, 454 & 456 Tenth Avenue,
NEW YORK CITY.

PRICE - - - - $350.
BOXING AND SHIPPING, $10.

This Machine, with the exception of the table, is made entirely of Iron. Its weight is 1800 lbs.; drums 3 feet 3 inches in diameter; height, 8 feet 5 inches; depth 4 feet 3 inches; width 6 feet; driving pulleys usually 14 inches in diameter, or to suit our customers.

Our machine can be run with a speed of 330 to 350 revolutions per minute, causing the saw to travel 3300 to 3500 feet per minute, and with a belt from 4 to 5 inches in width a block of Rosewood from 10 to 15 inches thick, or wood of any kind, hard or soft, can be cut with ease and facility, the saw being from one-quarter inch to one inch in width. A saw one-eighth of an inch in width, including teeth, can be used for cutting wood of considerable thickness.

The saws are not liable to break owing to our improved slide bearing, which adjusts itself according to the expansion and contraction of the saw. No saw will break except by accident or gross carelessness. The same is used principally by railroad car, chair, and other furniture manufacturers, ship, boat, and wagon builders, and also to saw slate, ivory, bone, &c. Guarantee will be given for all we state above. From three to five times as much work can be done with one of our sawing machines, as with an ordinary up and down saw. The work is cut smooth, the saw being retained by an improved guard.

At the present time, Sept. 1869, 64 of our machines are running in this city, and about twice as many in the country.

We also manufacture a lately patented counterbalance oval turning lathe which can be run with more than twice the speed of the old style of lathes, and much more and better work will be done. Many other wood working machines, and also shafting, pulleys, hangers, &c., &c., constantly on hand. Send for Circulars.

Jonathan T. Hobby,
MATHEMATICAL Instrument Maker, Greenwich Street, Hempstead, Long Island N. Y.

NEW YORK CITY STEEL WORKS,

Manufacture every description of Steel—PERFECTLY UNIFORM IN QUALITY—and of very great tensile and compressible strength.
Plates of Cast Steel may be bent COLD to any angle, yet remain capable of being TEMPERED.
Guaranteed EQUAL TO ANY OTHER STEEL manufactured in Europe or the United States.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.
